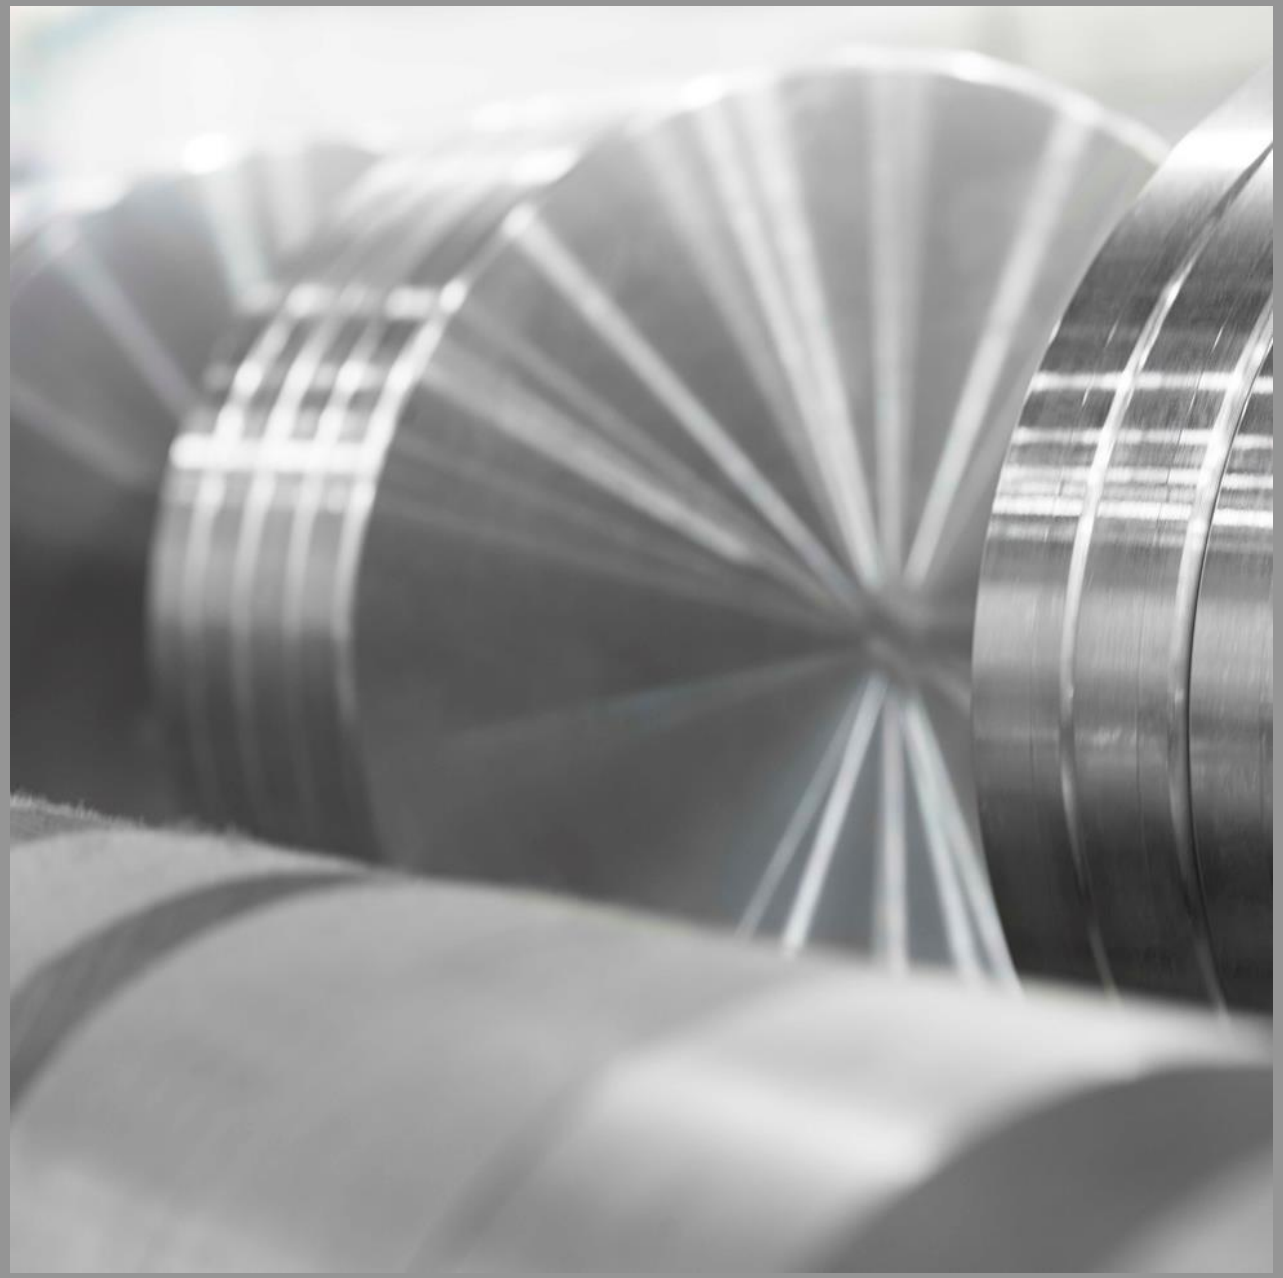
Hydro

First quarter 2024
Investor presentation



April 24, 2024

Table of contents

Cautionary note

Certain statements included in this announcement contain forward-looking information, including, without limitation, information relating to (a) forecasts, projections and estimates, (b) statements of Hydro management concerning plans, objectives and strategies, such as planned expansions, investments, divestments, curtailments or other projects, (c) targeted production volumes and costs, capacities or rates, start-up costs, cost reductions and profit objectives, (d) various expectations about future developments in Hydro's markets, particularly prices, supply and demand and competition, (e) results of operations, (f) margins, (g) growth rates, (h) risk management, and (i) qualified statements such as "expected", "scheduled", "targeted", "planned", "proposed", "intended" or similar.

Although we believe that the expectations reflected in such forward-looking statements are reasonable, these forward-looking statements are based on a number of assumptions and forecasts that, by their nature, involve risk and uncertainty. Various factors could cause our actual results to differ materially from those projected in a forward-looking statement or affect the extent to which a particular projection is realized. Factors that could cause these differences include, but are not limited to: our continued ability to reposition and restructure our upstream and downstream businesses; changes in availability and cost of energy and raw materials; global supply and demand for aluminium and aluminium products; world economic growth, including rates of inflation and industrial production; changes in the relative value of currencies and the value of commodity contracts; trends in Hydro's key markets and competition; and legislative, regulatory and political factors.

No assurance can be given that such expectations will prove to have been correct. Hydro disclaims any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

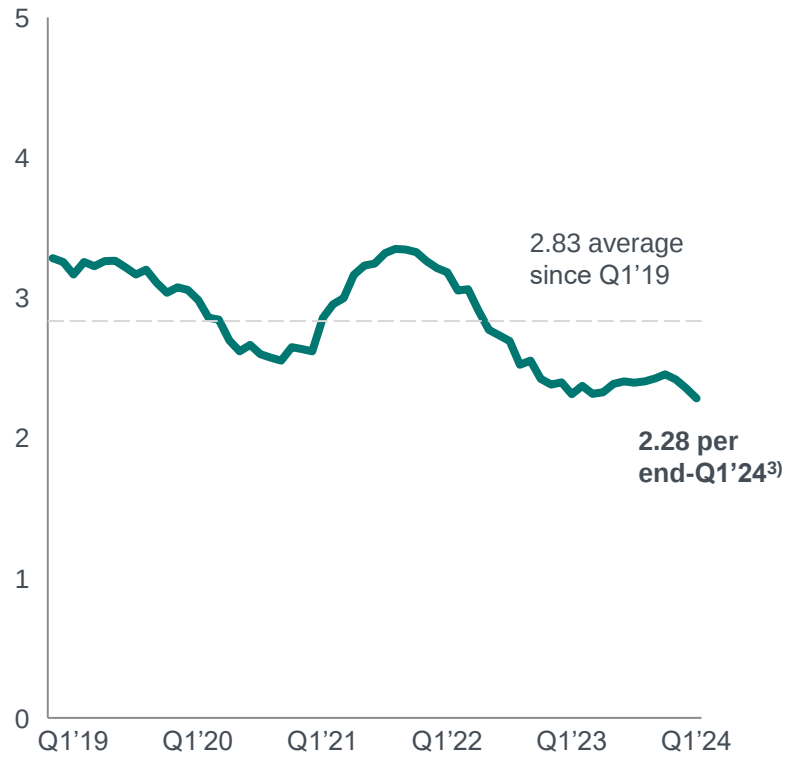
Resilient in weak markets, positioned for growth

Hilde Merete Aasheim
Chief Executive Officer

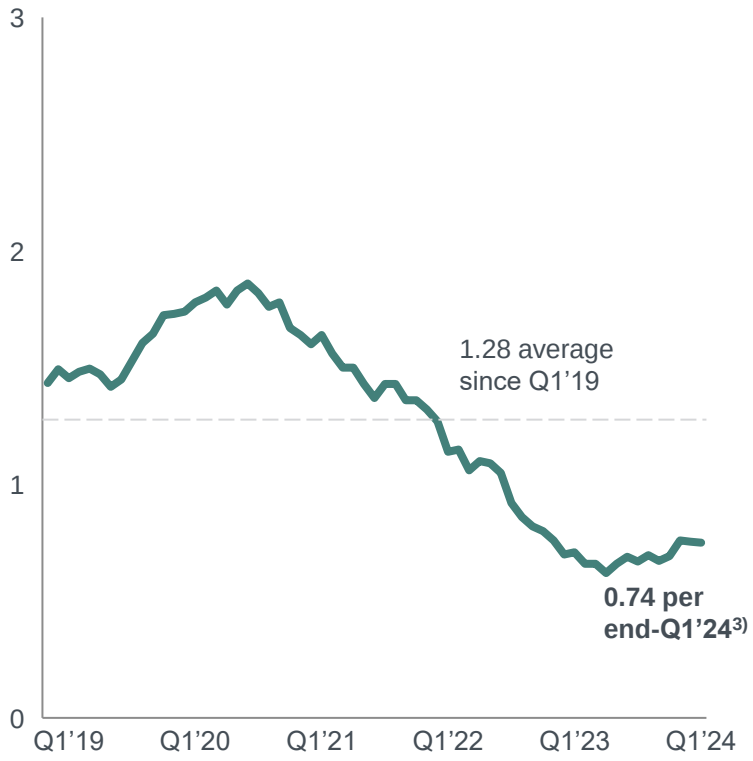
April 24, 2024

Safety our key priority

TRI[1] per million hours worked
12 months rolling average



HRI[2] per million hours worked
12 months rolling average



1) Total Recordable Injuries includes own employees and contractors
2) High Risk Incidents included own employees and contractors
3) Average over period

Q1 2024 highlights | Adjusted EBITDA NOK 5.4 billion

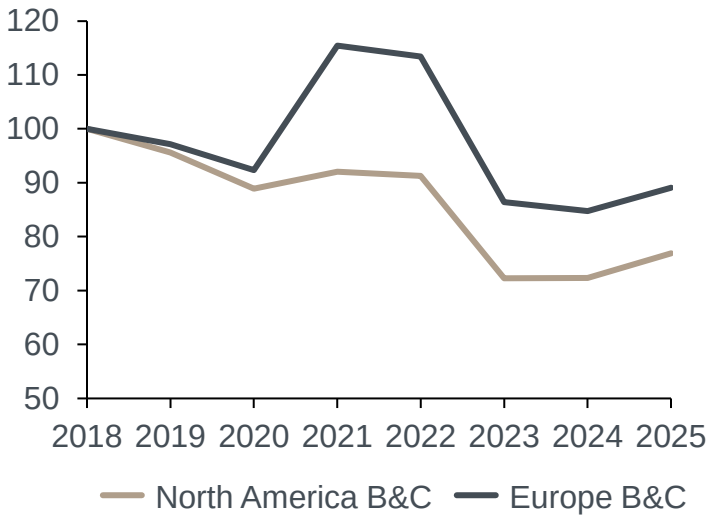
Free cash flow NOK (3.5) billion, adjusted RoaCE 5.6%

- Results down on weaker demand and recycling margins, revenue drivers increasing
- Increasing recycling and post-consumer scrap capacity, supporting greener product offering
- Mendubim and Boa Sorte solar plants in commercial operation, securing renewable power for Hydro
- Hydro Alunorte starts using natural gas, improving profitability and executing on decarbonization roadmap
- CO_2 compensation agreement supporting decarbonization and greener investments

Building & construction easing, automotive production growth moderating

B&C at historical low, improved demand expected

Demand indexed 2018 levels, %



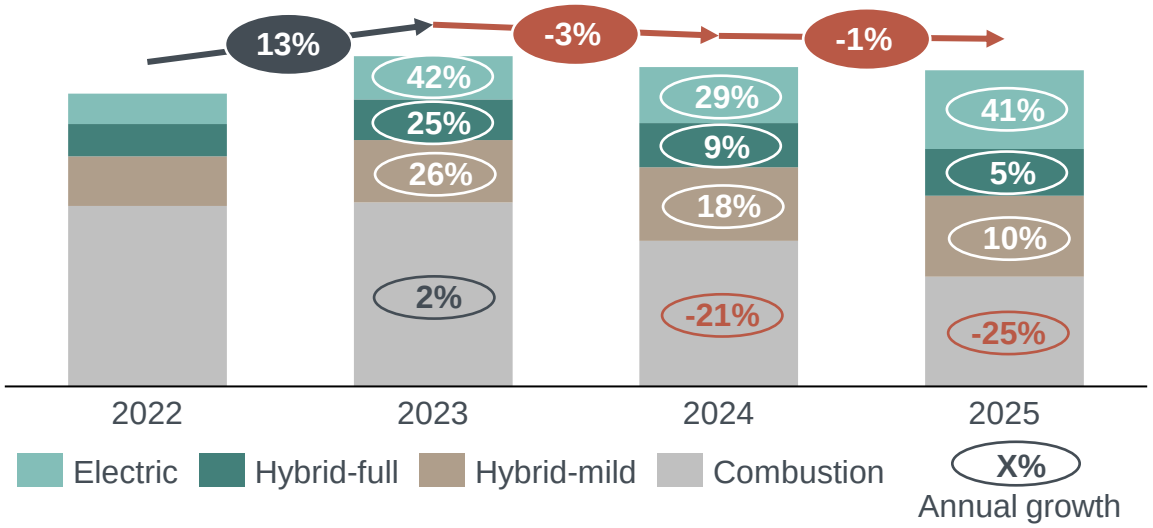
Europe YoY growth, %

	EU	NA
Q1-24	-12.1	
Q2-24	-3.8	
Q3-24	+2.5	
Q4-24	+7.2	
2024	**-2**	**0**
2025	**+5**	**+6**

- Building & construction demand in Europe and North America at historical lows
- Expecting improved demand second half of 2024 and in 2025 as policy interest rates moderate

Automotive production declining in Europe

EU light vehicle production per segment, number of units



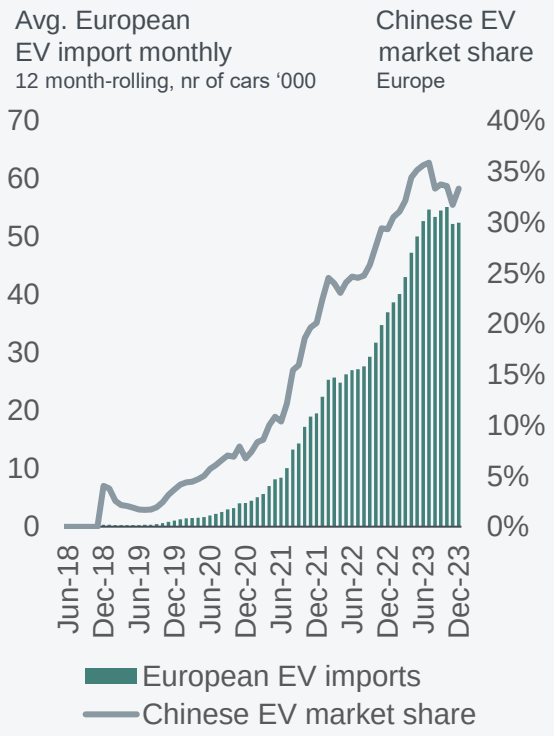
- Overall European automotive production declining in 2024
- EVs + hybrid production still growing, but less than expected and with steep competition from China
- EV growth to further accelerate in 2025

Source: CRU, IHS Markit

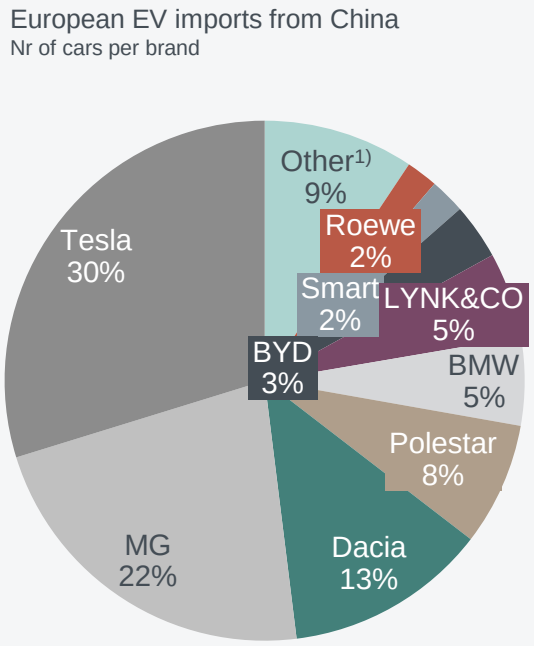
US and EU addressing Chinese EV overcapacity

European small-medium cars seems most at risk

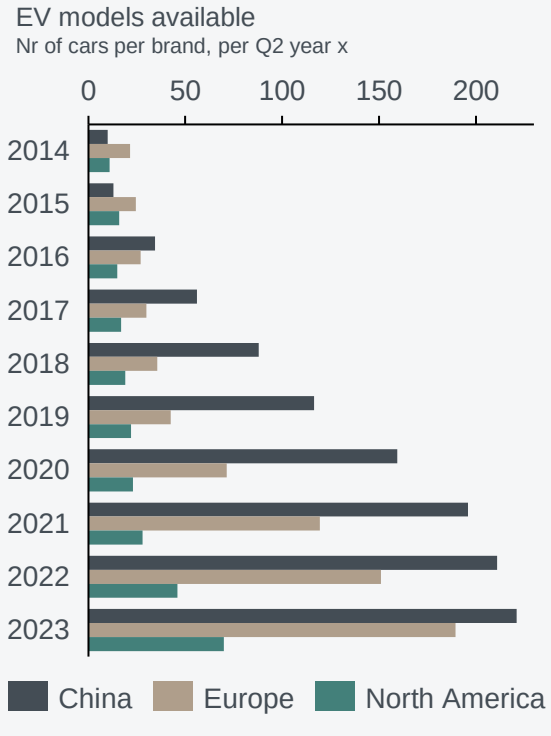
China EV exports to Europe accelerate



Small-medium cars most at risk in Europe

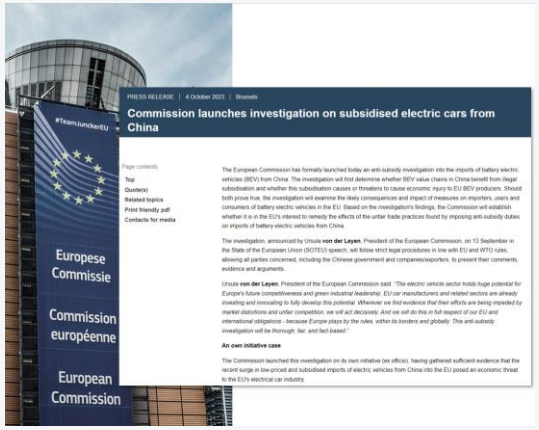


Limited China EV exports to the US



Chinese EV threat to be addressed in Europe

- European Commission launched investigation on subsidized EVs from China on October 4, 2023
- **US with 27.5%** tariff on cars made in China, whereas **9% in Europe**

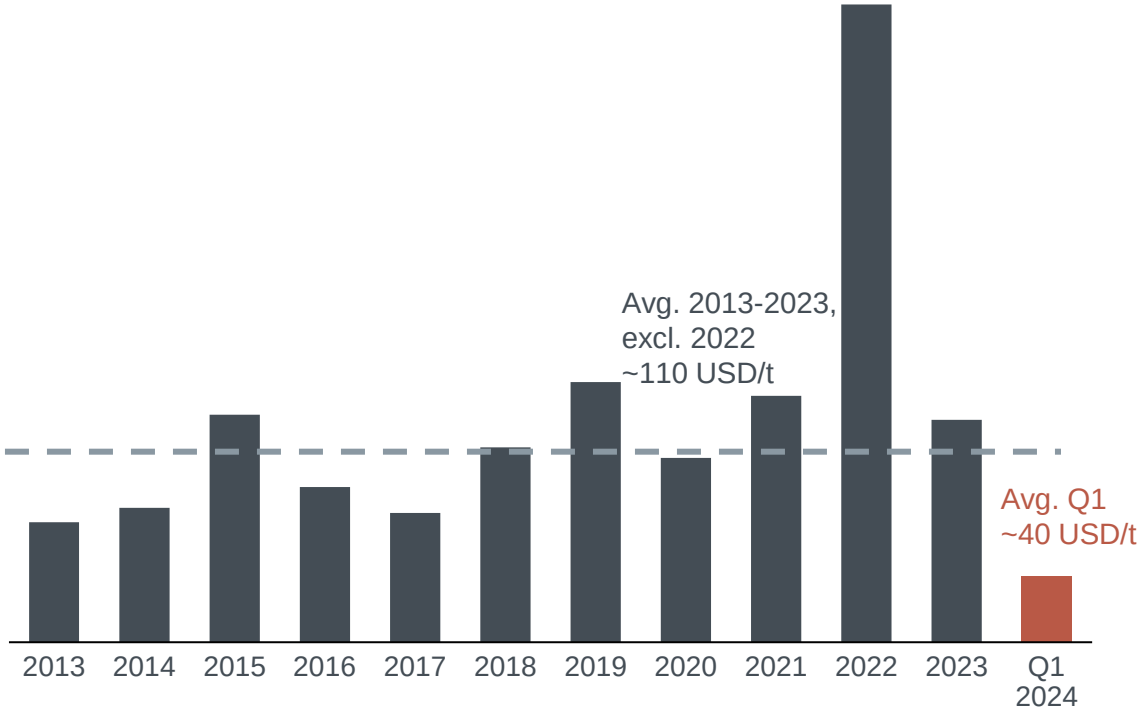


Source: Bloomberg, Eurostat, Hydro analysis, CRU, BloombergNEF
1) Other: Maxus, Citroen, Volvo, Ora, R + some 26 other brands limited car exports

Recycling margins on historical low levels

MM EI Recycling EBITDA margin[1)]

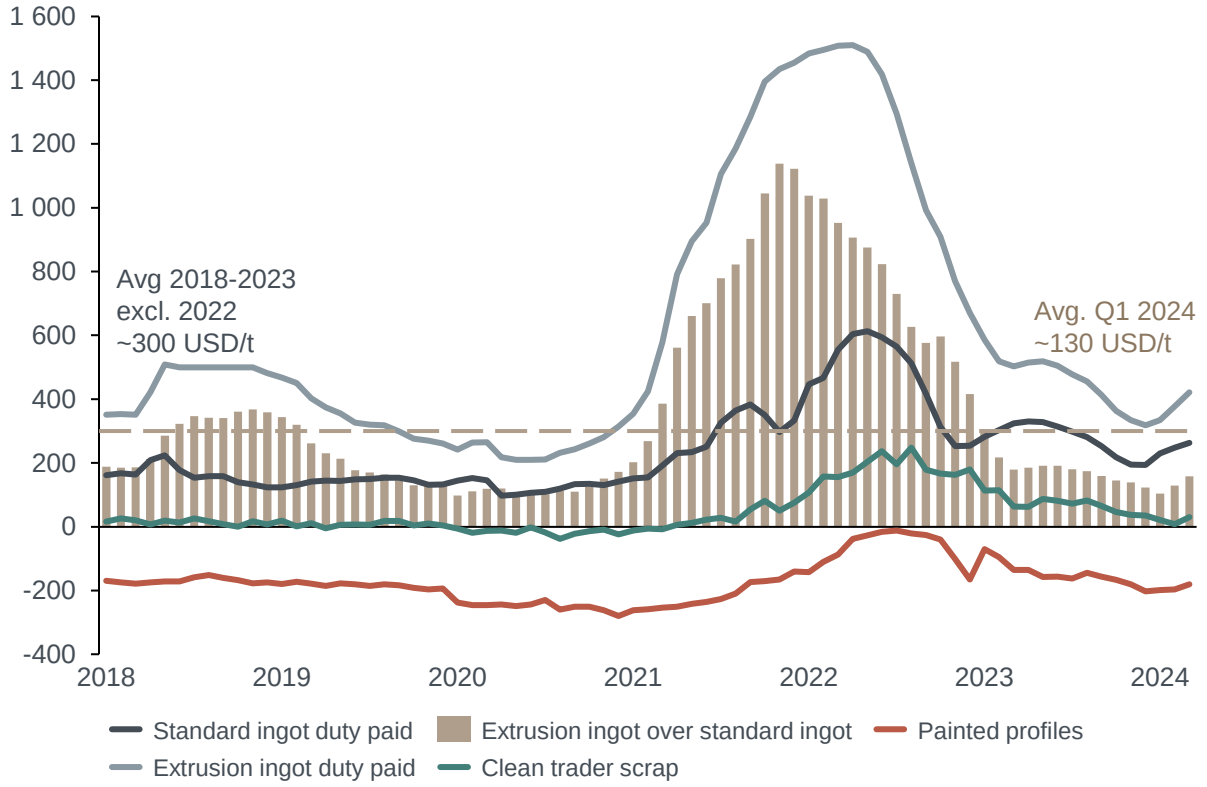
USD/mt, nominal



On the back of weak B&C demand:

Low billet premiums, and reduced construction and demolition activity

Product and scrap premiums, USD/mt



Source:Fastmarkets, MetalBulletin

1) MM Recycling Extrusion ingot portfolio; excluding Alumetal and central costs

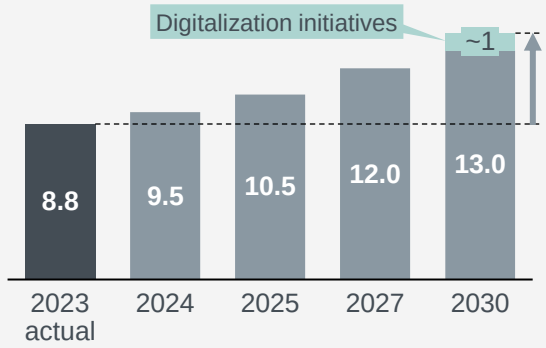
Improvement programs on track

Enhancing robustness, adjusting to markets

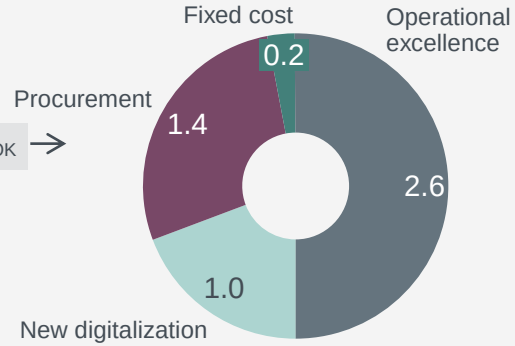
Key improvement levers:

- Improving operational and commercial excellence, enabled by digitalization
- Expanding new products and corresponding margin contributions
- Differentiating the product portfolio and market segments to increase counter-cyclicality
- Leveraging on greener premiums

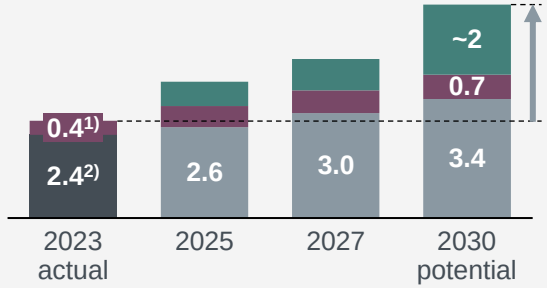
Improvement program **on track**



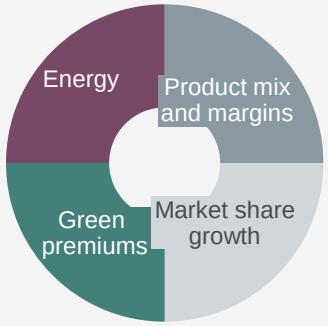
5.2 BNOK →



Commercial ambitions **on track**



~3.3 BNOK →

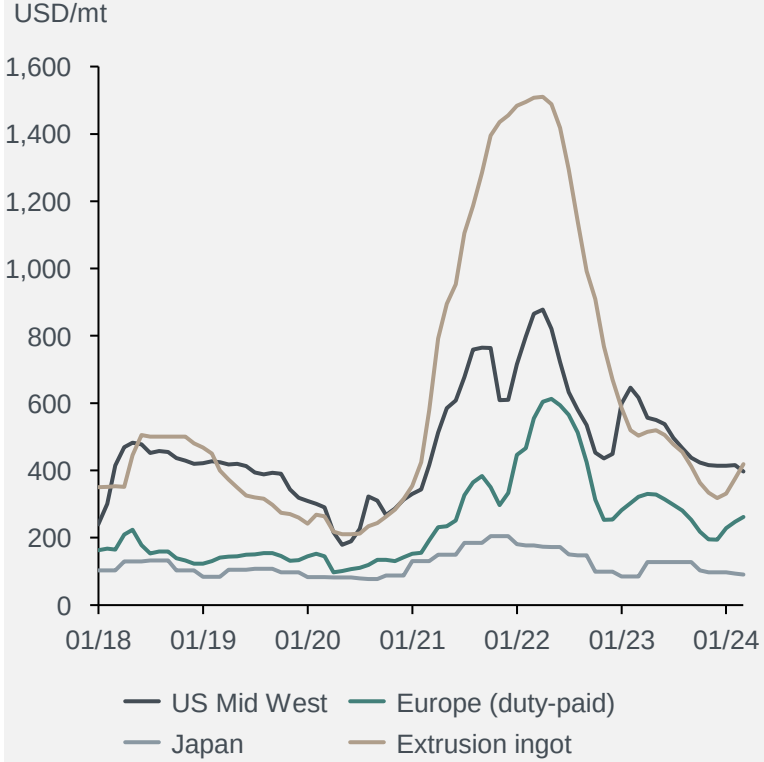


1) Added scope on top of initial target, Energy commercial improvements 2) Including greener premiums
Note: Estimated NOK 1.5 billion in annual average CAPEX to meet remaining improvement and commercial ambitions.

First quarter revenue drivers trending upwards

LME aluminium price

Regional standard ingot premiums



Platts alumina index (PAX)

U.S. and UK sanctions on Russian Metal

New restrictions on trading in Russian aluminium to curb funding of Russian war in Ukraine

- Hydro stopped buying Russian aluminium after invasion of Ukraine in 2022
- Many companies self-sanctioning
- U.S./UK sanctions restrict trade of Russian aluminium on global exchanges (LME/CME), ban physical import for metal produced after April 13
- U.S. and UK sanctions, a step in the right direction from western countries
- Call on the EU to sanction all Russian aluminium in the 14th package

Aluminium growth supported by the green transition and megatrends

Low-carbon to constitute 50-60% of the automotive aluminium demand in 2030

Automotive CAGR 2022-30:

8 - 10%

Solar in EU CAGR 2022-30:

10 - 15%

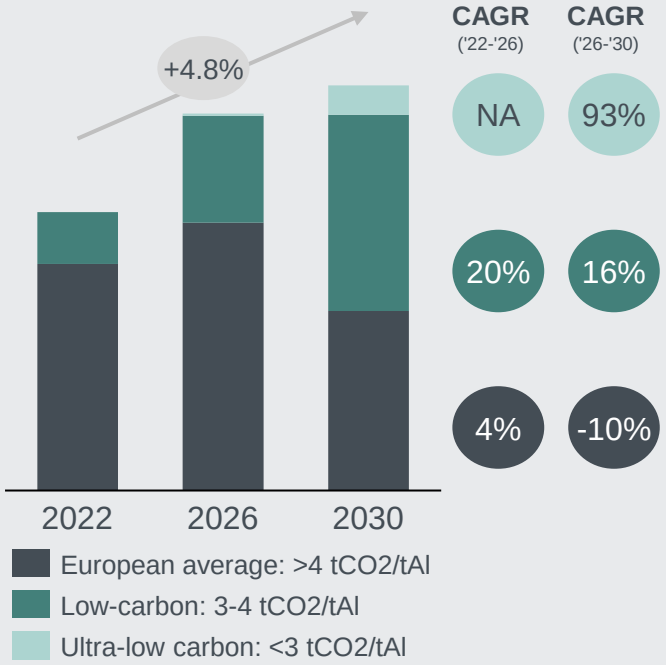
Copper substitution potential, HVAC&R by 2030, million tonnes:

0.6

Expect ~60% of European aluminium demand to be low-carbon[1] by 2030

Aluminium demand on degree of carbon emissions

Figures in gross '000 tonnes Aluminium[2], Europe



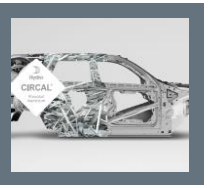
Megatrends supporting greener growth

Innovate for circularity

- Process design – closed loops
- Product design – lower material use
- Reuse and refurbish (second life)

Waste to value

- Reduce waste generation
- Reuse and upcycle waste streams
- Capture and recycle at end of life



Partnering with clients

- Shaping the markets
- Enabling carbon footprint reduction
- Facilitate client branding

Regulatory frameworks

- End-of-life Directive
- EU waste shipment regulation
- Critical raw materials act
- CO_2-regulations

Source: Ducker Group, CRU, BNEF, HIS, McKinsey market analysis (high level estimate), company presentations, Hydro analysis

1) Products with CO2 footprint equal to or less that 4 tonnes CO_2 per tonne Aluminium. 2) Scrap multiplicators from net to gross: SI: 1.625, EI: 1.43, FA: 1.09

Hydro 2030:

Pioneering the green aluminium transition, powered by renewable energy

Key priorities towards 2030

1. Step up growth investments in Recycling and Extrusions to take lead in the market opportunities emerging from the green transition
2. Step up ambitions within renewable power generation
3. Execute on ambitious decarbonization and technology road map, and step up to contribute to nature positive and a just transition
4. Shape the market for greener aluminium in partnership with customers

Continuing to grow recycling position

Widening margins and positioning for long-term growth

- Digging deeper into the scrap pile and securing ***access to scrap***
- ***Diversifying*** product portfolio, exposure to market segments and geographies to increase counter-cyclicality
- Promoting recycling friendly alloys to ***enable higher recycled content***
- ***Differentiating*** with premium and specialty recycled products to secure attractive upcharges
- Pursuing strategic decarbonization ***partnerships*** with customers
- Continuing to ensure ***competitive cost position*** vs peers; leveraging scale advantages and optimizing hot metal cost

Growing recycling and post-consumer scrap capacity in Q1

Hydro Årdal opens new recycling unit

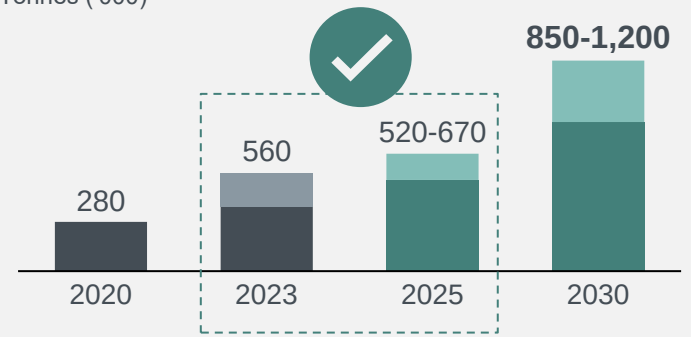
Hydro Høyanger opens new recycling facility

Securing processed scrap in North America with Sims Alumisource

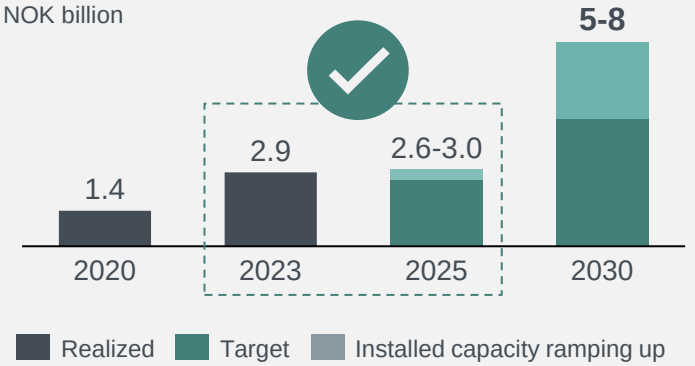
Investing in scrap sorting in the UK, Wrexham

On track to deliver on 2030[1] targets

PCS usage capacity
Tonnes ('000)



Recycling EBITDA
NOK billion

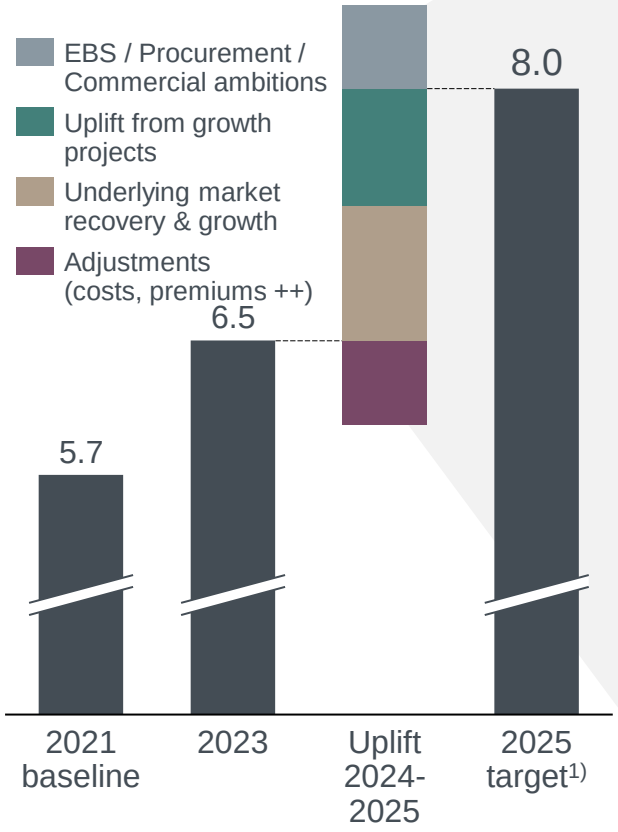


1) Range based on capex. High-range include ~70% of further potential capex given market and M&A. Including Alumetal for July 2023

Extrusions positioning to deliver on NOK 8 billion EBITDA target

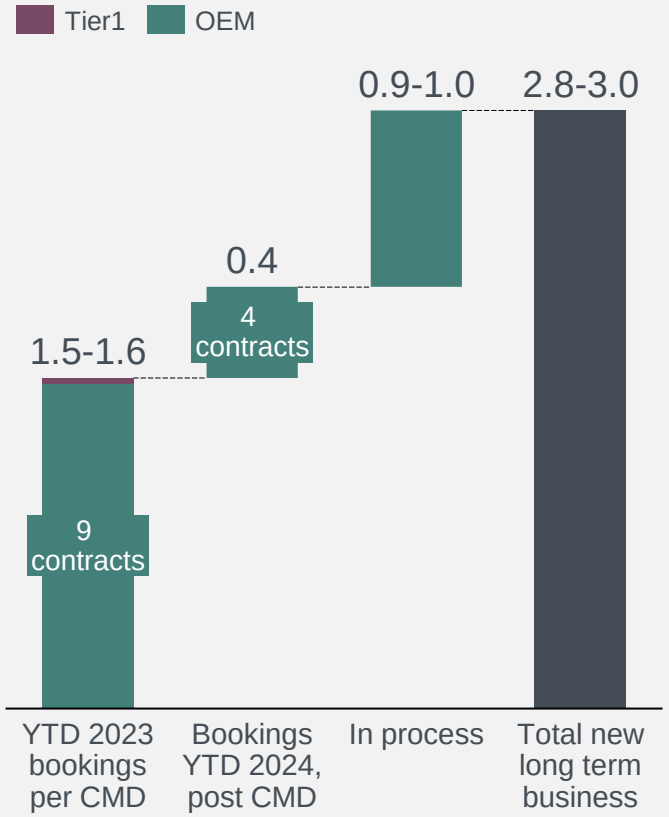
Extrusions EBITDA

NOK billion



Growing with the customers

OEM contracts, revenue EUR billion



Growth capacity invested

Complete

- Hueck M&A
- Navarra recycling
- Sjunnen recycling
- Poland greener press
- Precision Tubing China press

Ramping up

- The Dalles cast (US) - now
- Nenzing press - now
- Rackwitz press - now
- Phoenix press and fabrication - now

Under execution

- Hungary recycling – ramp up Q2/Q3 2024
- Hungary automotive press
- Tønder automotive press
- City of Industry press (US)
- Cressona recycling (US)

1) Target of NOK 8 billion in 2025, in nominal terms.

Powering the green aluminium transition

Securing renewable power for Hydro's portfolio and other industries

Hydro Energy

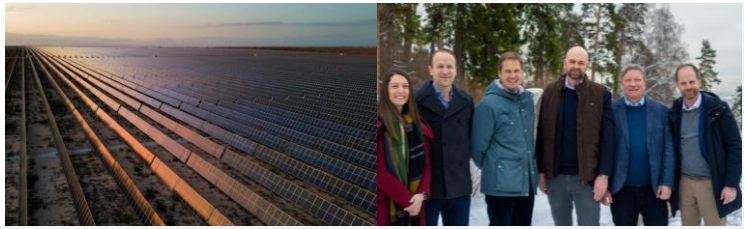
Signing long-term power purchase agreements (PPAs) with Statkraft and Alpiq

- Statkraft contract 1.28 TWh in period May 2024-2027, price area NO3
- Alpiq contract 0.54 TWh in period 2025-2033, price area SE3

Concession application for new hydropower plants in Røldal-Suldal progressing as planned

- In Q4 2023, Hydro and Lyse applied for concession for five new hydropower stations in Røldal-Suldal
- An upgrade and expansion of the current plants could increase capacity by 800 GWh (gross), 650 MW

Hydro Rein



Starting operations on solar projects totaling ~1 GWp in Brazil

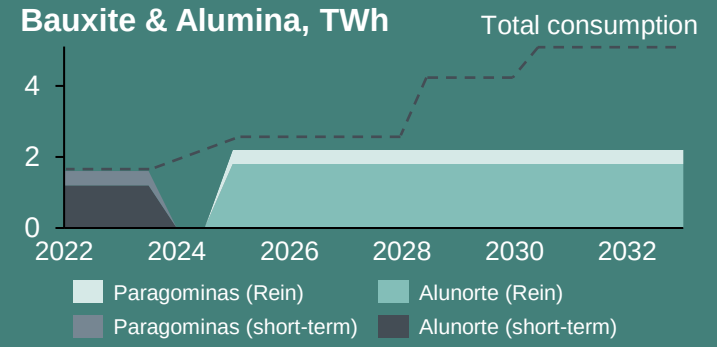
- 531 MWp Mendubim solar plant with 736 GWh PPA to alumina refinery Alunorte
- 438 MWp Boa Sorte solar plant with 815 GWh PPA to aluminium smelter Albras

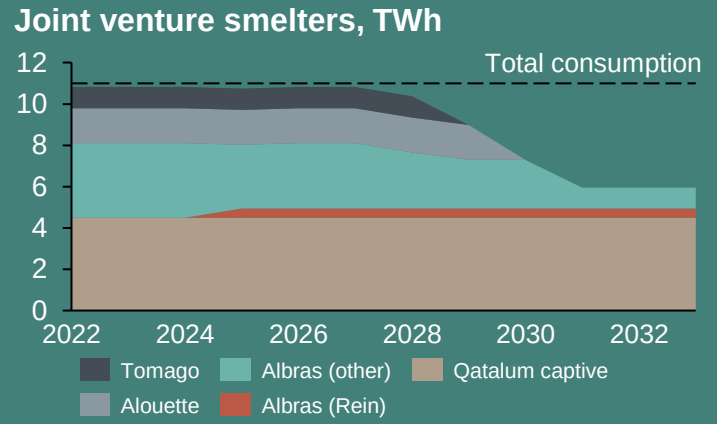
Adding more than 7 TWh potential to early-stage development pipeline in Nordics

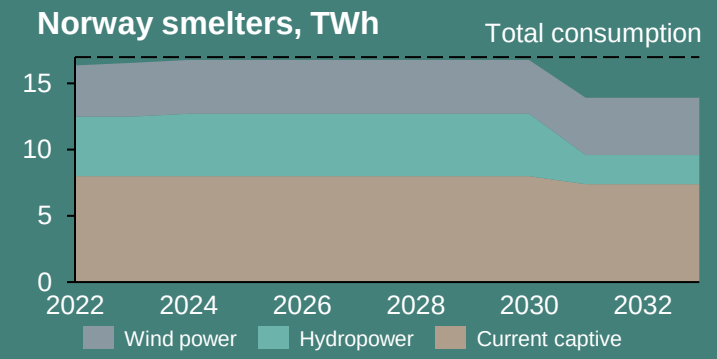
- Acquiring 80 percent stake in a 2.4 GW portfolio of wind power projects under development in Sweden and Norway, from IOWN Energy
- Partnering with Fritzøe Energi to develop renewable energy for industry in Southeastern Norway

Transaction with Macquarie Asset Management progressing as planned, finalized by end of Q2

Power sourcing for Hydro operations







1) Total Alunorte and Paragominas, all consumption sourced through Hydro.
2) Qatalum captive (50%), Alouette (20%), Tomago (12.4%), Albras (51%).

Executing on ambitious decarbonization roadmap

2018

2025
10% carbon emission reduction

2030
30% carbon emission reduction

2050 (or earlier)
Zero carbon emissions

Alunorte fuel switch

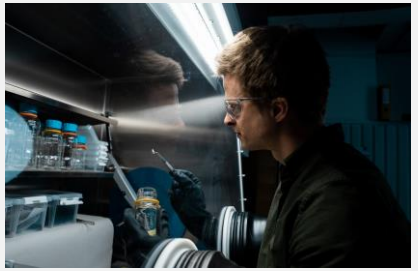
- On March 12, Alunorte started the production of alumina using gas, an important milestone on reaching 30% by 2030

Partnering for decarbonization of calcination

- Partnering with the research center HILT CRC* to further leverage projects and technology for decarbonization of the calcination process of producing low-carbon alumina

HalZero and CCS

- On track with both HalZero and CCS towards industrial pilot
- Stage 2 HalZero test facility in Herøya under construction and on plan



Emission-free plasma and bio-methane in casting

- Emission-free plasma pilot with global potential at Sunndal
- Introduced bio-methane replacing 70% on natural gas at Sunndal.

Founded on renewable energy

*HILT CRC = Heavy Industry Low-carbon Transition Cooperative Research Centre

B&A lifting profitability, driving sustainability

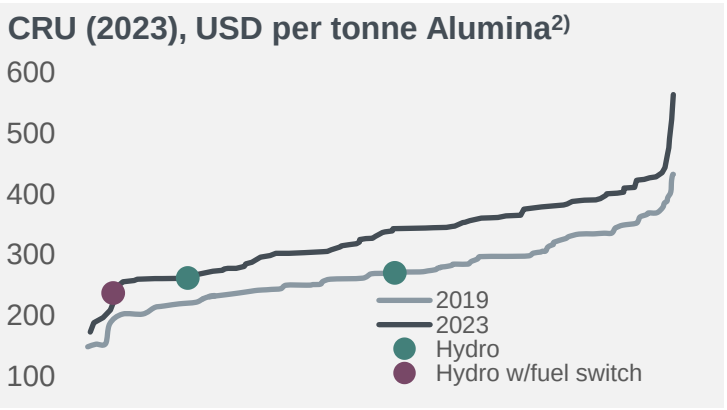
Hydro Alunorte started production of alumina using natural gas supplied by New Fortress in March

Project benefits:

- **USD 160-190 million annual savings when fully implemented[1] (~USD 25 per tonne cash cost saving)**
- **Upon full conversion, 700,000 tonnes reduced CO2 emissions annually**
- **Moving from Brent index (oil) to Henry Hub (gas), reducing price volatility**

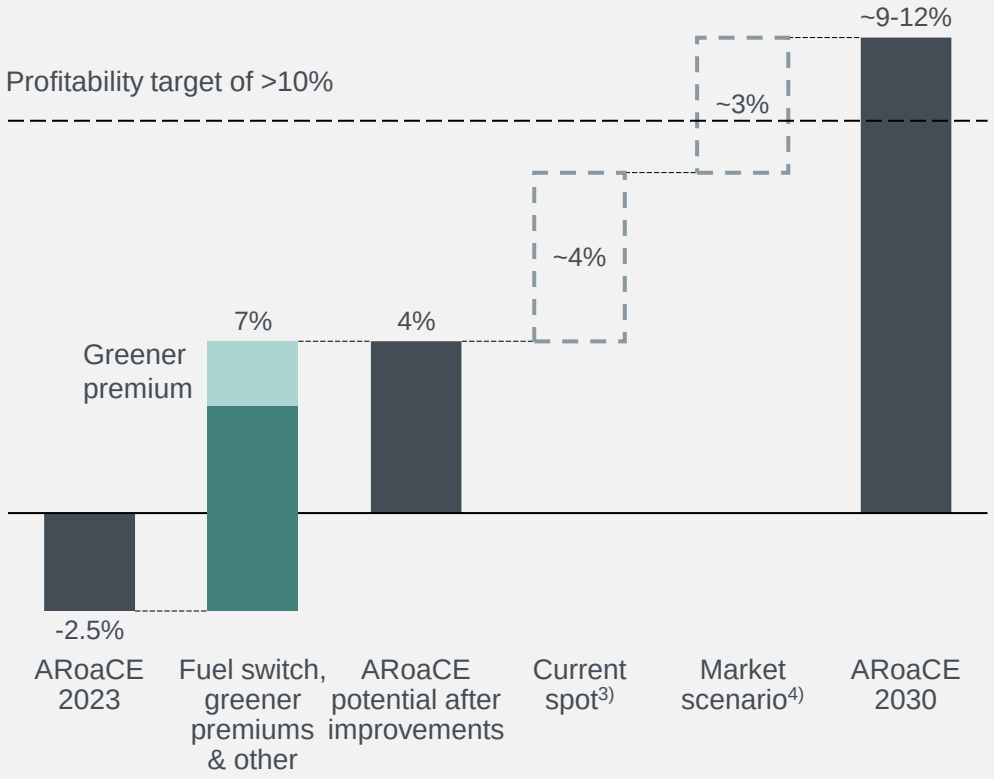
Expected fully implemented within H2 2024

Annual use of gas ~29.5 MMBTU upon full implementation



Roadmap to profitability

Adjusted RoaCE potential 2030



1) USD 160 million on forward prices 2025 (first year of full effect), USD 190 million on spot as of Q1 2023

2) CRU 2023 cost curve. 3) Current market PAX of 377 USD/t versus 2023 PAX of 361 USD/t. 3) External scenario is based on CRU and S&P Global FX assumptions, real 2023 (prices indicated in appendix)

Agreement on the indirect CO_2 compensation scheme

The agreement between industry and authorities will **provide predictability, while supporting decarbonization and green investments**

- Maximum annual compensation for eligible industries of NOK 7 billion[1)]
- 40% of compensation committed to implement emission reduction and energy efficiency measures
- Subject to approval by EFTA Surveillance Authority (ESA) and the Norwegian parliament annual approval as part of the ordinary state budget process

1) Based on current production, it is estimated that Hydro will be eligible for a CO2 compensation of approximately NOK 3.2 billion for 2024, payable in 2025.

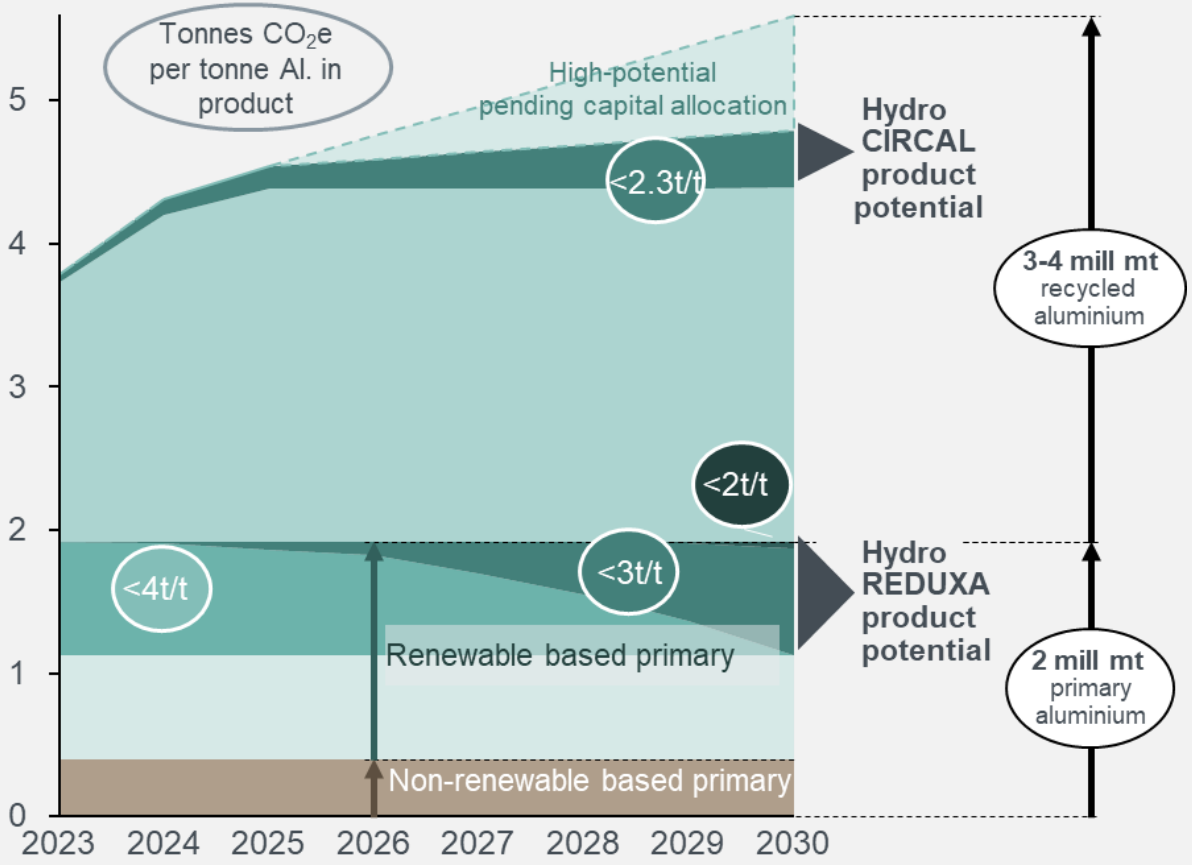
Shaping the market for greener aluminium

Partnering with NKT to decarbonize electricity infrastructure

- To develop a best in class, low-carbon aluminium power cable value chain for the development of Europe's renewable energy grid.
- Hydro's Karmøy plant will deliver low-carbon wire rod to NKT. Going forward, the companies will collaborate on R&D and product development.

Greener earnings uplift potential 2030: NOK 2 billion[1)]

Million tonnes capacity potential



1) Based on 2030 EU ETS cost and relative CO_2 reduction vs Hydro REDUXA 4.0 at current industry traded upcharge. Hydro REDUXA and CIRCAL potential based on estimated certification capacity. Primary capacity based on equity share renewable power. Hydro CIRCAL products have post-consumer scrap content > 75%

Adjusted earnings per share	0.93	1.70	0.50	4.26

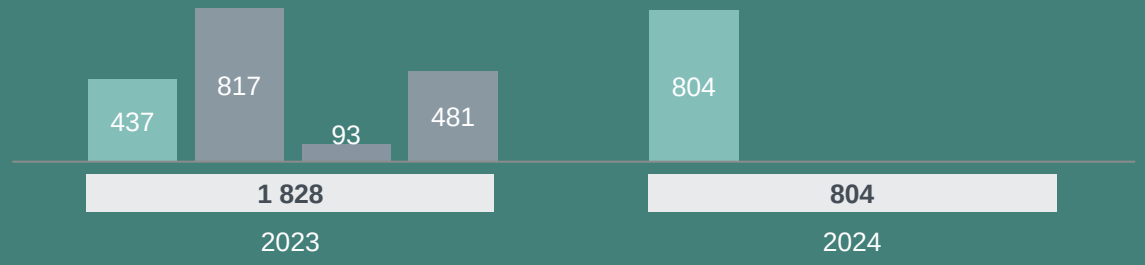
Hydro Bauxite & Alumina

Results up on lower raw material prices, partly offset by lower sales volumes from lower production

Key figures	Q1 2024	Q1 2023	Q4 2023
Alumina production, kmt	1,503	1,550	1,571
Total alumina sales, kmt	2,574	2,171	2,487
Realized alumina price, USD/mt	366	367	349
Implied alumina cost, USD/mt[1)]	337	347	331
Bauxite production, kmt	2,600	2,648	2,771
Adjusted EBITDA, NOK million	804	437	481
Adjusted EBIT, NOK million	43	-221	-269
Adjusted RoaCE, % LTM[2)]	-1.9 %	-0.8 %	-2.5 %

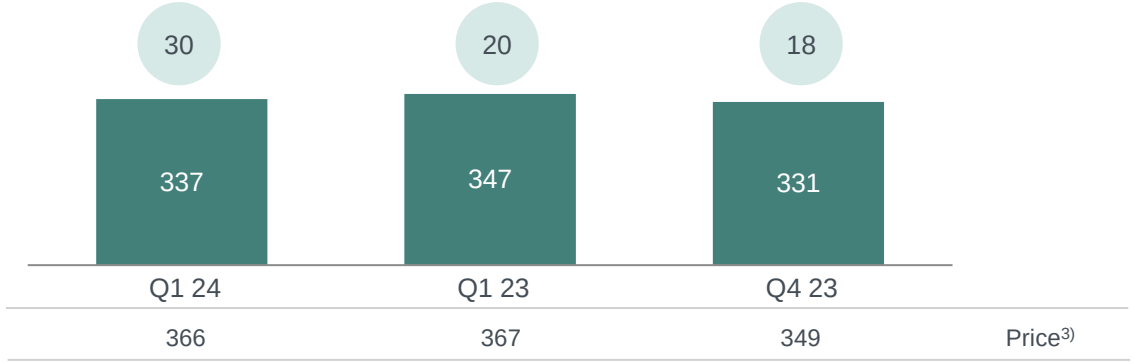
Adjusted EBITDA

NOK million



Implied alumina cost and margin

USD/mt[1)]



Results Q1 24 vs Q1 23

- Lower raw material prices
- Lower production
- Stronger BRL against USD

Outlook Q2 24 vs Q1 24

- Alunorte production around nameplate capacity
- Higher alumina price
- Lower raw material prices

1) Realized alumina price minus Adjusted EBITDA for B&A, per mt alumina sales
2) Adjusted RoaCE calculated as Adjusted EBIT last 4 quarters less 25% tax / Average capital employed last 4 quarters
3) Realized alumina price

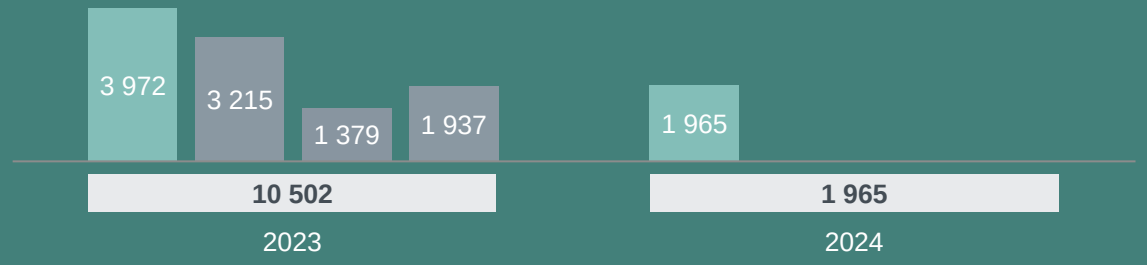
Hydro Aluminium Metal

Results down on lower all-in metal prices, reduced contribution from power sales and increased fixed cost, partly offset by lower carbon cost and positive currency effects

Key figures	Q1 2024	Q1 2023	Q4 2023
Primary aluminium production, kmt	505	499	514
Total sales, kmt	540	559	541
Realized LME price, USD/mt[1)]	2,248	2,291	2,129
Realized LME price, NOK/mt[1)]	23,609	23,566	23,143
Realized premium, USD/mt	358	503	348
Implied all-in primary cost, USD/mt [2)]	2,225	2,275	2,125
Adjusted EBITDA, NOK million	1,965	3,972	1,937
Adjusted EBITDA including Qatalum 50% pro rata (NOK million)	2,470	4,445	2,487
Adjusted EBIT, NOK million	1,306	3,328	1,264
Adjusted RoaCE, % LTM[3)]	10.3 %	32.1 %	13.8 %

Adjusted EBITDA

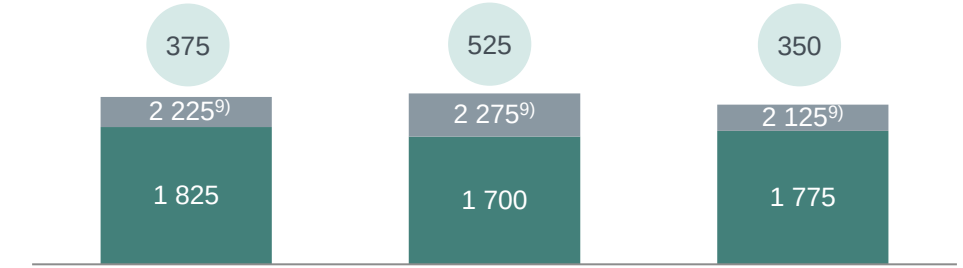
NOK million



1) Includes pricing effects from LME strategic hedge program
2) Realized all-in aluminium price minus Adjusted EBITDA margin, including Qatalum, per mt aluminium sold
3) Adjusted RoaCE calculated as Adjusted EBIT last 4 quarters less 25% tax / Average capital employed last 4 quarters
4) Implied primary costs and margin rounded to nearest USD 25
5) Realized LME aluminium price less Adjusted EBITDA margin, incl Qatalum, per mt primary aluminium produced

All-in implied primary cost and margin

USD/mt[1,4)]



1Q24	1Q23	4Q23	
2 606	2 794	2 477	All-in[6)]
2 248	2 291	2 129	LME
71%	70%	63%	% value add products[7)]

Implied all-in primary cost, per mt [2)] | Implied LME cost, per mt [5)] | All-in EBITDA margin per mt

Results Q1 24 vs Q1 23

- Lower all-in metal prices
- Reduced contribution from power sales
- Higher fixed cost
- Reduced carbon cost
- Positive currency effects

Outlook Q2 24 vs Q1 24

- ~73% of primary production for Q2 2024 priced at USD 2 272 per mt [8)]
- ~47% of premiums affecting Q2 2024 booked at USD ~ 393 per mt. Q2 realized premium expected in the range of USD 350 and 400 per mt.
- Higher raw material and fixed cost
- Higher sales volumes

6) Realized LME plus realized premiums, including Qatalum
7) % of volumes extrusion ingot, foundry alloy, sheet ingot, wire rod of total sales volumes
8) Bookings, also including pricing effects from LME strategic hedging program as per 31.12.2023
9) Excluding power sales Slovalco and Norwegian smelters and CO2 catch-up Q3 2022 and Q4 2023

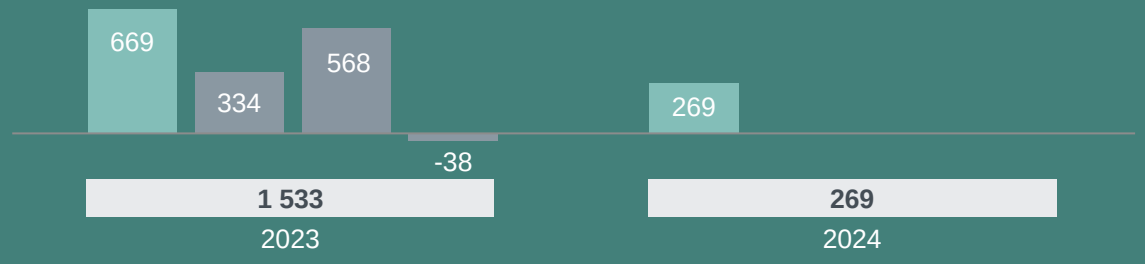
Metal Markets

Results down on lower results from recyclers, and sourcing and trading activities

Key figures	Q1 2024	Q1 2023	Q4 2023
Recycling production, kmt	179	132	166
Metal products sales, kmt [1)]	622	674	645
Adjusted EBITDA Recycling (NOK million)	58	284	58
Adjusted EBITDA Commercial (NOK million)	211	385	-97
Adjusted EBITDA Metal Markets (NOK million)	269	669	-38
Adjusted EBITDA excl. currency and inventory valuation effects	224	592	-36
Adjusted EBIT (NOK million)	68	628	-229
Adjusted RoaCE, % LTM[2)]	5.0 %	26.9 %	10.7 %

Adjusted EBITDA

NOK million



1) Includes external and internal sales from primary casthouse operations, remelters and third-party metal sources
2) Adjusted RoaCE calculated as Adjusted EBIT last 4 quarters less 25% tax / Average capital employed last 4 quarters

Results Q1 24 vs Q1 23

- Main driver is lower results from recycling
- Reduced results from sourcing and trading activities
- Negative ramp-up effects

Outlook Q2 24 vs Q1 24

- Tight scrap markets
- Higher volumes
- Lower impact due to Cassopolis ramp up

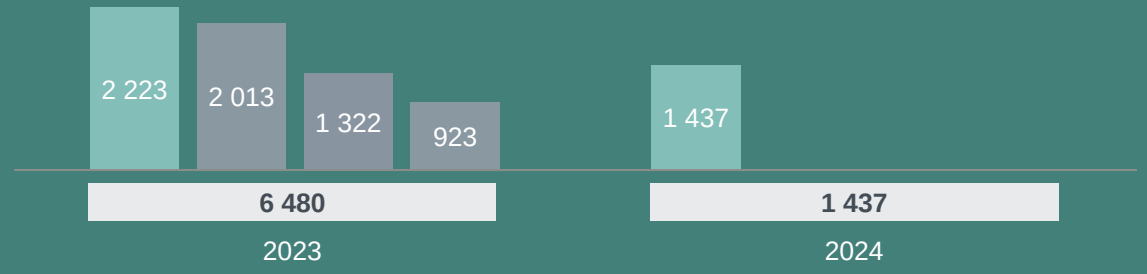
Hydro Extrusions

Results down on lower sales volumes, lower recycling margins and higher costs, partly offset by higher sales margins and currency effects

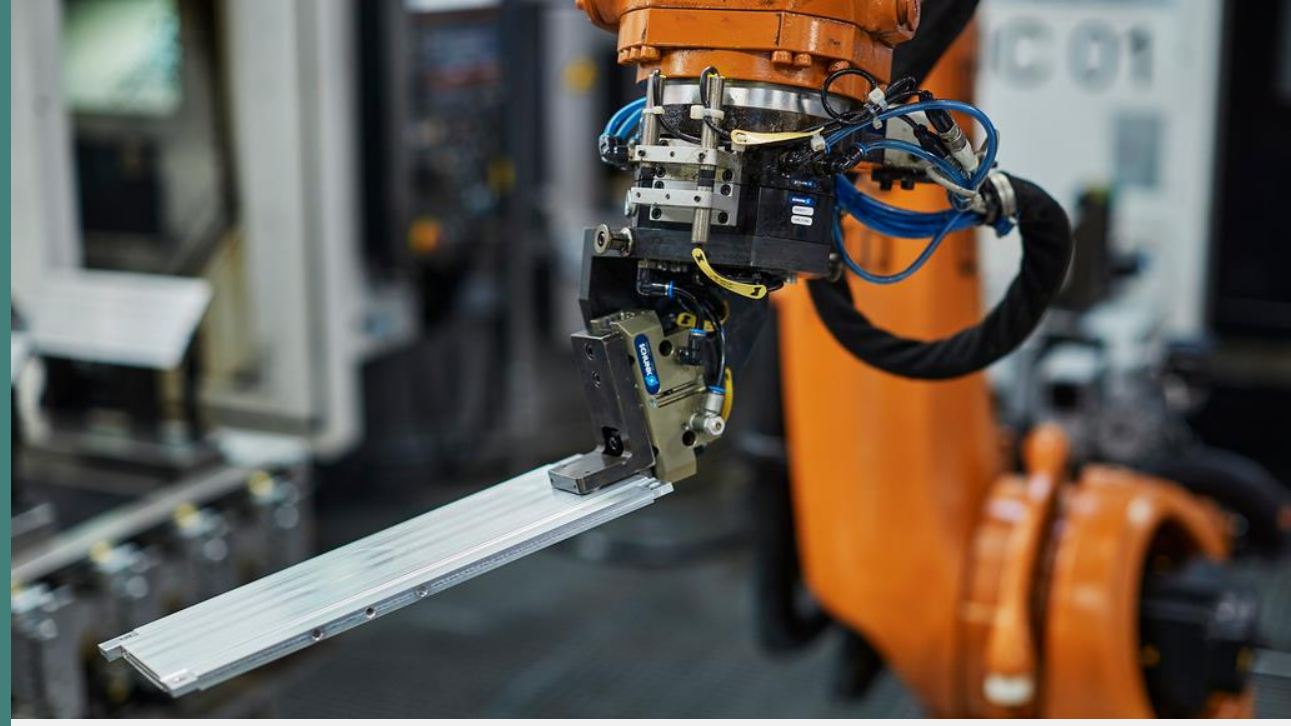
Key figures	Q1 2024	Q1 2023	Q4 2023
External sales volumes, kmt	266	301	236
Adjusted EBITDA, NOK million	1,437	2,223	923
Adjusted EBIT, NOK million	690	1,485	90
Adjusted RoaCE, % LTM[1)]	6.6 %	10.6 %	8.8 %

Adjusted EBITDA

NOK million



1) Adjusted RoaCE calculated as Adjusted EBIT last 4 quarters less 25% tax / Average capital employed last 4 quarters. Previous periods have been restated following a change to the capital employed definition.



Results Q1 24 vs Q1 23

- Higher sales margins
- Positive currency effects
- Lower sales volumes and recycling margins
- Negative metal effect

Outlook Q2 24 vs Q2 23

- Continued strong margins
- Lower sales volumes
- Higher variable costs
- Continued soft extrusions markets

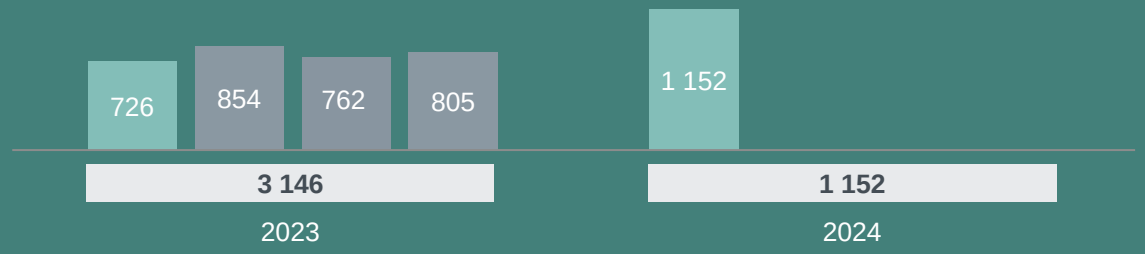
Hydro Energy

Results up on higher production and no AM buy back contract partially offset by lower prices, lower gain on price area differences and lower trading and hedging results

Key figures	Q1 2024	Q1 2023	Q4 2023
Power production, GWh	2,843	2,610	2,440
Net spot sales, GWh [3]	844	817	101
Southwest Norway spot price (NO2), NOK/MWh	736	1,182	818
Adjusted EBITDA, NOK million	1,152	726	805
Adjusted EBIT, NOK million	1,103	677	755
Adjusted RoaCE, % LTM[1),2)]	12.4 %	19.7 %	12.0 %

Adjusted EBITDA

NOK million



1) Adjusted RoaCE calculated as Adjusted EBIT last 4 quarters less tax/ Average capital employed last 4 quarters
2) 50% tax rate applied for 2023 and 2024
3) Volume affected by disrupted delivery from a long-term power purchase agreement in the northern part of the Nord Pool area. The non-delivered volume were 0.5 TWh in the quarter

Results Q1 24 vs Q1 23

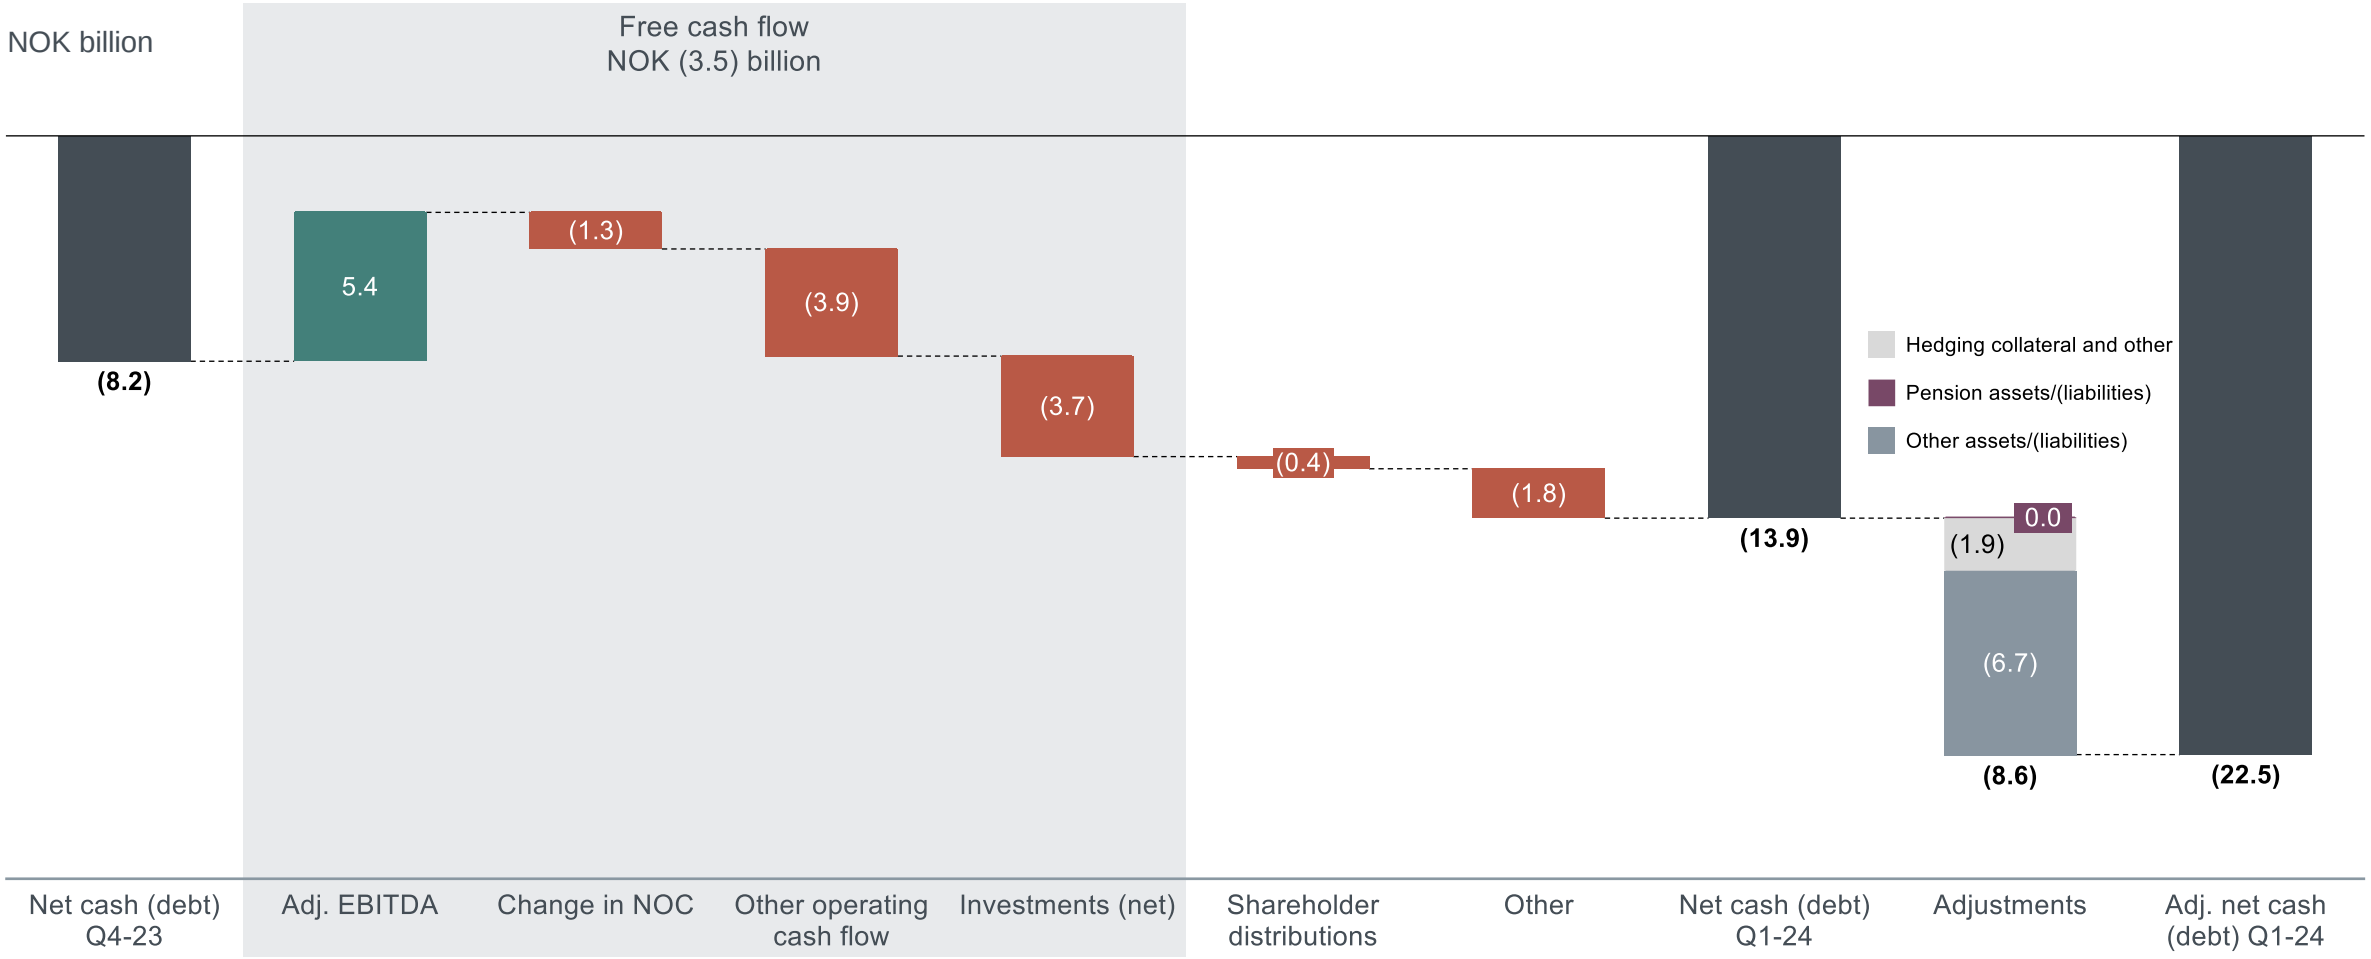
- Higher production and net spot sales
- Lower prices and lower gain on area price differences
- Positive impact from the expiry of an internal fixed price purchase contract from AM at a significant loss in the same period last year.
- Lower trading and hedging results

Outlook Q2 24 vs Q1 24

- Lower production and net spot sales
- Lower prices and lower gain on area price differences
- Continued volume and price uncertainty

Net debt increase of NOK 5.7 billion since Q4

Increase in net debt mainly driven by negative Other operating cash flow, investments and a NOC build



Free cash flow: Excludes hedging collateral (LT/ST restricted cash) and net purchases of money market funds
Collateral: Includes collateral for short-term and long-term liabilities, mainly related to strategic hedges and the operational hedging activity

Our priorities

1. Health and safety first
2. Maintain robustness and mitigate weaker markets
3. Deliver on Recycling, Extrusions, and Renewable growth ambitions
4. Execute on decarbonization and technology road map
5. Seize opportunities in greener aluminium at premium pricing

Pioneering the green aluminium transition, powered by renewable energy

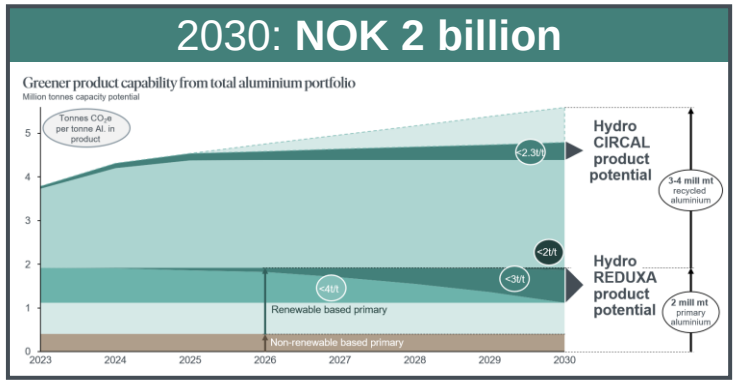
Additional slides

Hydro

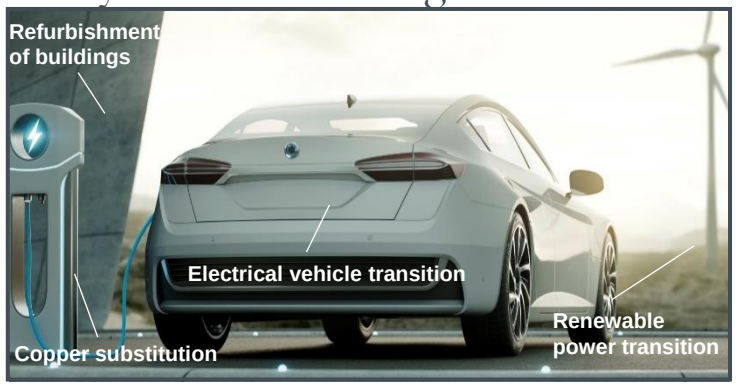
Position, Strategy and Ambitions

Why invest in Hydro?

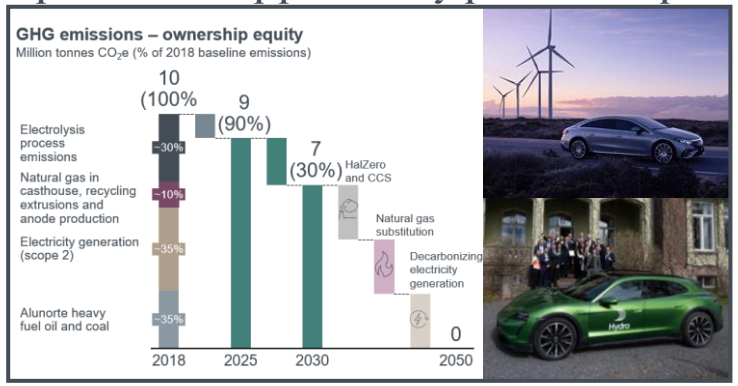
Greener earnings uplift potential 2030



Portfolio of profitable growth projects as key enablers for the green transition



Pathway to net-zero aluminium products supported by partnerships



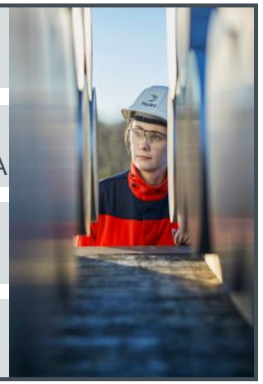
Robust positioning with ambition to strengthen competitiveness

1st
quartile cost position AM and B&A

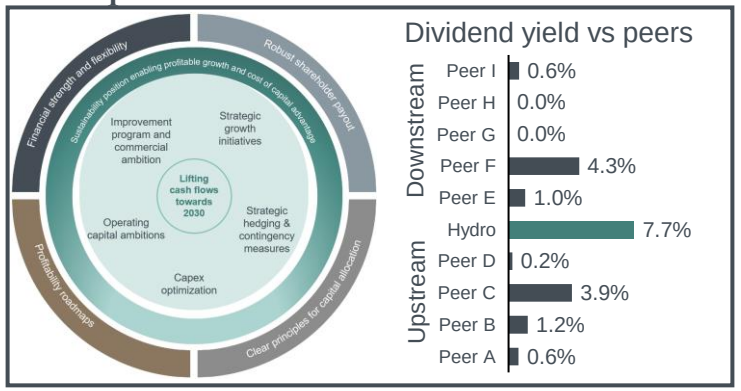
1st
quartile emission position AM and B&A

Long-term
renewable power contracts

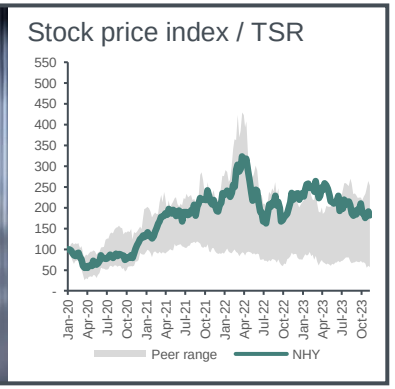
Increased
improvement ambitions



Resilient financial framework and competitive shareholder distribution



Good track record on relative shareholder value creation



Hydro has a unique position to succeed in the new reality

118 years of industrial experience, solving global challenges through innovation, technological advances and strong commercial mindset

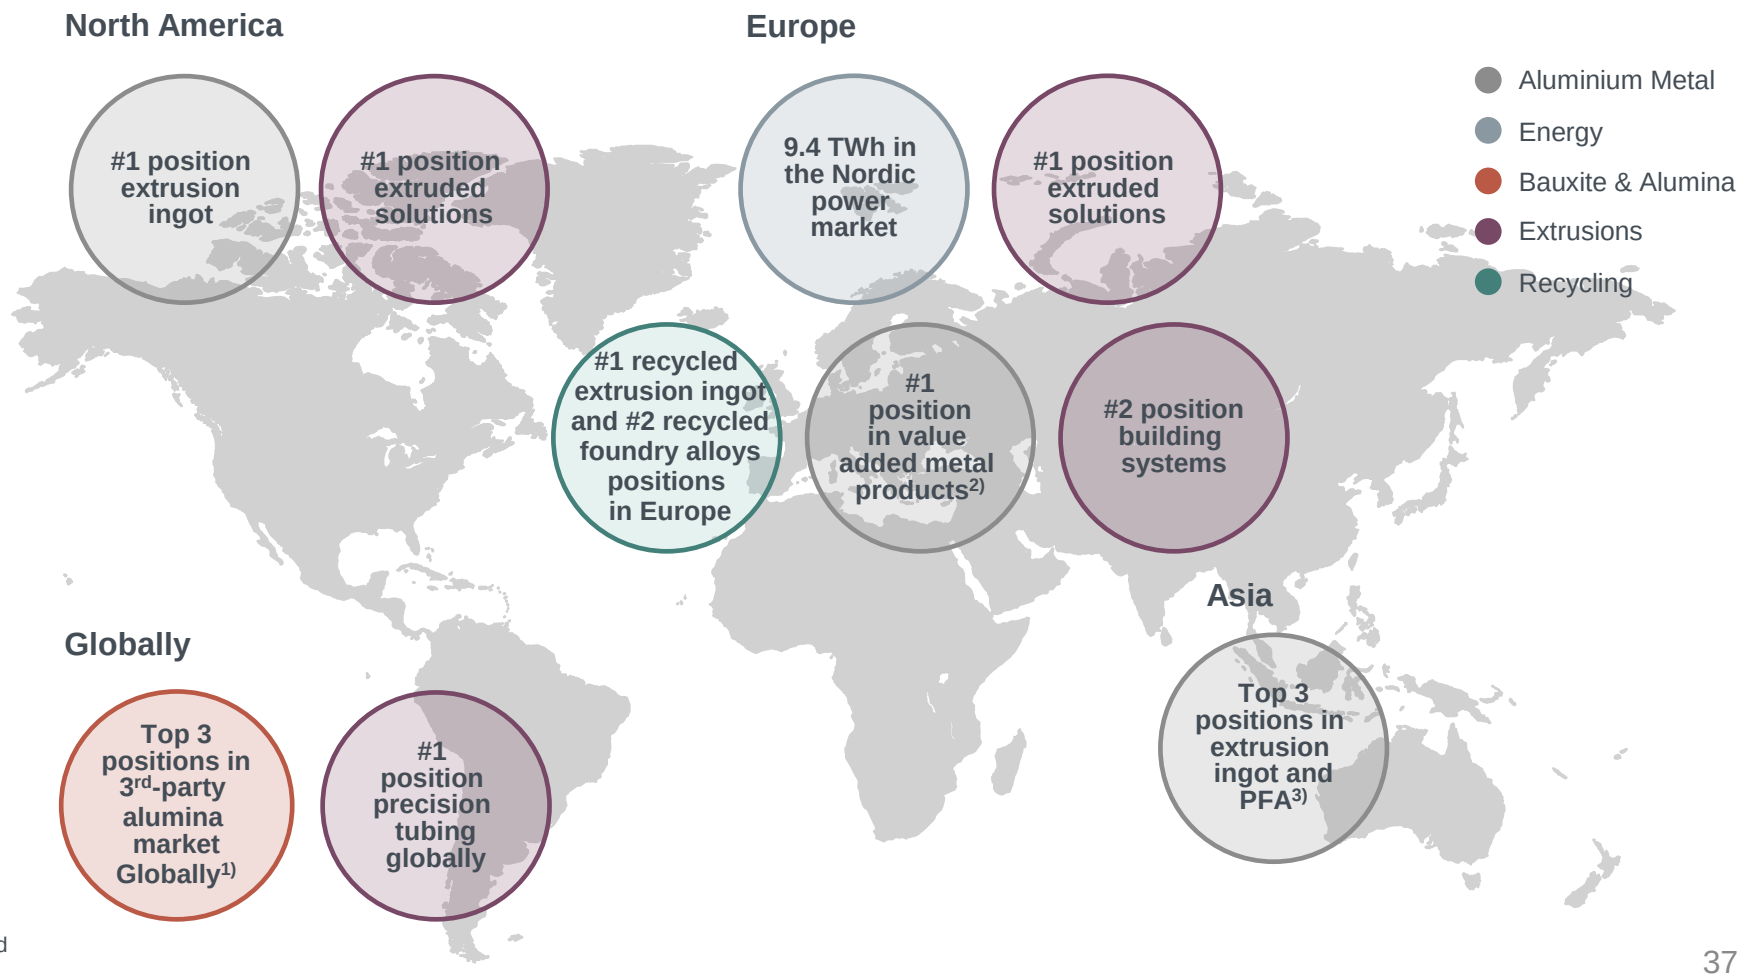
- Market leading position in low-carbon aluminium with a concrete roadmap towards zero
- Unique position with captive renewable energy resources and competence
- Low and robust cost position and strong track record on shareholder value creation
- Preferred supplier and sustainability partner on the way to zero, integrated value chain enables traceability “under one roof”
- Strong positions within the main markets in the EU and North America

Strong global presence throughout the aluminium value chain

Built on market understanding, customer closeness and competence

The complete aluminium company

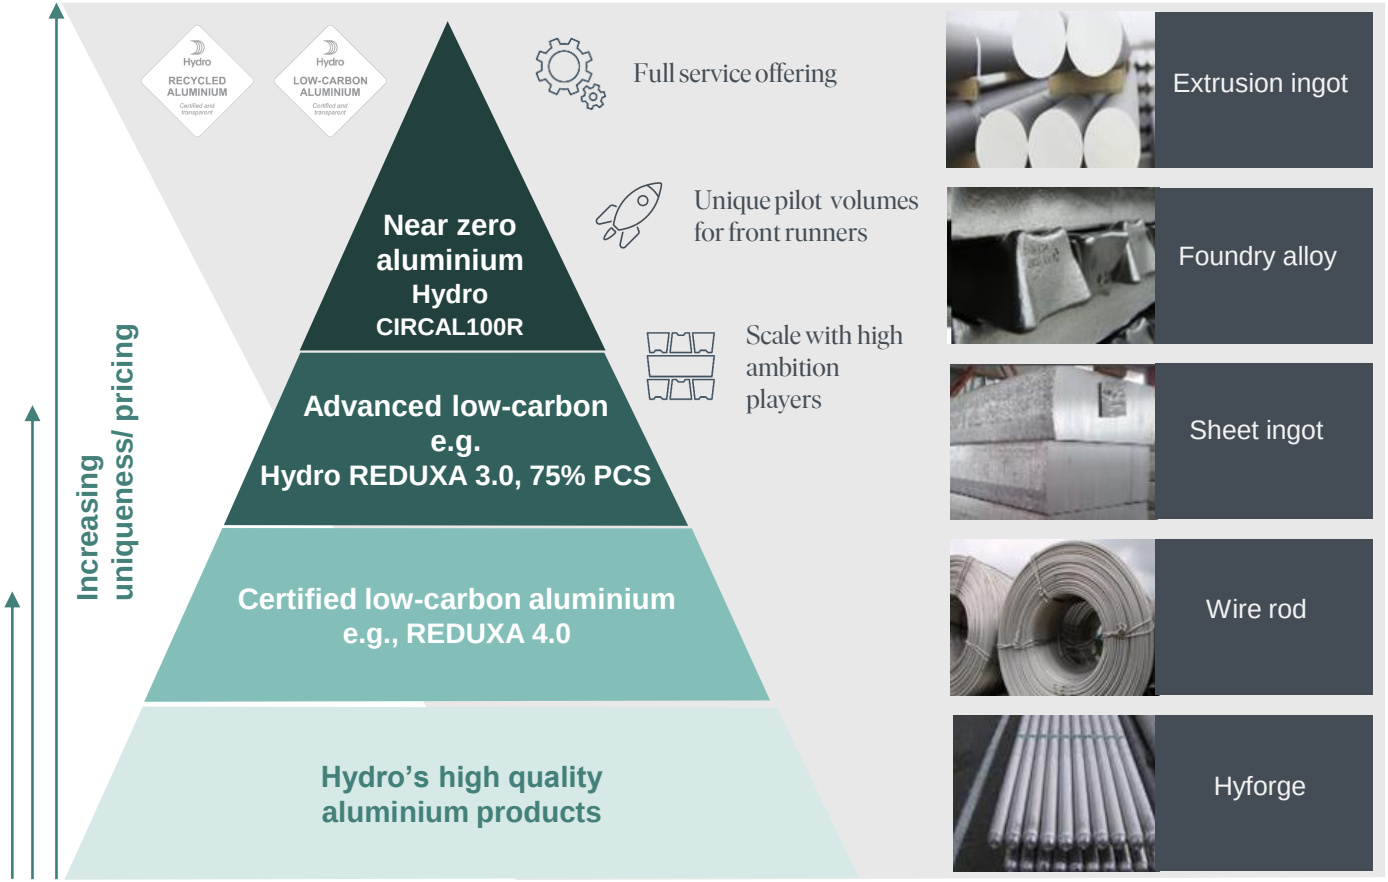
- Market leader in low-carbon aluminium with clear roadmap to net-zero
- High-quality bauxite and alumina production in Brazil
- The fourth largest aluminium producer outside China
- Primary production capacity in Norway, Qatar, Slovakia, Brazil, Canada, Australia
- 9.4 TWh captive hydropower production
- World leader in aluminium extruded profiles
- Broad recycling and remelt network in Europe and the U.S., including extrusion ingot and scrap-based foundry alloys
- Unparalleled technology and R&D organization



1) Outside China
2) Extrusion ingot, sheet ingot, primary foundry alloys and wire rod
3) Primary Foundry Alloys

Unique value proposition in aluminium

Combined offering of primary and recycled aluminium with a full product spectrum and with tailor-made alloys



Sources: EAA, IAI, Hydro internal analysis

Providing products with low emissions

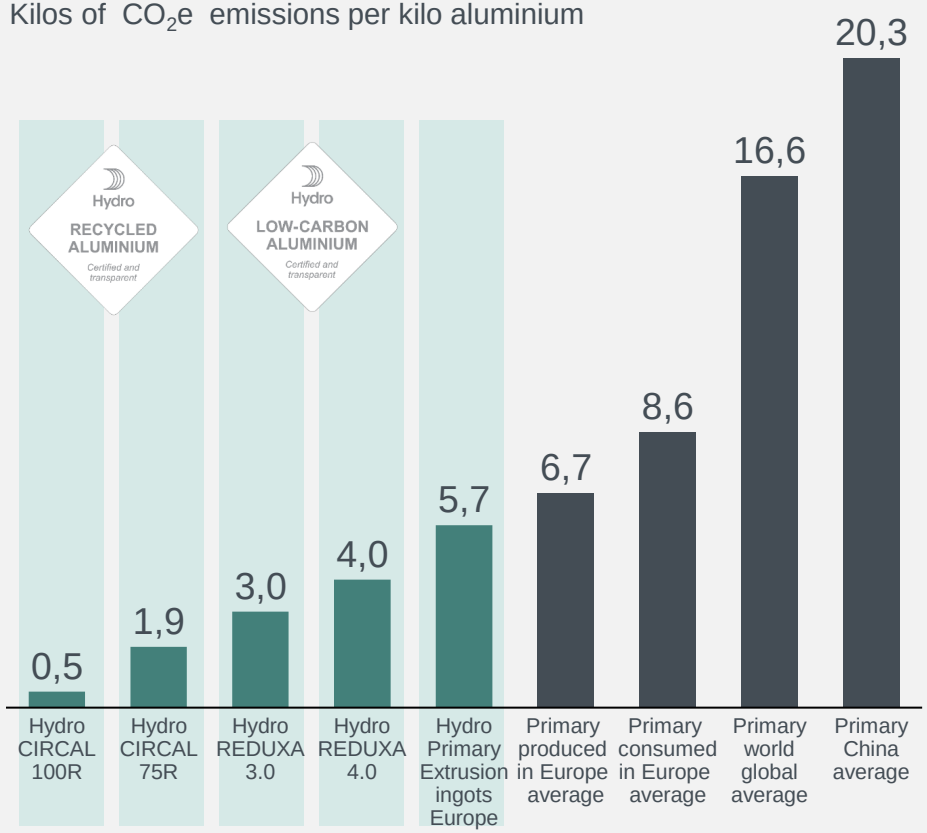
Primary aluminium produced on renewable energy

4-6 times lower than the world global primary average

Recycled aluminium from Hydro

More than **8 times** for 75R, and **33 times** for 100R lower than the world global primary average

Kilos of CO_2e emissions per kilo aluminium



Uniquely positioned with an integrated value chain

Hydro's control of integrated value chain drives key decarbonization capabilities

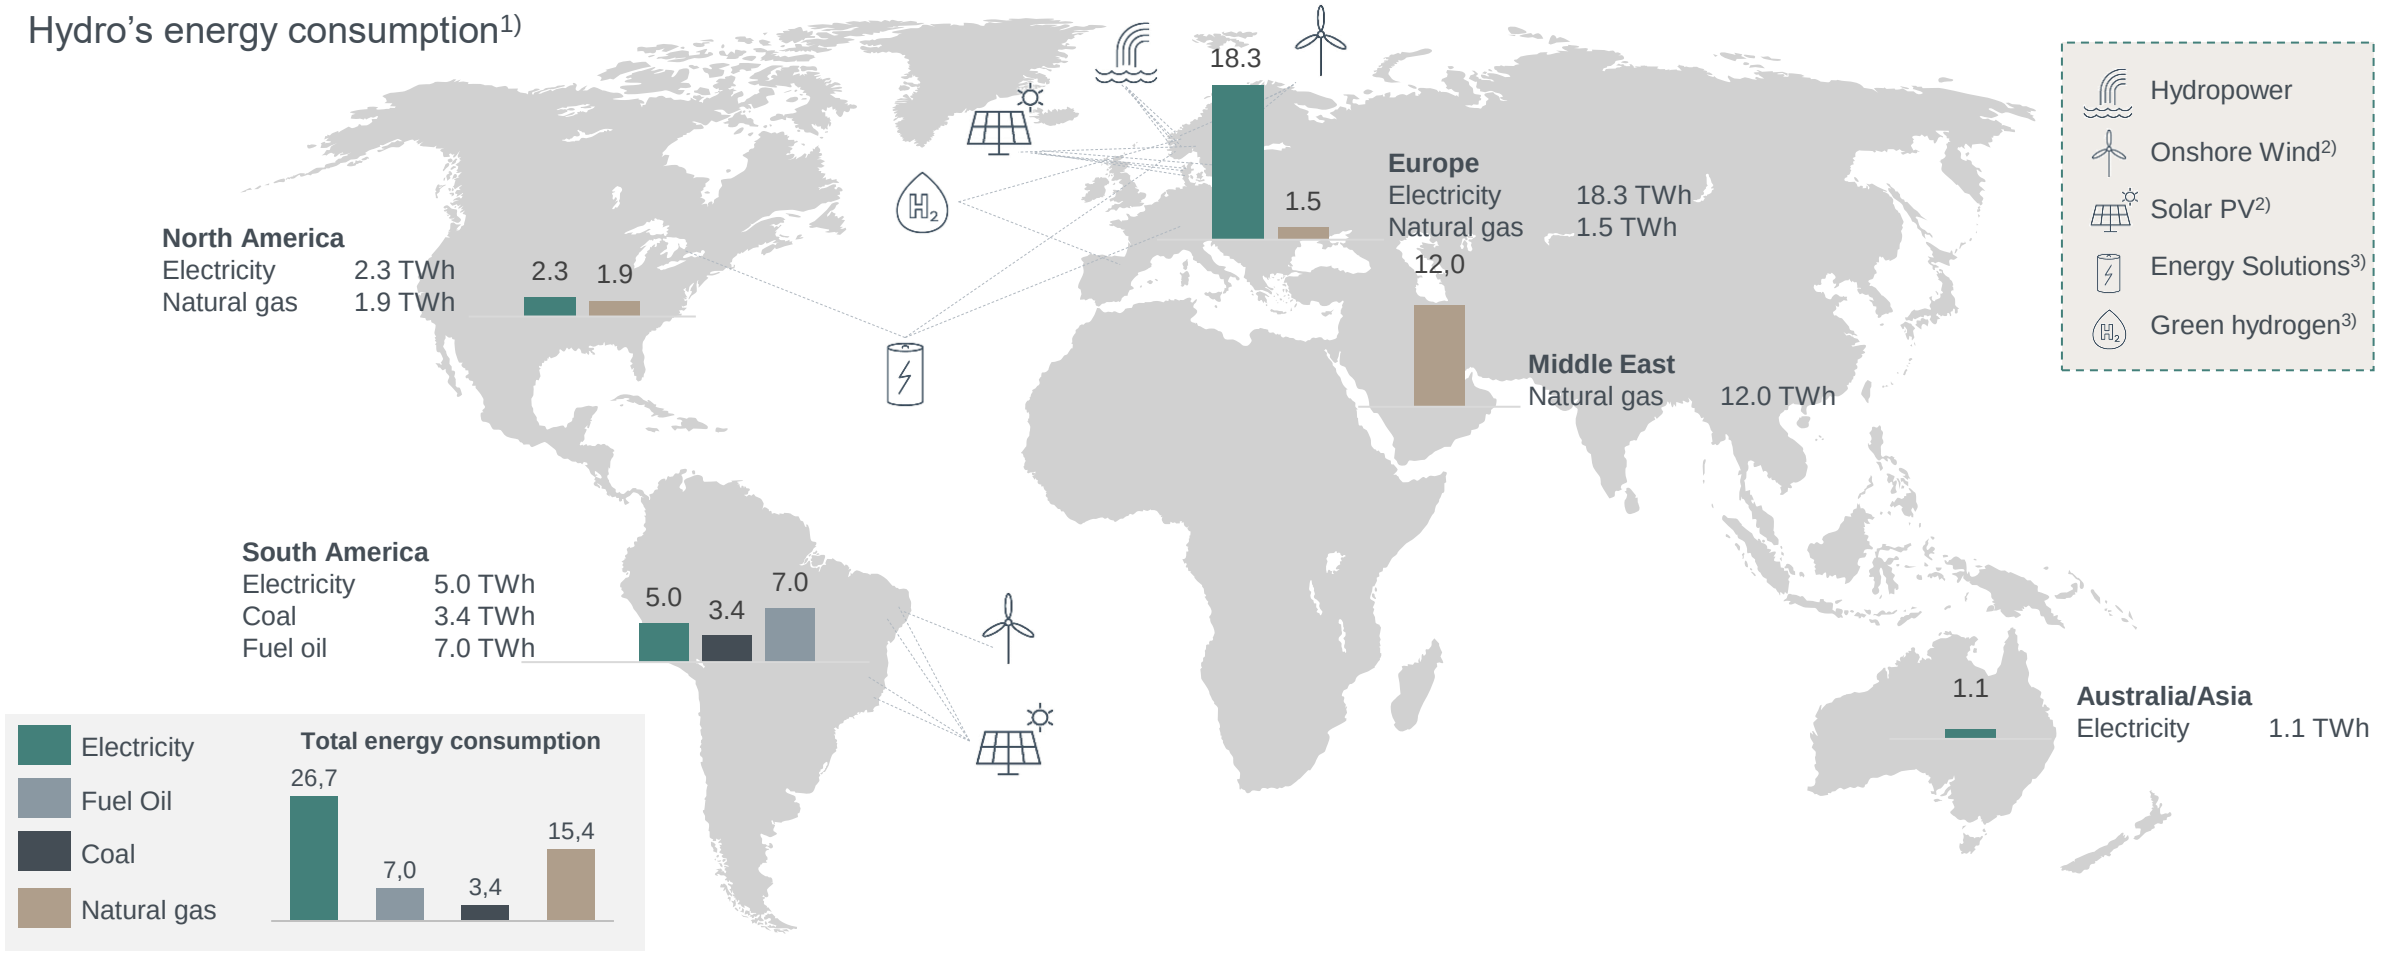
Business	Bauxite & Alumina	Aluminium Metal	Recycling	Energy	Extrusions
Strong starting point	1st quartile CO_2e emissions	Primary production with CO2e content 65% lower than global average	Leading in PCS recycling for extrusion ingots Advanced sorting technology	Captive renewable power Leader in industrial PPAs	World's largest extrusion company with integrated recycling capacity EcoDesign driving circularity
Ambitious roadmap	1st decile by 2025	Advanced HalZero and CCS technology to further reduce smelting emissions	Increasing PCS recycling up to 850-1,200 kt by 2030	Renewables developer, including batteries and hydrogen	Greener local energy sourcing Increased recycling

Certified, traceable, low-carbon aluminium

Pioneering the green aluminium transition, powered by renewable energy

Hydro

Hydro's energy consumption[1)]

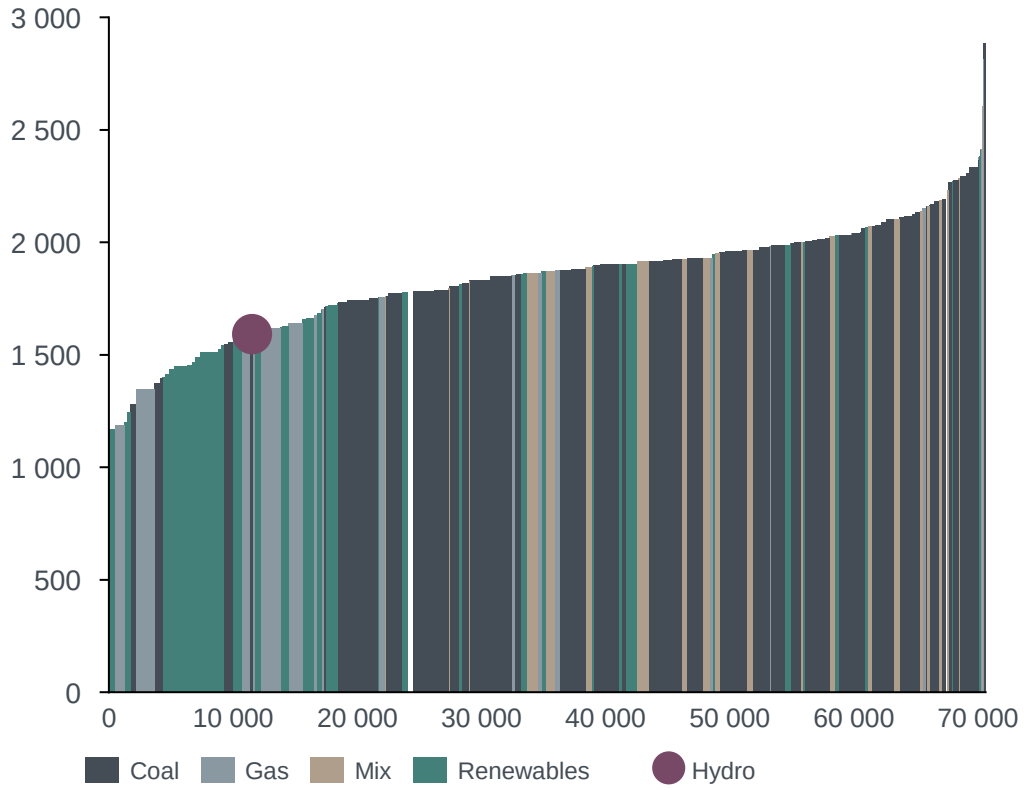


1) Based on equity-adjusted 2022 values for Norsk Hydro's bauxite mines, alumina refineries, smelters, remelters and extrusion plants.
2) Only projects in operation and under construction or announced. 3) Only pilot projects

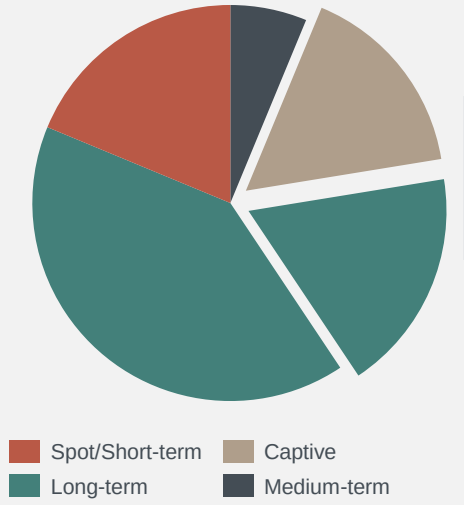
Long term renewable power contracts ensure robustness

Smelter business operating cost curve 2023

USD/tonne

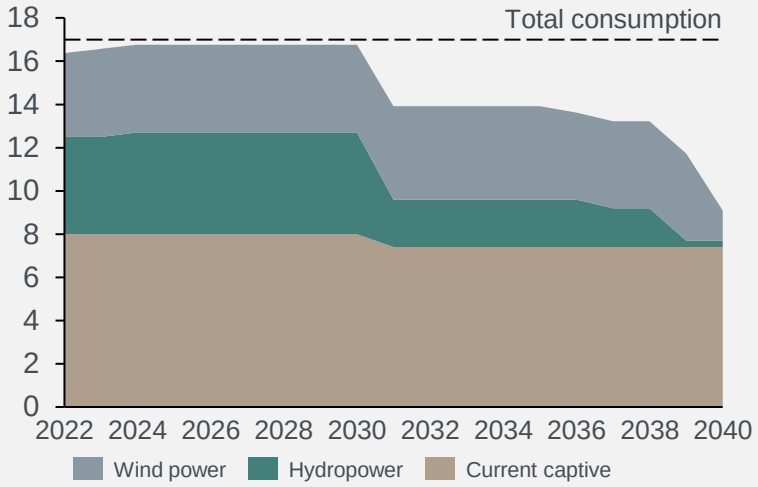


Power sourcing for smelters in Europe



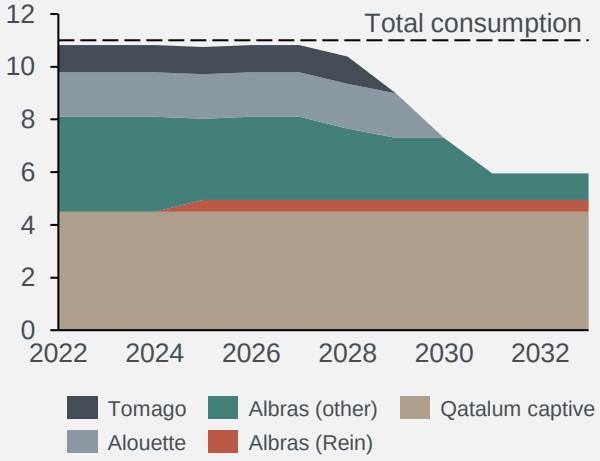
Power sourcing for Hydro smelters in Norway[1)]

TWh



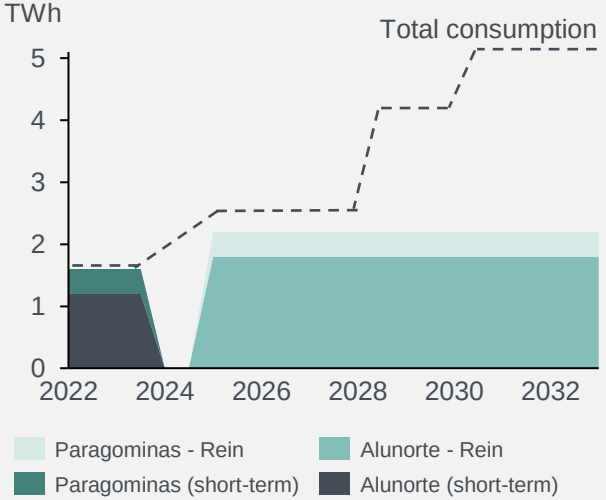
Power sourcing for Hydro JV smelters[2)]

TWh



Power sourcing for Hydro B&A[3)]

TWh



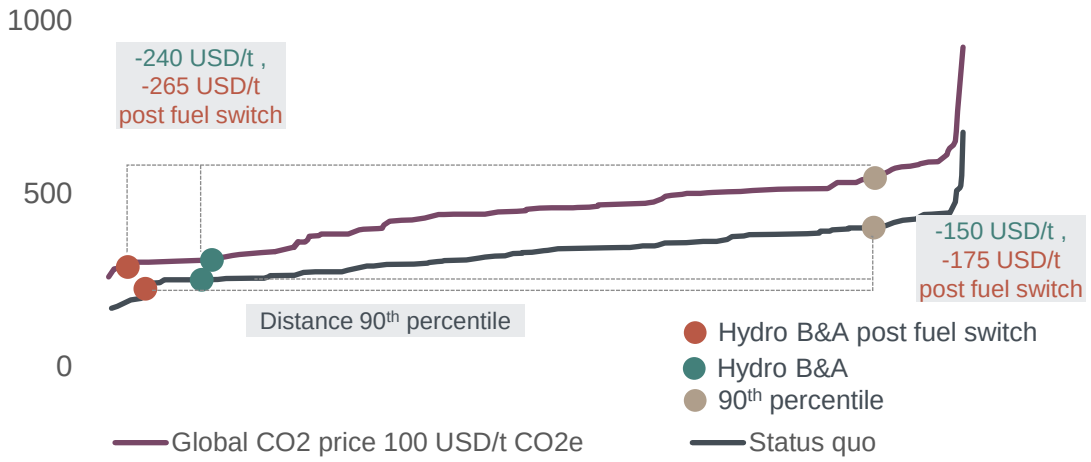
Source: CRU, Hydro analysis

1) Net ~8 TWh captive assumed available for smelters. 2) Hydro Share: Qatalum captive (50%), Alouette (20%), Tomago (12.4%), Albras (51%). 3) Total Alunorte and Paragominas – all consumption sourced through Hydro

Steeper cost curve, low-carbon demand and robust position drive margin potential

Bauxite & Alumina

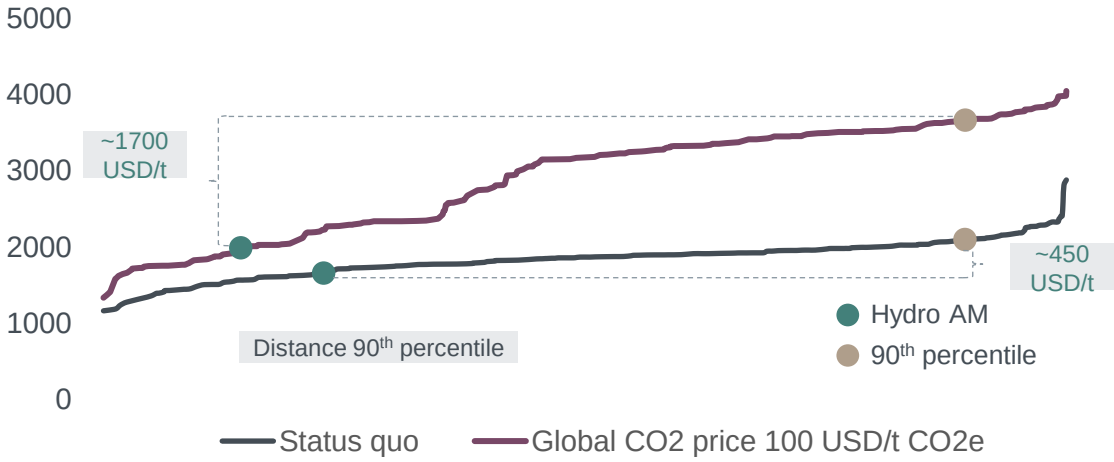
Alumina Business Operating Cost curve (2023)



- Competitively positioned on the global cost curve at the 30th percentile
- Fuel switch & electrical boilers lower costs, and reduce carbon emissions by 30% by 2025
- Global carbon price would improve relative competitive position in Hydro B&A

Aluminium Metal

Smelter Business Operating Cost curve[1] (2023)



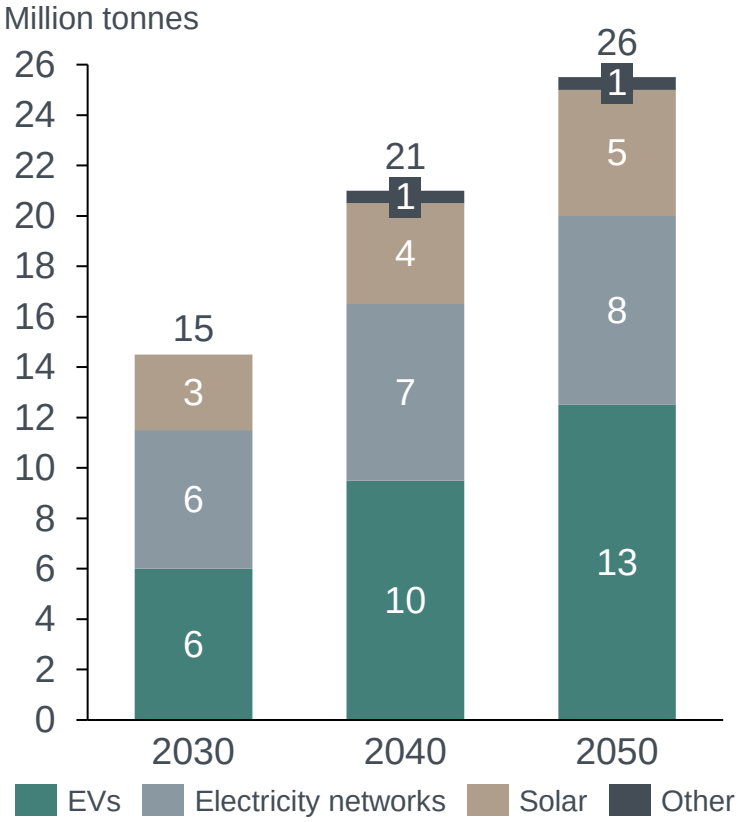
- Competitive relative position on the global cost curve at the 20th percentile
- Strong portfolio of low-carbon smelters
- Global carbon price would improve relative competitive position in Aluminium Metal

1) Assumptions: LME 3m 2,458 USD/t, Alumina 293 USD/t, SHFE cash 2,909 USD/t, NOK/USD 8.79
Source: CRU cost model

Aluminium is a key enabler for the entire green transition

2030 energy transition will require 15-22 million tonnes aluminium, increasing to 25-42 million tonnes by 2050

Additional aluminium demand from green transition enablers[1)]



E-mobility transition

Automotive CAGR 2022-30
8 - 10%
Aluminium content per car to grow by
25% in 2030 [2)]

Circular building & construction solutions

EU set mandatory energy consumption reduction target of **11.7% by 2030**

Heating & cooling

Market share aluminium from 17% to
25% in 2030[3)]

Solar panel solutions

CAGR EU 2022-30 for solar segment
10 - 15 %[4)]

Copper substitution

Adjusted for conductivity, aluminium is approx
50% lighter
compared to copper [5)]

Electricity grids

Reaching 1.5 degree scenario will require adding or refurbishing
80 million kms of grids by 2040 [6)]

1) Additional demand related to green transition technologies in STEPS scenario.

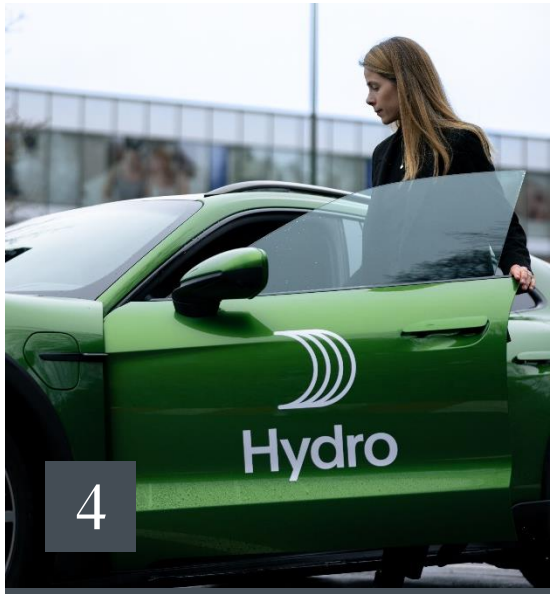
Shifting gear to capture opportunities in a new reality

Key steps for Hydro to lead the green aluminium transition towards 2030

Step up growth investments in Recycling and Extrusions to take lead in the market opportunities emerging from the green transition

Step up ambitions within renewable power generation

Execute on ambitious decarbonization and technology road map and step up to contribute to nature positive and a just transition



Shape the market for greener aluminium in partnership with customers

Step up growth investments in Extrusions

1 2 3 4

- Increase market share in high-growth, non-commoditized segments leveraging innovation and solution offerings

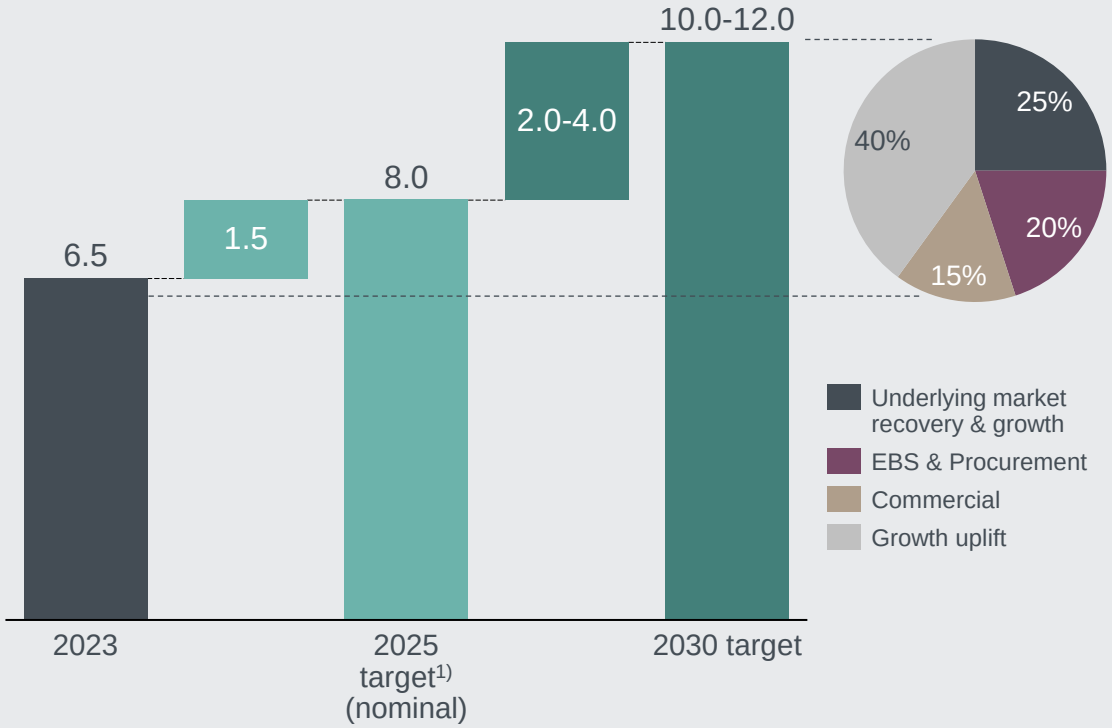
- Develop and grow capacity and capabilities through investments in new presses, fabrication, value added services, and recycling

- Commercial opportunities from sustainability, through segmentation and greener offerings

- Increase digitalization and standardization to drive procurement excellence and reduce energy consumption

Extrusions EBITDA

NOK billion (real 2023)



1) Target 2025 in nominal terms as communicated in 2021. Range target for 2030 in real terms

Step up growth investments in Recycling

1 2 3 4

Strengthen scrap sorting capabilities, secure feedstock

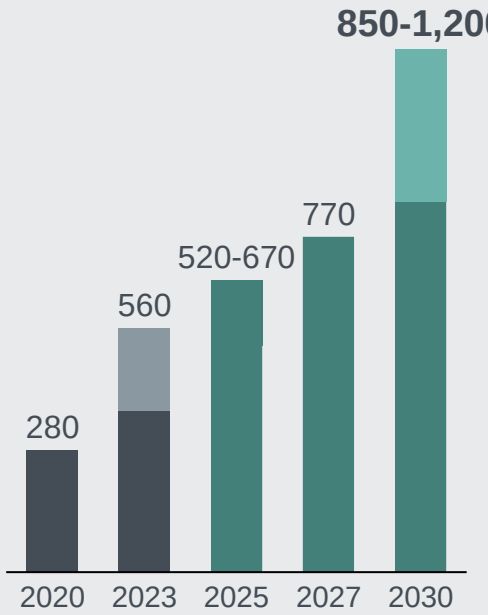
Expand global asset base across the value chain

Diversify product portfolio, develop innovative solutions

Shape market for recycled products in partnership with customers

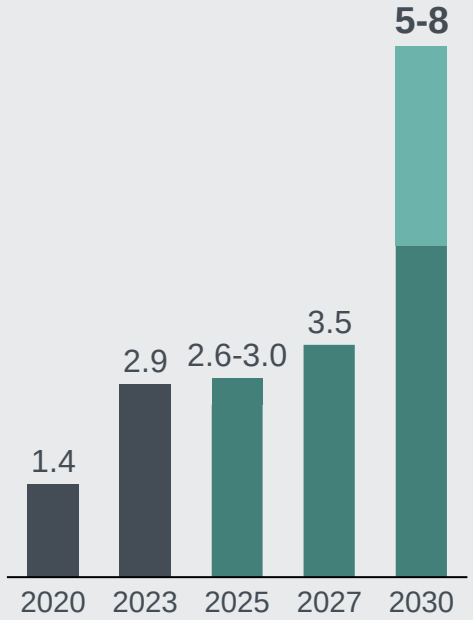
PCS usage capacity[1)]

Tonnes ('000)



Recycling EBITDA[1)]

NOK billion



Realized Target Installed capacity ramping up

1) Range based on capex. High-range include ~70% of further potential capex given market and M&A. Including Alumetal for July 2023

Step up our ambitions and efforts in renewable power generation

1 2 3 4

Secure access to renewable power through hydropower system upgrades and expansions

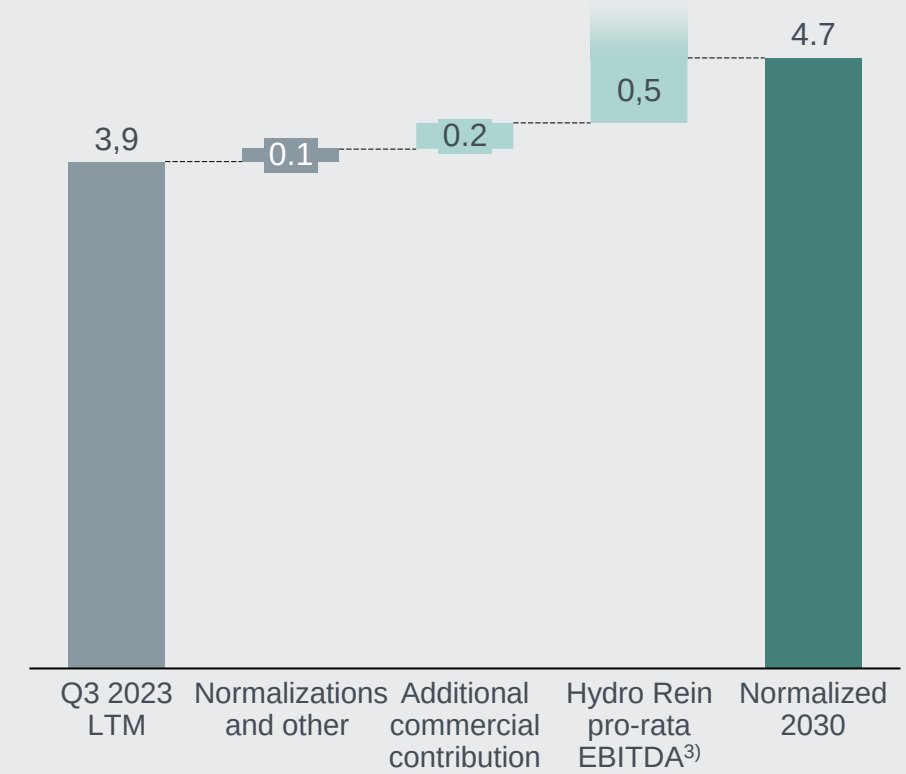
- Grow and upgrade existing hydropower plants to capture peak prices, increasing value of flexibility
- Expand market operations and commercial ambitions based on hydropower reservoir capacity, balancing power from wind and solar, and commercial positions

Hydro Rein to deliver onshore wind and solar projects, main focus in the Nordics and Europe

- Pursue profitable projects through JV owned by Hydro and Macquarie Asset Management
- Current portfolio[1)] add 2.4 TWh to Rein's captive power and 5.3 TWh long term PPAs to Hydro
- Sustainable and attractive risk-adjusted returns of eIRR 10-20%

EBITDA 2030 Hydro Energy Classic and Hydro Rein

NOK billion[2)]



1) Projects in construction and secured 2) Commercial contribution in AEBITDA Q3-23 LTM of NOK 0.5 billion included
3) Hydro's share of joint venture EBITDA from assets. Level pending margins, farm downs, growth, debt level/other funding

Execute on ambitious decarbonization and technology road map, step up to contribute to nature positive and a just transition

Climate

Forcefully deliver on net-zero roadmap, decarbonizing value chain from mine-to-components

- Net-zero scope 1 and 2 GHG emissions by 2050 or earlier
- On track to meet 30 percent reduction in scope 1 and 2 CO2e by 2030
- 30% reduction of upstream scope 3 GHG emissions per tonne aluminium by 2030
- 850-1200 kTonnes post-consumer scrap recycling capacity by 2030

Nature

Contribute to a nature positive future through initiatives on biodiversity, emissions reduction and supply chain management

- No Net-Loss of biodiversity for Hydro's bauxite mine, from a 2020 baseline
- No Net-Loss of biodiversity for new projects
- 1:1 reforestation on track
- 50% reduction in material non-GHG emissions by 2030
- Eliminate landfill of all recoverable waste by 2040

Social

Improve lives and livelihoods wherever Hydro operates by supporting a just transition

- On track to deliver on target of empowering 500,000 people with skills and education by 2030
- Significant social projects completed in Brazil
- Transparency and traceability of key product sustainability data by 2025 or earlier

Shape market for greener aluminium, in partnership with customers

1 2 3 **4**

Utilize Hydro's combined strengths as a fully integrated company from mine to metal

Partner with strategic customers to grow market for greener aluminium

Partner with Original Equipment Manufacturers to champion joint decarbonization targets

Partnering with designers, shaping a greener market

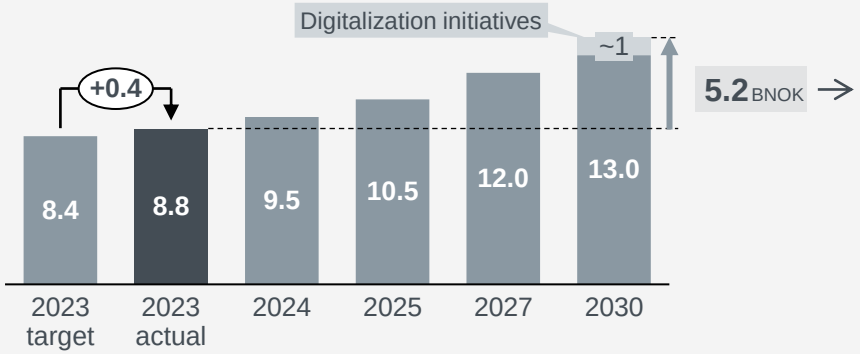
- Partnering up across the value chain is key for more sustainable production and consumption
- Through working with leading designers, Hydro wants to challenge the way things are made and pull the industry in a greener direction through getting more manufacturers to understand how to select materials based on sustainability aspects
- At the Milan Design Week 2024, Hydro has collaborated with seven world renowned designers to create objects using extruded profiles made of Hydro CIRCAL 100R, the world's first aluminium made from entire post-consumer scrap
- The designs will be showcased at Hydro's exhibition 100R
- Hydro is the only aluminium company present in such a way and has already made it to the list of "Twenty unmissable installations and exhibitions at this year's Milan design week" by a renowned design magazine

Extended improvement ambitions

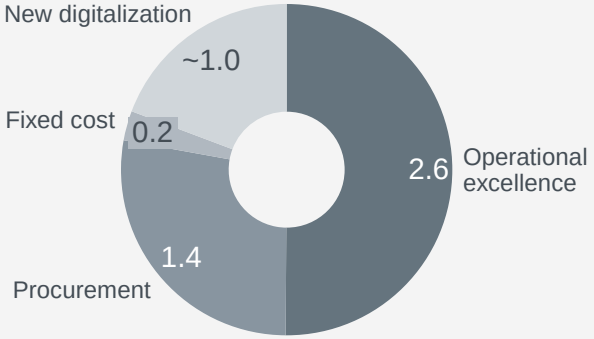
Strengthening future competitiveness and positioning with additional potential from digitalization, greener premiums and commercial improvements in Energy

Improvement program

Ambitions extended with additional NOK 1 billion until 2030

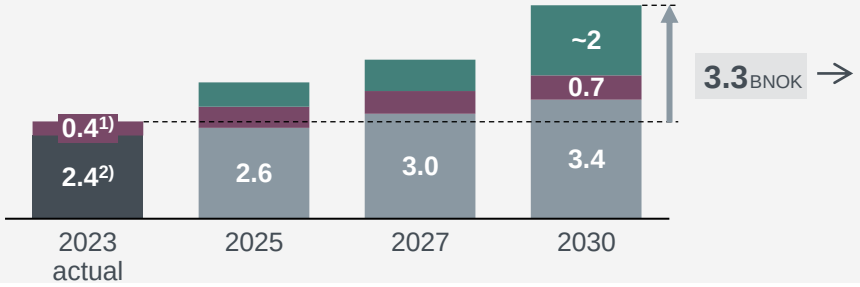


5.2 BNOK →

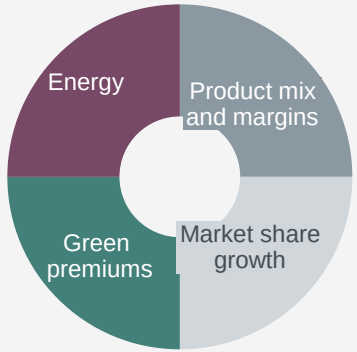


Commercial initiatives

Ambition increased in 2025 and 2027, and extended with additional NOK 0.4 billion until 2030



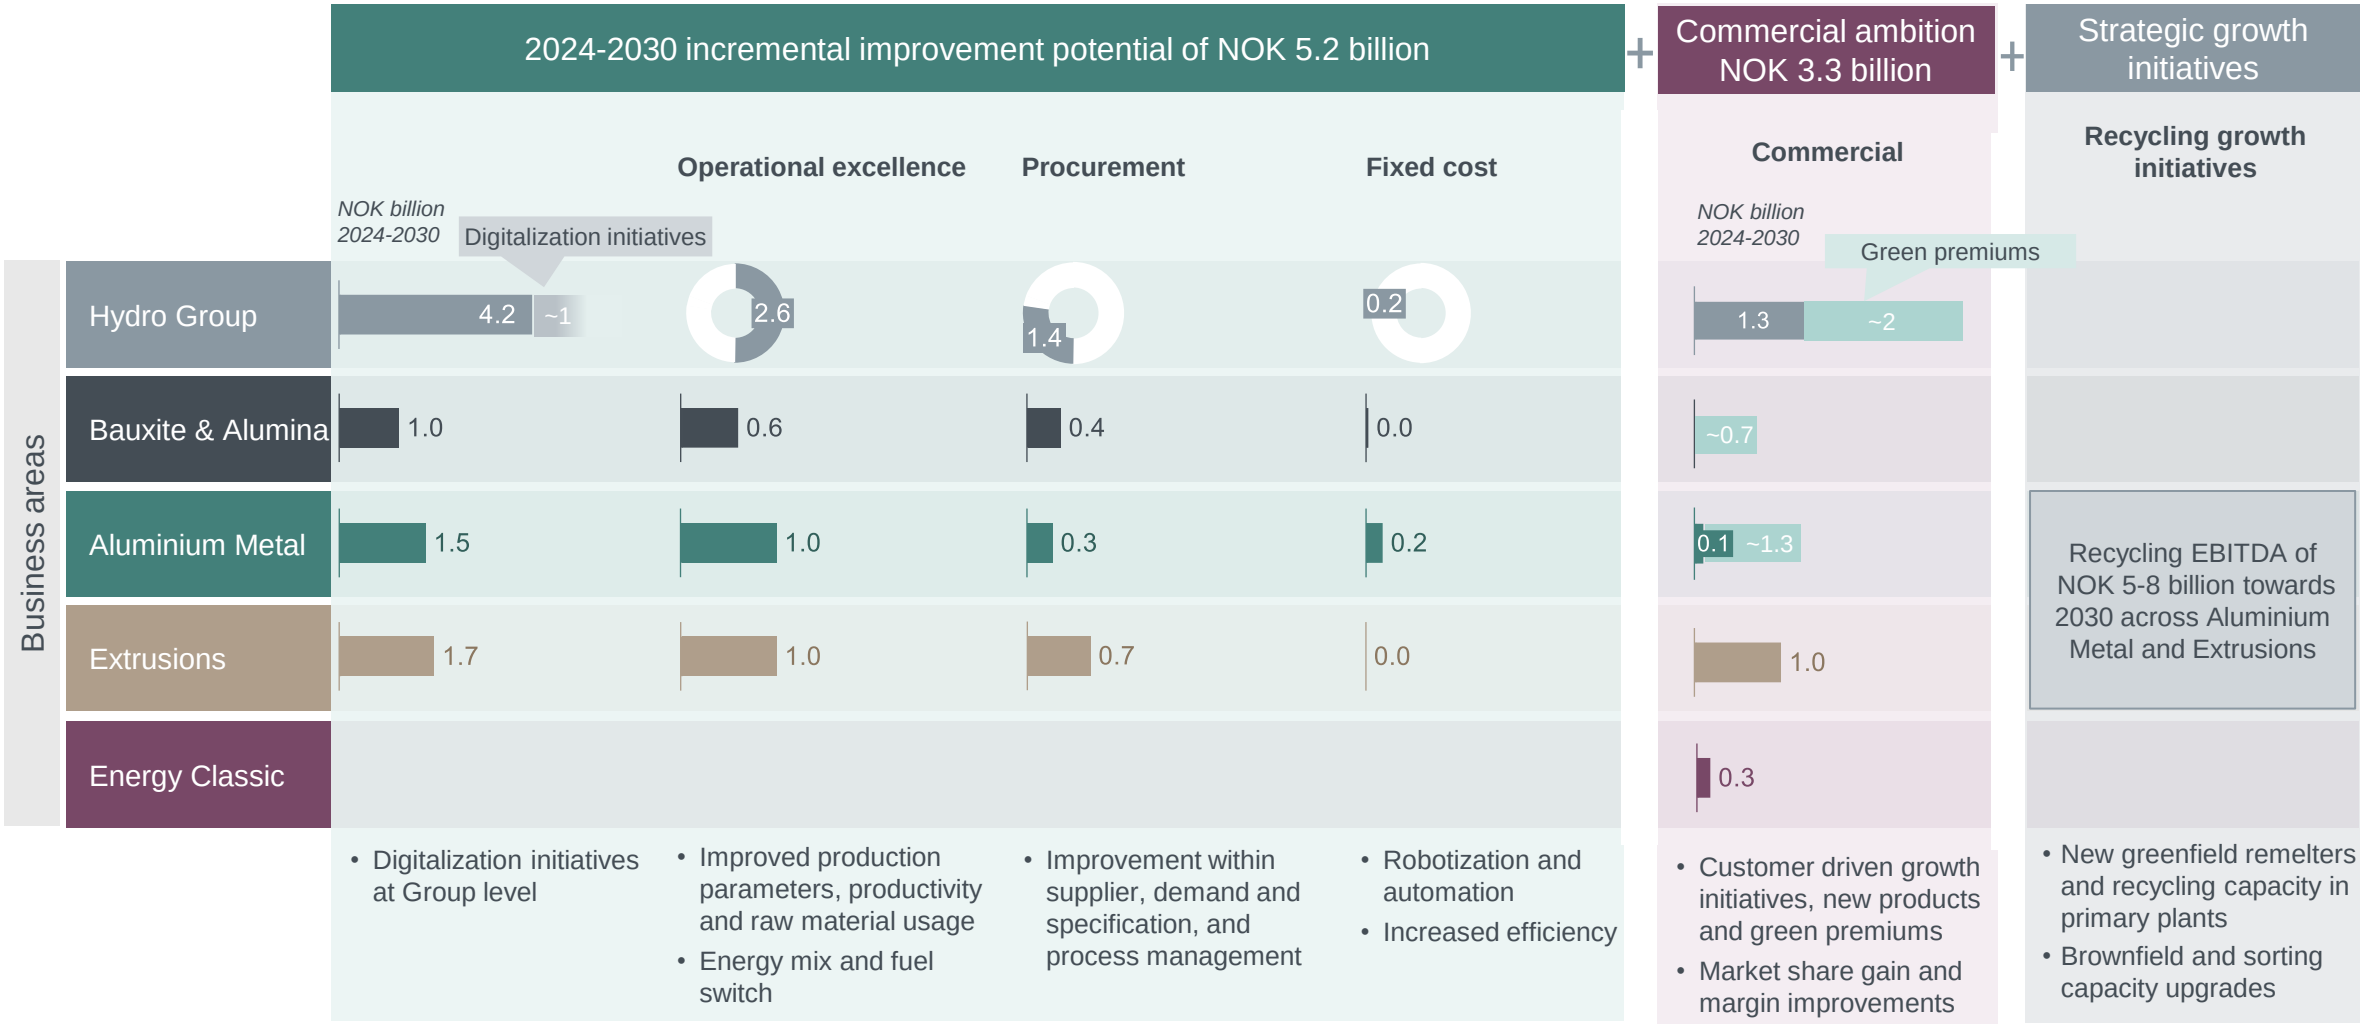
3.3 BNOK →



1) Added scope on top of initial target, Energy commercial improvements
2) Including greener premiums
Note: Estimated NOK 1.5 billion in annual average CAPEX to meet remaining improvement and commercial ambitions.

Extending the improvement ambitions to 2030

Targeting NOK 14.0 billion in accumulated improvements and NOK 6.1 billion in commercial ambitions by 2030



Note: ~1.5-2 BNOK in annual average CAPEX to meet remaining improvements and commercial ambitions

Hydro is pioneering the green aluminium transition

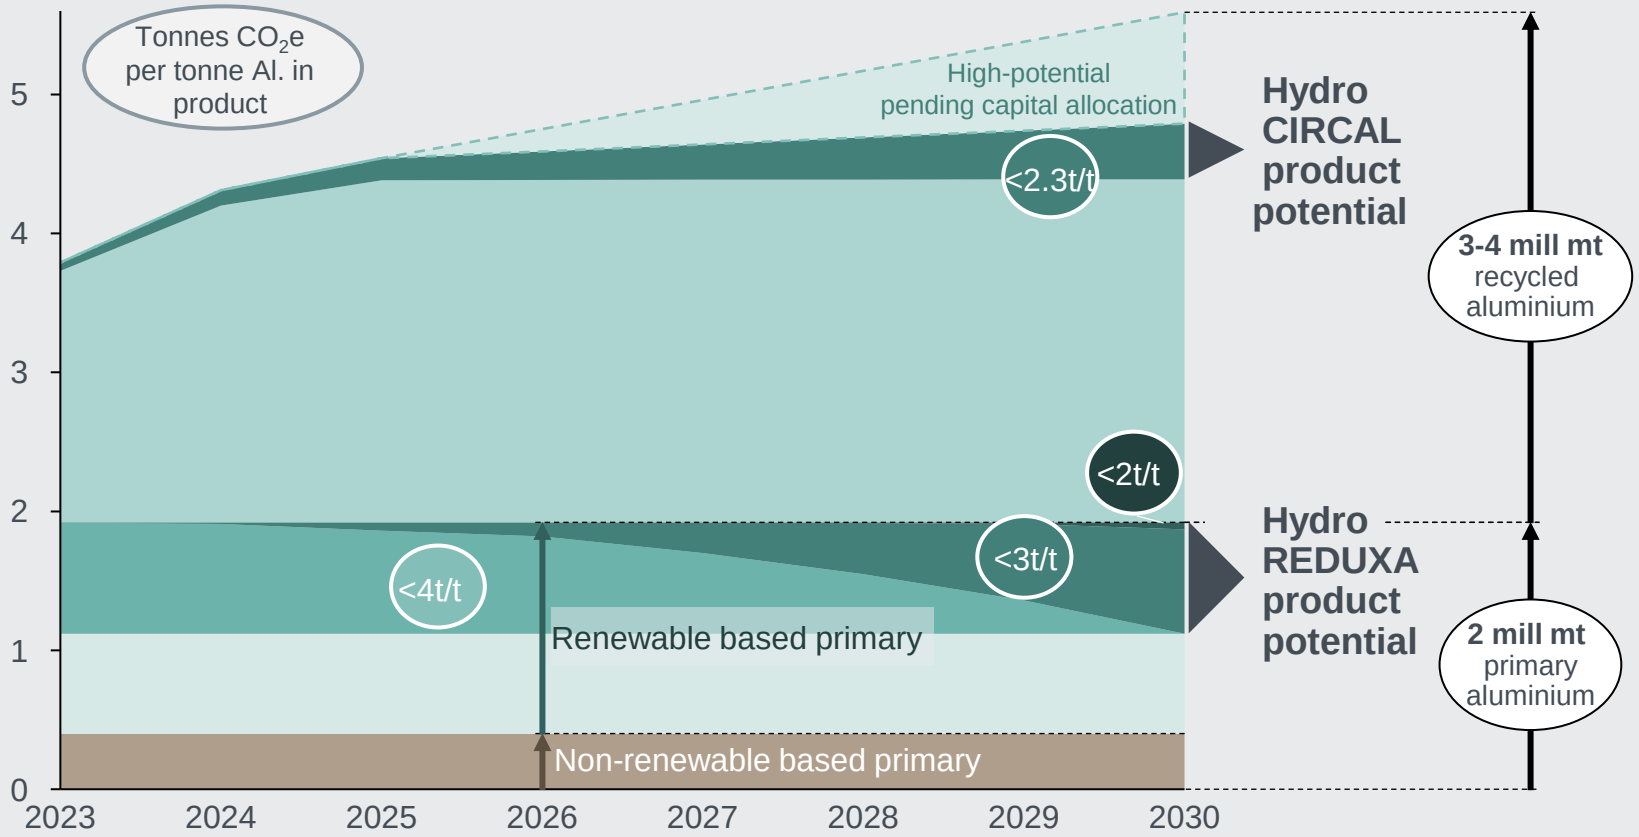
Greener earnings uplift potential 2030

NOK 2 billion[1)]

Hydro

Greener product capability from total aluminium portfolio[1)]

Million tonnes capacity potential



1) Based on 2030 EU ETS cost and relative CO_2 reduction vs Hydro REDUXA 4.0 at current industry traded upcharge. Hydro REDUXA and CIRCAL potential based on estimated certification capacity. Primary capacity based on equity share renewable power. Hydro CIRCAL products have post-consumer scrap content > 75%

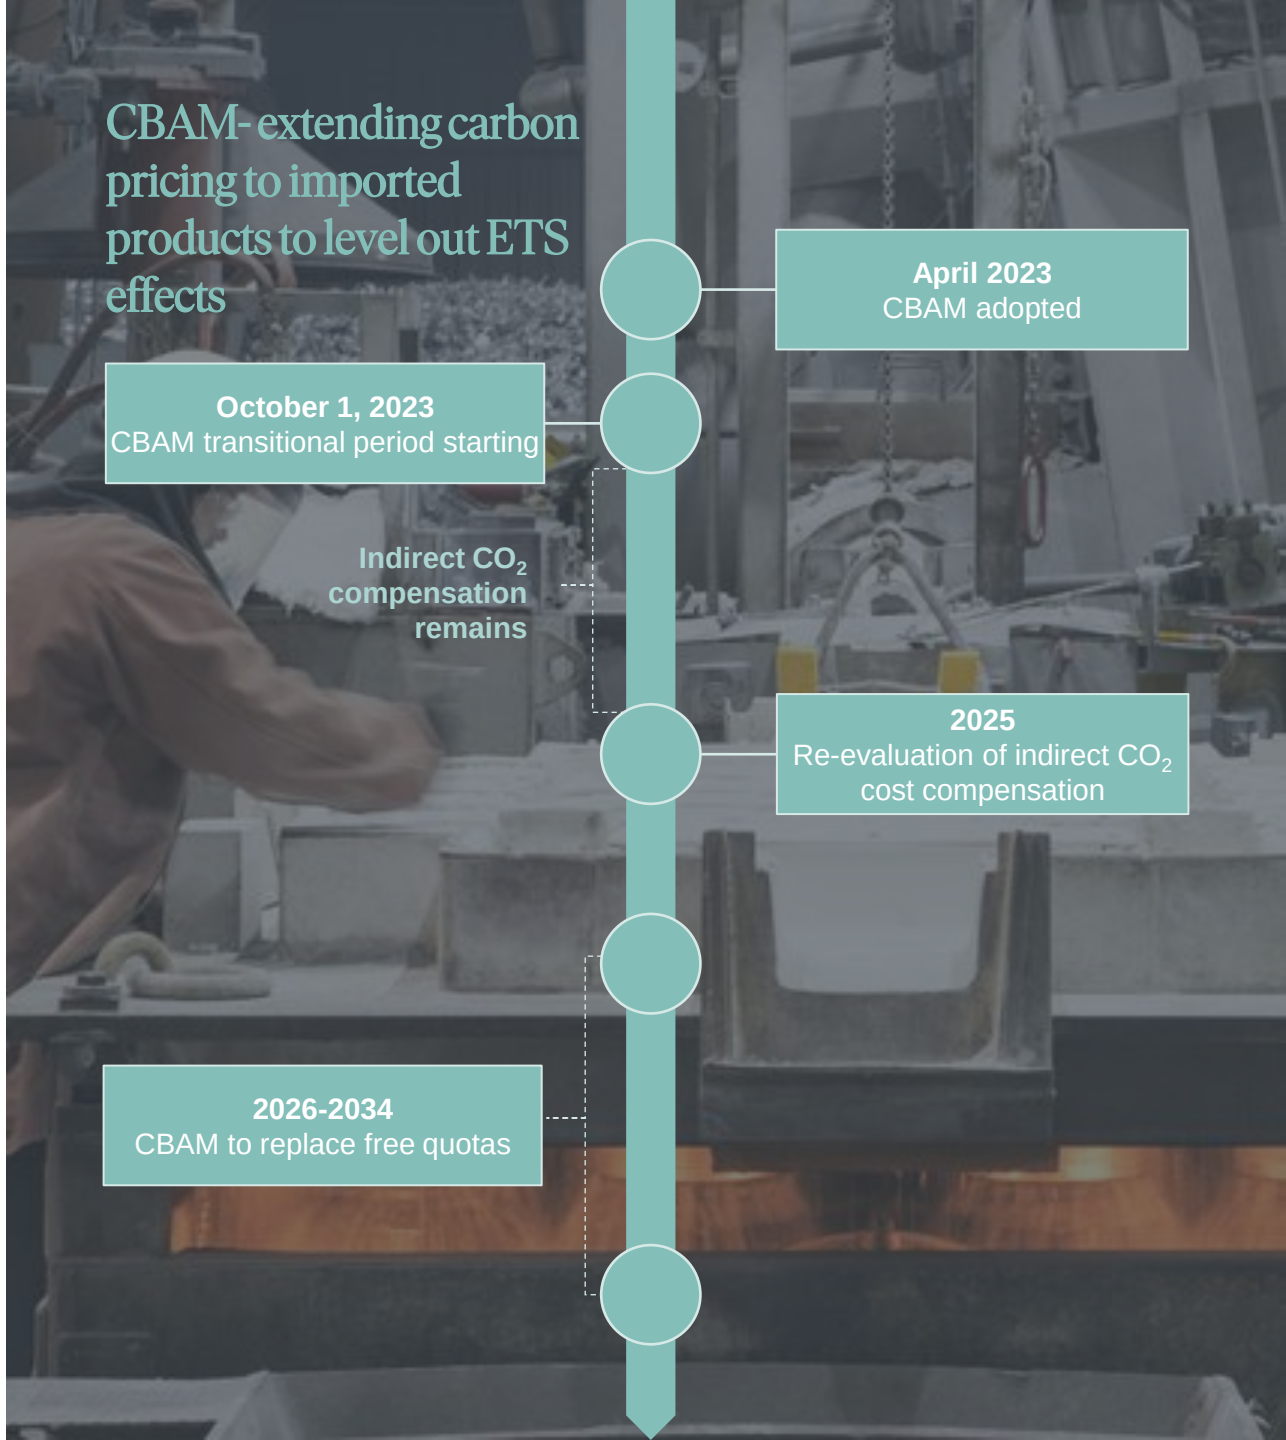
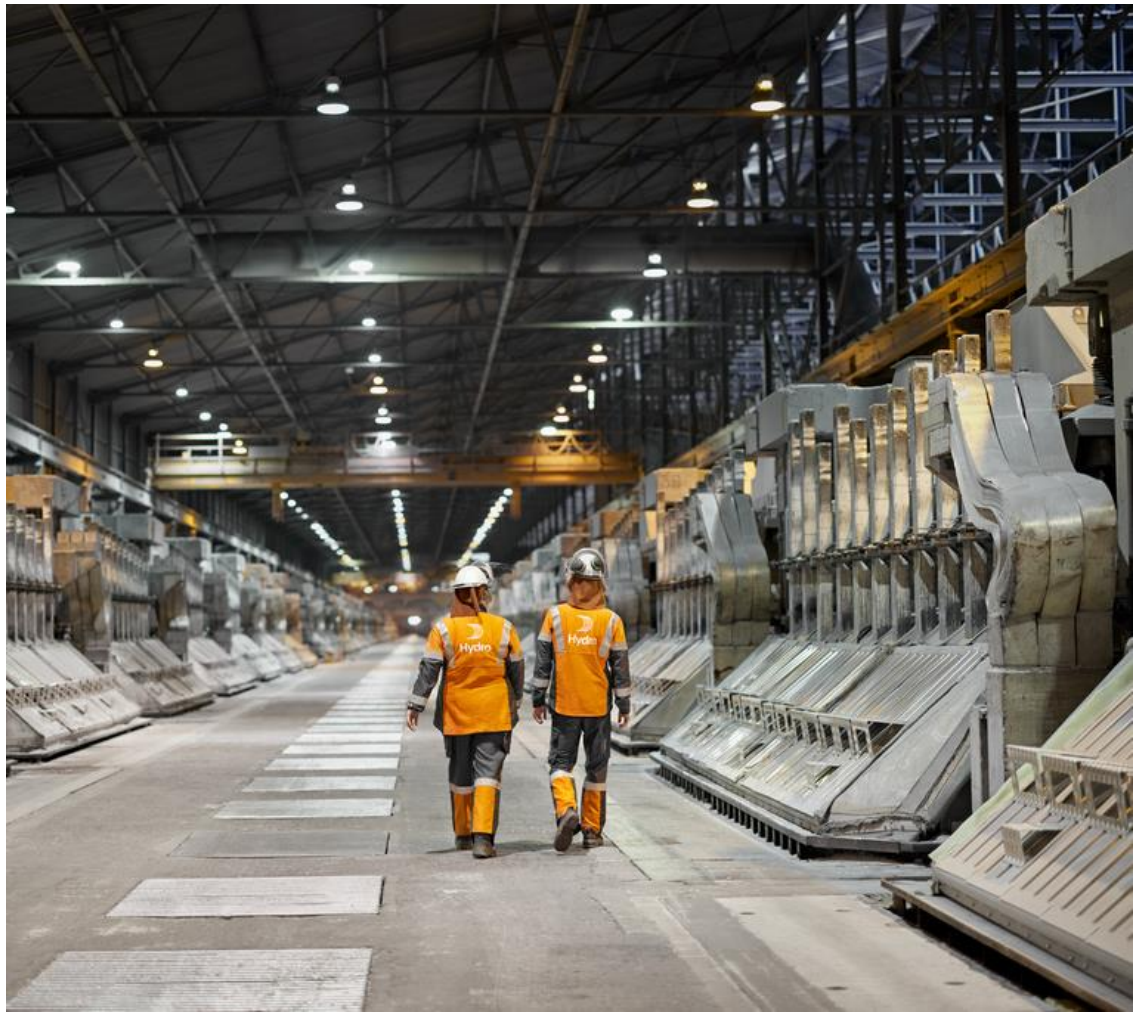
Scrap loophole undermines CBAM and climate goals

- The Carbon Border Adjustment Mechanism (CBAM) extends ETS carbon pricing to import products from 2026, protecting EU industry from carbon leakage.
- As part of the scheme, CBAM will recognize and price emissions from imported aluminium based on re-melted industrial scrap.
- Correct allocation of carbon emissions in products is necessary for CBAM to mirror the EU-ETS and function properly.
- We believe re-melted industrial scrap should be assigned the same emissions as primary aluminium. EU producers pay for these emissions, so should importers.
- Currently, CBAM does not recognize that re-melted industrial scrap has carbon emissions.
- The loophole is substantial, as there are more than enough re-melted industrial scrap available globally to satisfy EU aluminium demand.
- Furthermore, the loophole undermines low-carbon aluminium production in Europe, and deprives Member States of CBAM revenue.
- European recyclers are facing the biggest risk from the loophole.



EU agenda supporting Hydro's strategy



Regulatory framework supporting strategic direction

Critical Raw Material Act

- Aluminium expected to be defined as a Strategic Raw Material upon final adoption
- Important recognition of aluminium's role for EU strategic autonomy and the green transition

Sustainability legislation

- Stricter regulations on Green Claims and Corporate Sustainability Due Diligence favor sustainability frontrunners
- End-of-life vehicles regulation supports Hydro's recycling ambitions

Renewable energy

- High ambitions for renewable energy production in EU
- Supports Hydro's internal decarbonization and strengthens demand for aluminum from renewables market segment

Regulatory changes needed to support green transition

CBAM – Carbon Border Adjustment Mechanism

- Labelling remelted industrial scrap as zero-carbon material on import creates a large loophole in CBAM
- Unless changed it will undermine intention of CBAM on climate and competetiveness

Securing level playing field

Three key challenges and solutions for CBAM to 2040

1. Scrap loophole

- Imports based on remelted industrial scrap is assigned zero emission, creating a giant loophole
- CBAM must recognize the emissions from imported, re-melted industrial and process scrap

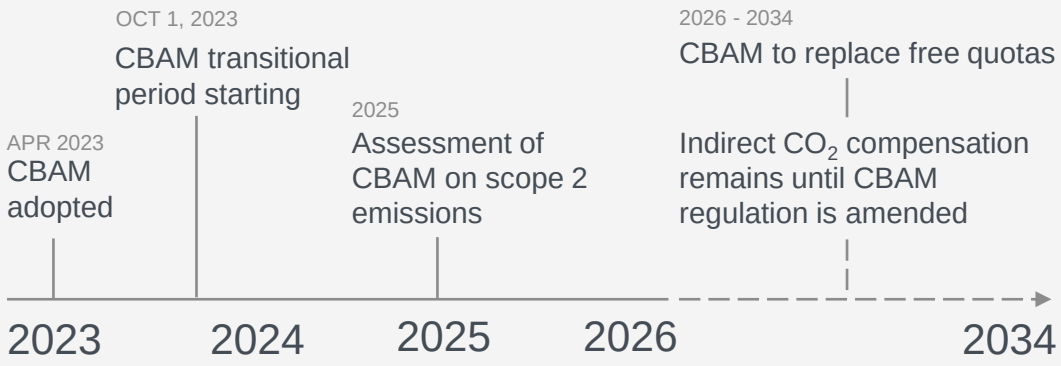
2. Product scope

- Products outside the CBAM scope are at clear risk of carbon leakage
- The product scope must be expanded to more aluminium products and other materials

3. Negative impact on EU smelters

- If implemented, CBAM on scope 2 will have a negative impact on EU smelters running on low-carbon electricity
- CO_2 compensation is superior both as climate and carbon leakage instrument

CBAM: Extending carbon pricing to imported products to level out ETS effects



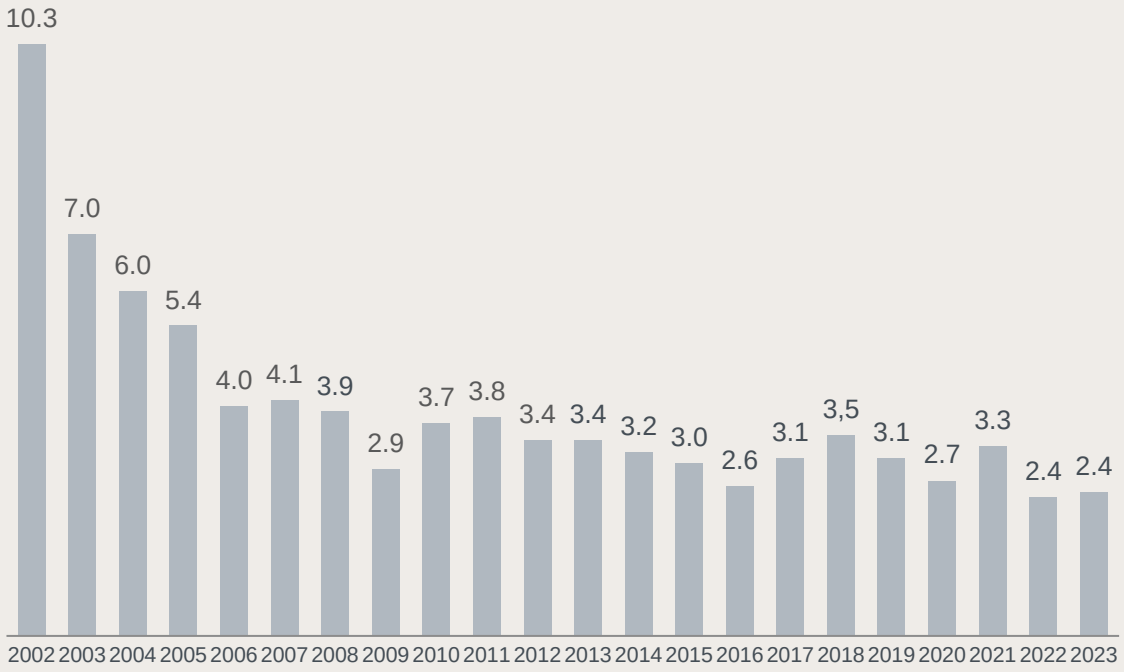
Hydro

Sustainable Operations

Safe and responsible operations is a top priority

Leadership in health and safety, social responsibility, and compliance as a license to operate

TRI Rate[1)]



1) Total recordable incidents (TRI) rate defined as cases per 1 million hours worked, for own employees and contractors

Continuing efforts within ESG performance

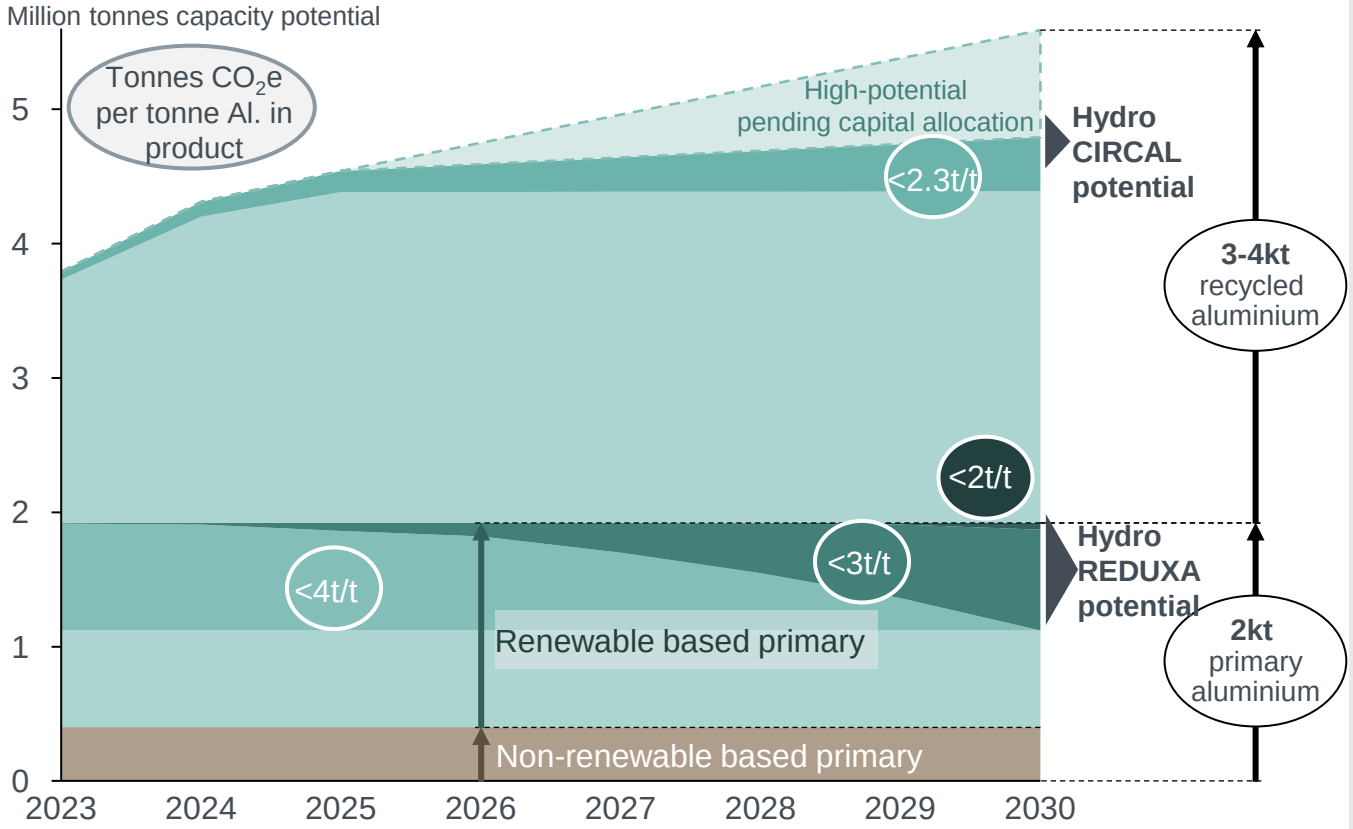
Positioning Hydro to pioneer the green aluminium transition

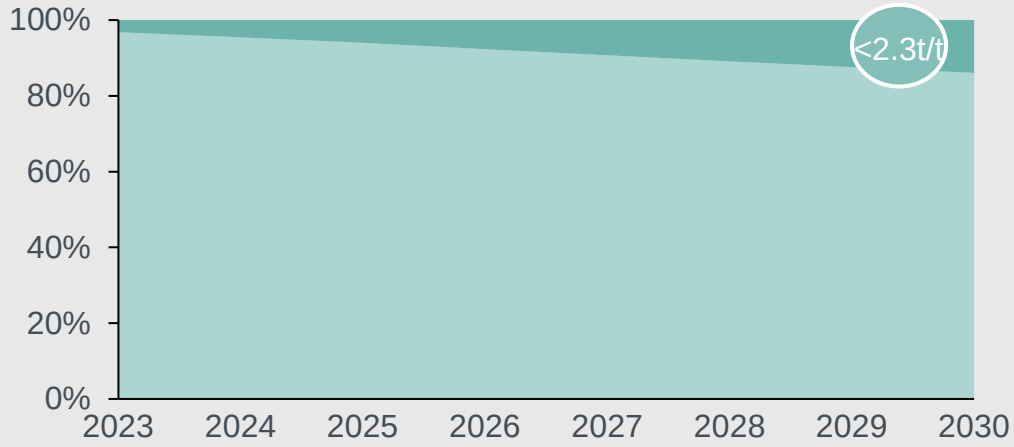
Earnings uplift potential 2030 of NOK 2 billion[1)]

Greener product capability from total aluminium portfolio[1)]

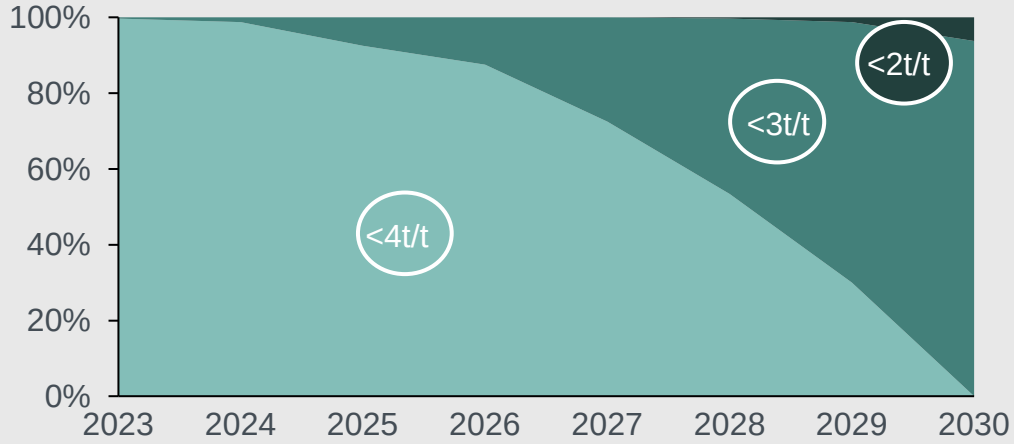


1) Based on 2030 EU ETS cost and relative CO_2 reduction vs Hydro REDUXA 4.0 at current industry traded upcharge. Hydro REDUXA and CIRCAL potential based on estimated certification capacity. Primary capacity based on equity share renewable power. Hydro CIRCAL products have post-consumer scrap content > 75%

Growing recycling capabilities



Transforming REDUXA portfolio



Execute on ambitious decarbonization and technology road map, step up to contribute to nature positive and a just transition

Climate

Forcefully deliver on net-zero roadmap, decarbonizing our value chain from mine-to-components

- Net-zero scope 1 and 2 GHG emissions by 2050 or earlier
- On track to meet 30 percent reduction in scope 1 and 2 CO2e by 2030
- 30% reduction of upstream scope 3 GHG emissions per tonne aluminium by 2030
- 850-1200 kTonnes post-consumer scrap recycling capacity by 2030

Nature

Contribute to a nature positive future through initiatives on biodiversity, emissions reduction and supply chain management

- No Net-Loss of biodiversity for our bauxite mine, from a 2020 baseline
- No Net-Loss of biodiversity for new projects
- 1:1 reforestation on track
- 50% reduction in material non-GHG emissions by 2030
- Eliminate landfill of all recoverable waste by 2040

Social

Improve lives and livelihoods wherever we operate by supporting a just transition

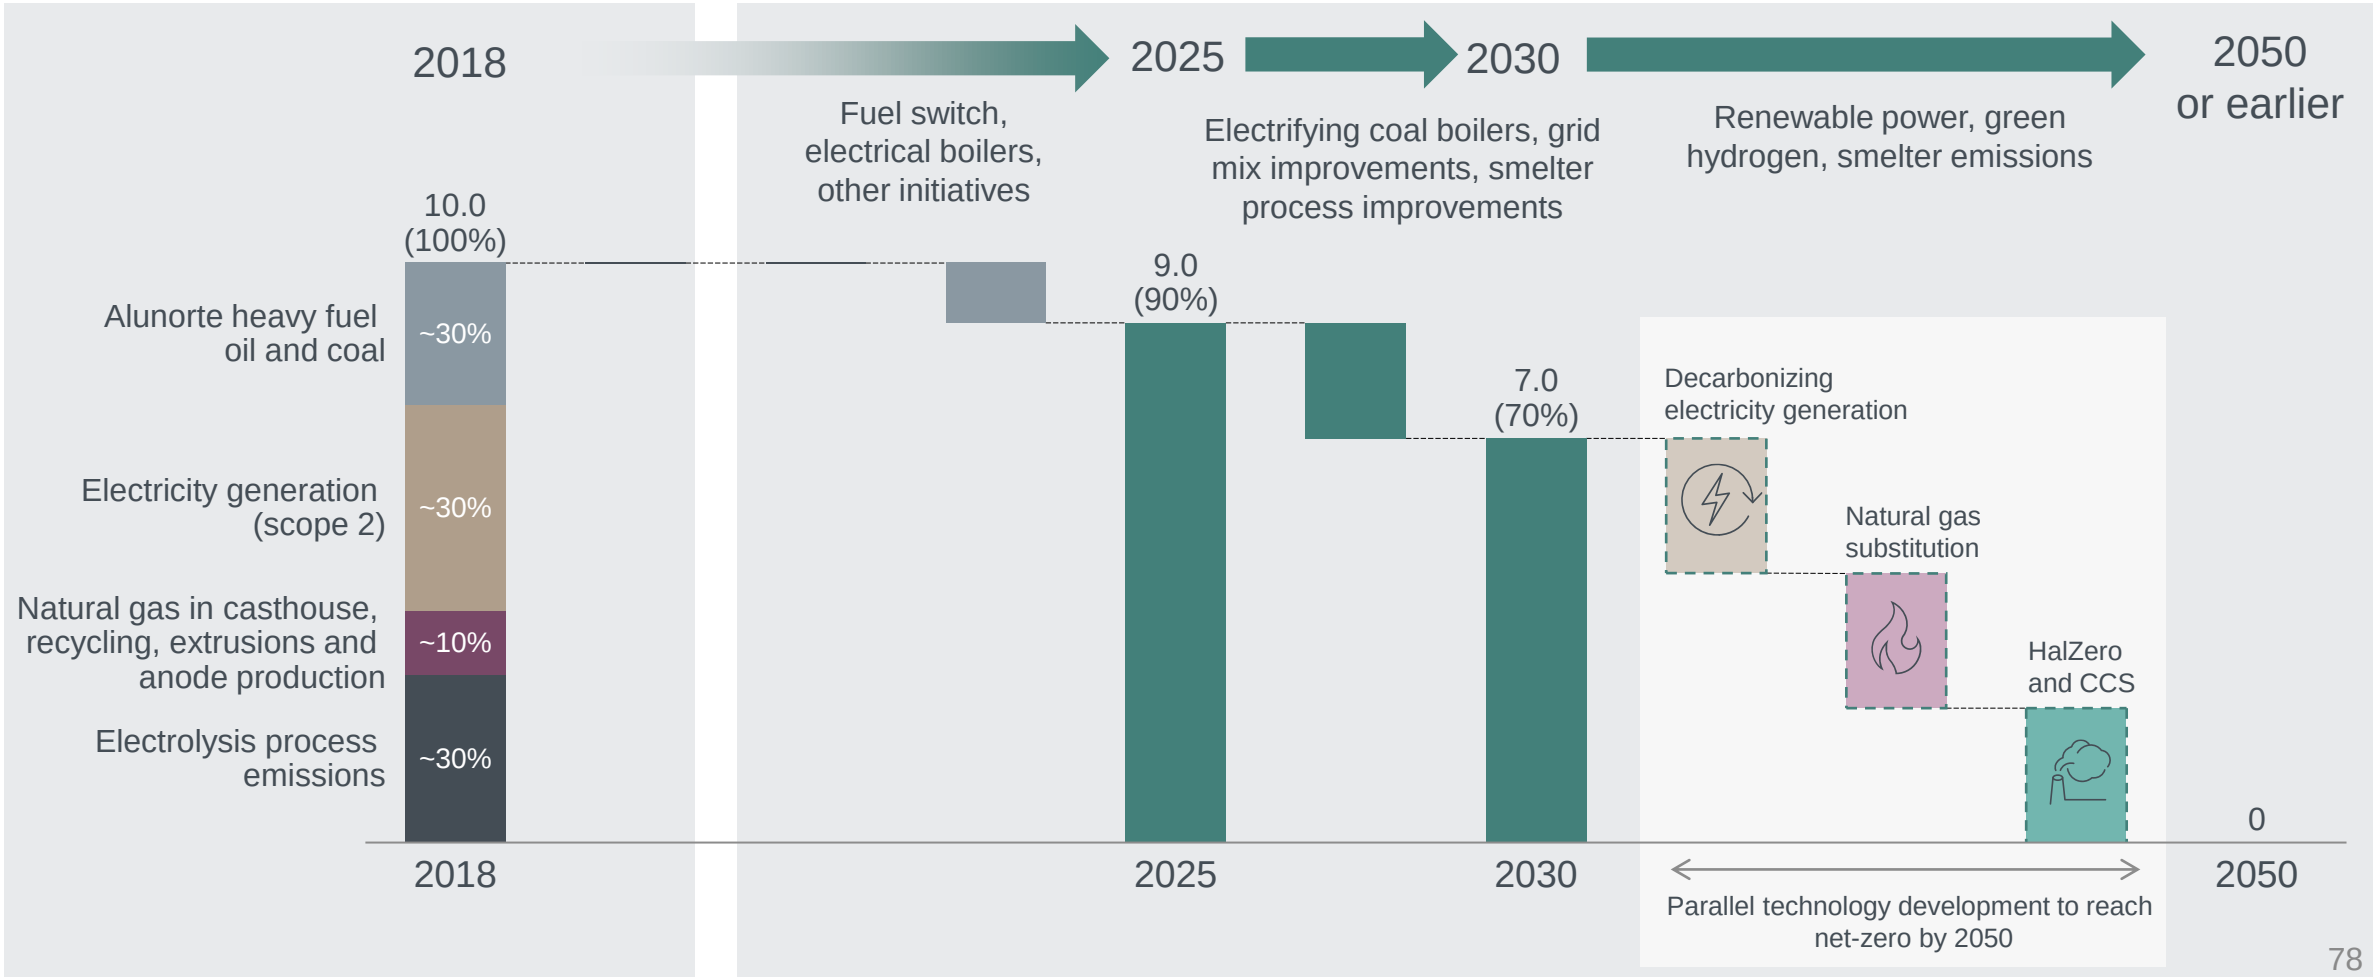
- On track to deliver on target of empowering 500,000 people with skills and education by 2030
- Significant social projects completed in Brazil
- Transparency and traceability of key product sustainability data by 2025 or earlier

Net-zero Hydro: The roadmap

On track to achieve 30% carbon emissions reduction by 2030 and net-zero by 2050 or earlier

GHG emissions – ownership equity[1)]

Million tonnes CO_2e (% of 2018 baseline emissions[2)])



1) Scope 1 and scope 2. 2) 2018 rebased baseline post-Alunorte transaction as of December 1, 2023

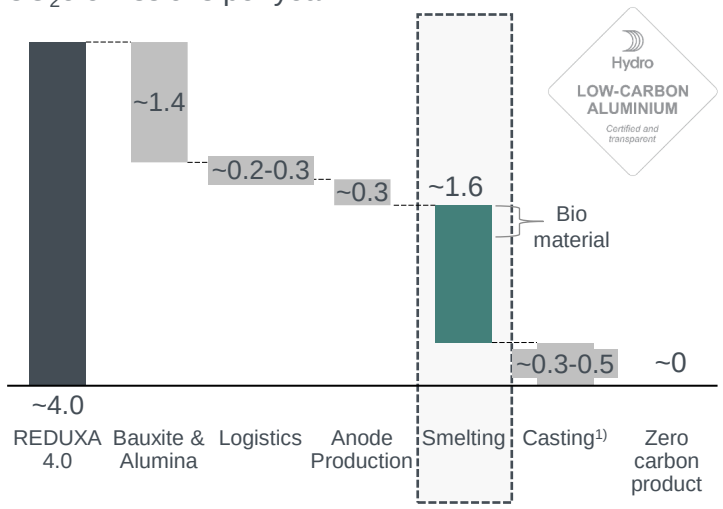
Decarbonization ambition: Three paths to net-zero

Clear technology roadmap to deliver industrial volumes of zero-carbon aluminium by 2030

HalZero process

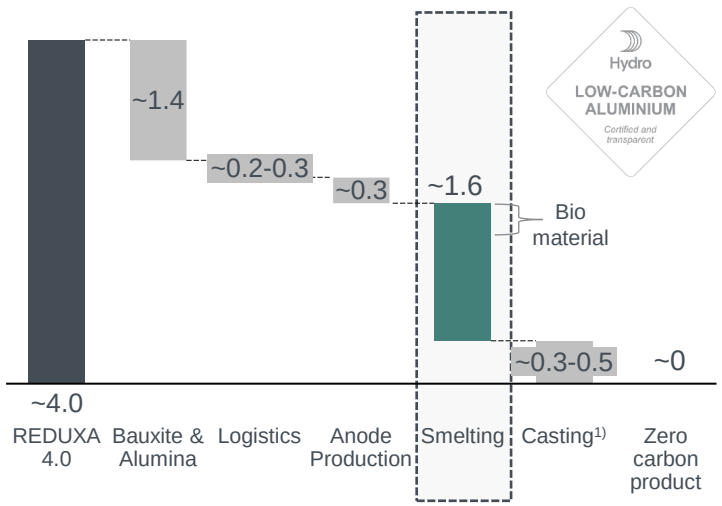
New process technology for decarbonizing new capacity

CO_2e emissions per year



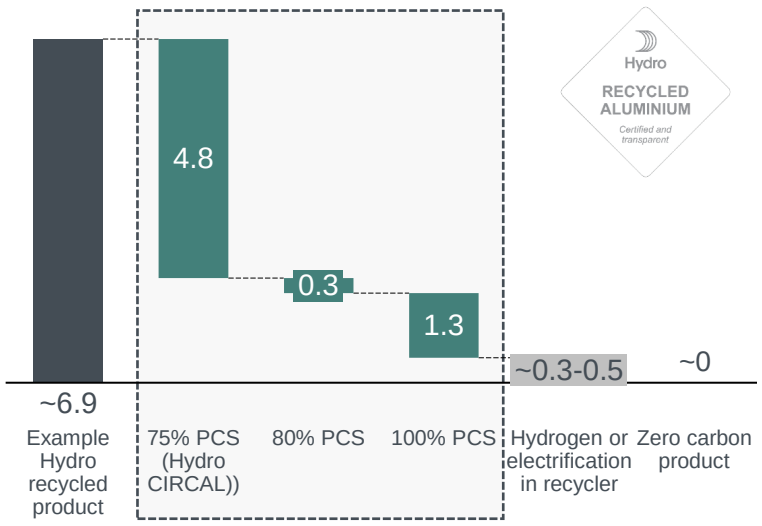
Carbon capture and storage

Technologies for decarbonizing existing smelters



Recycling

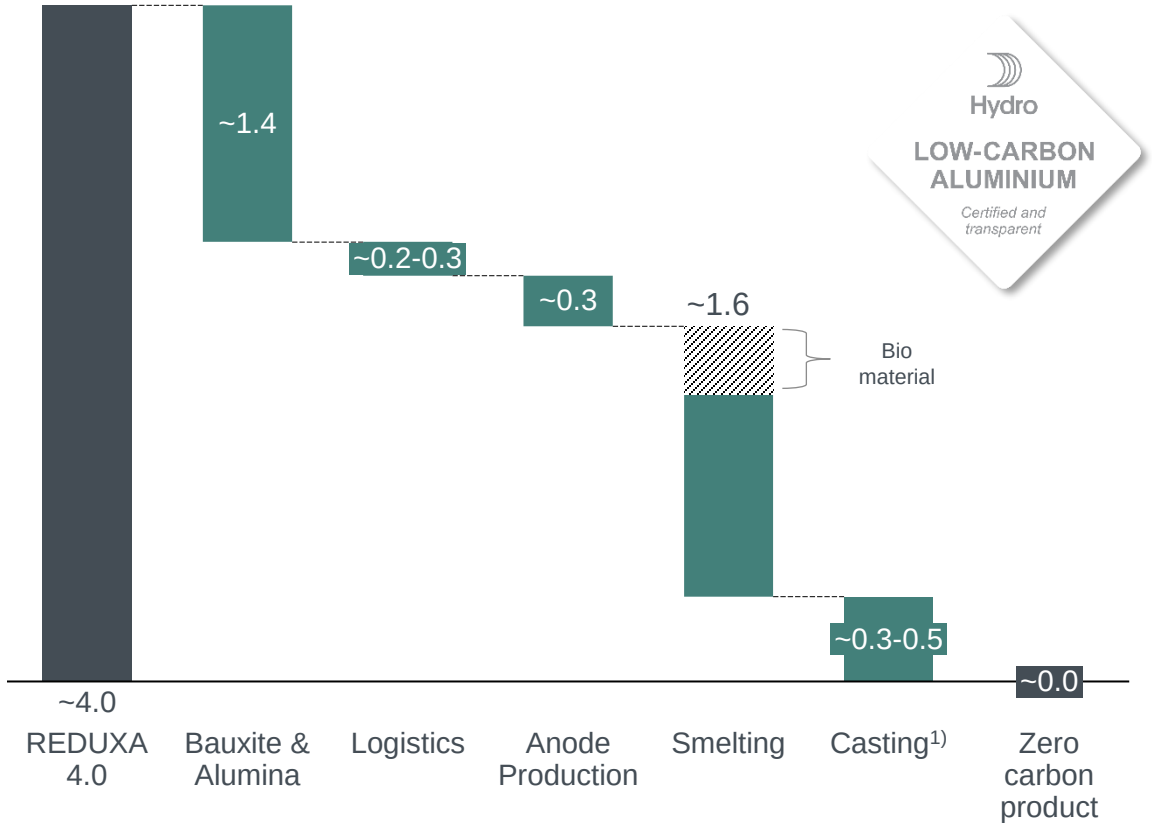
Technologies for more PCS-use



Widening our scope to reach zero CO_2 emissions

Structured approach to reduce emissions throughout primary value chain

CO_2e emissions kgCO_2/kgAl



1) Casting includes cold metal remelting

Renewable power is crucial for our path to net-zero

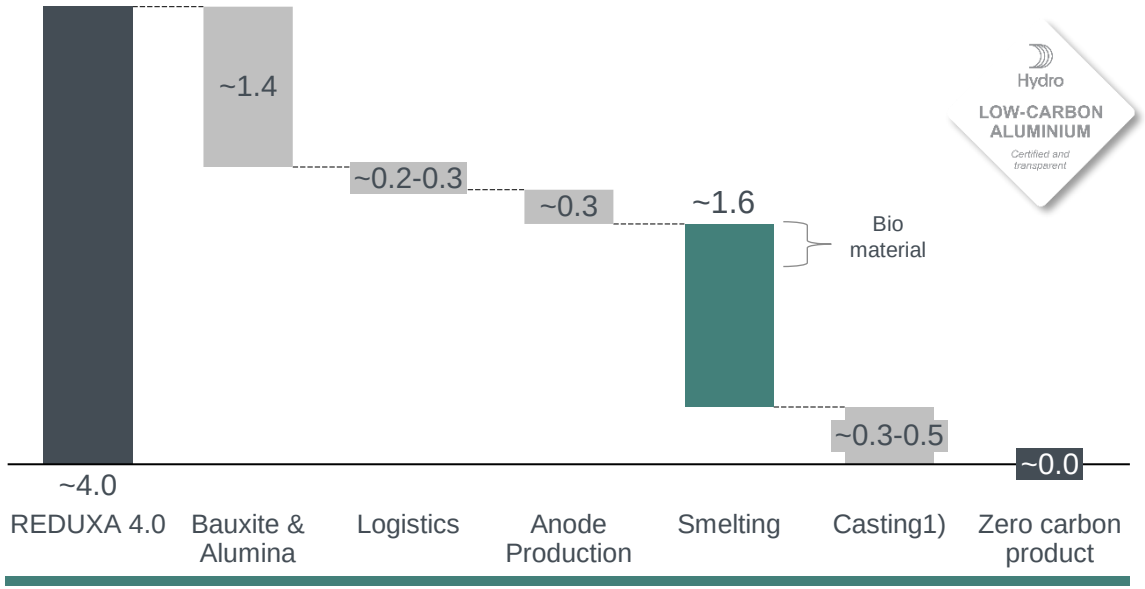
Pursuing optionality **across value chain.** Initiatives **on track**

Introducing **greener anode program**

Increased focus on shipping emissions resulting in **further reduction potentials**

Electrolysis decarbonization on track - HalZero

CO_2e emissions kgCO_2/kgAl



Timeline

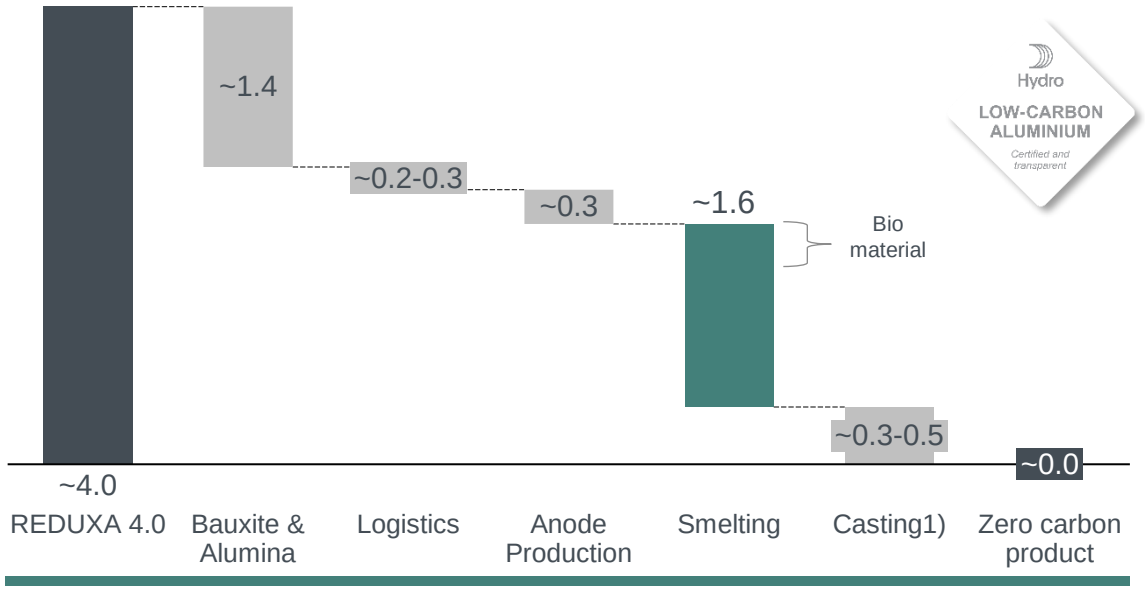
1) Casting includes cold metal remelting

Ground-breaking technology to change the game

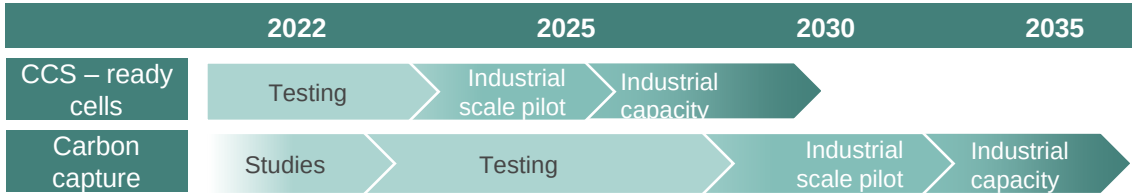
- Approval to start construction of new test facility in Porsgrunn - expected to be operational by 2025
- On track for first metal by end 2025 and industrial pilot volumes by 2030

Electrolysis decarbonization on track – carbon capture

CO_2e emissions kgCO_2/kgAl

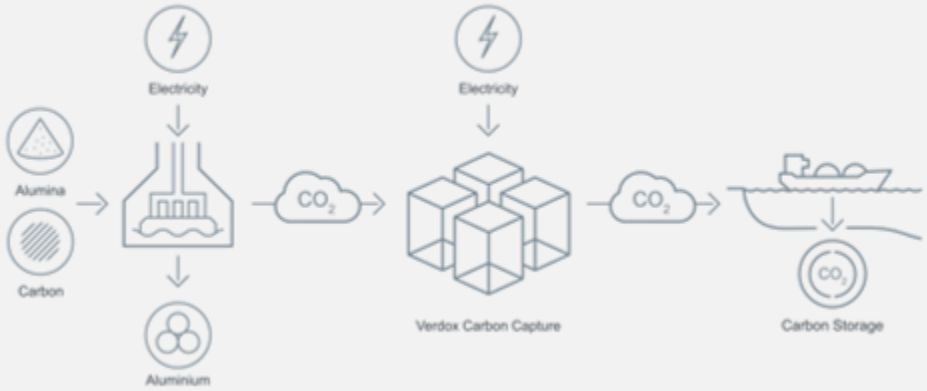


Timeline



1) Casting includes cold metal remelting

Technology shift for existing aluminium smelters

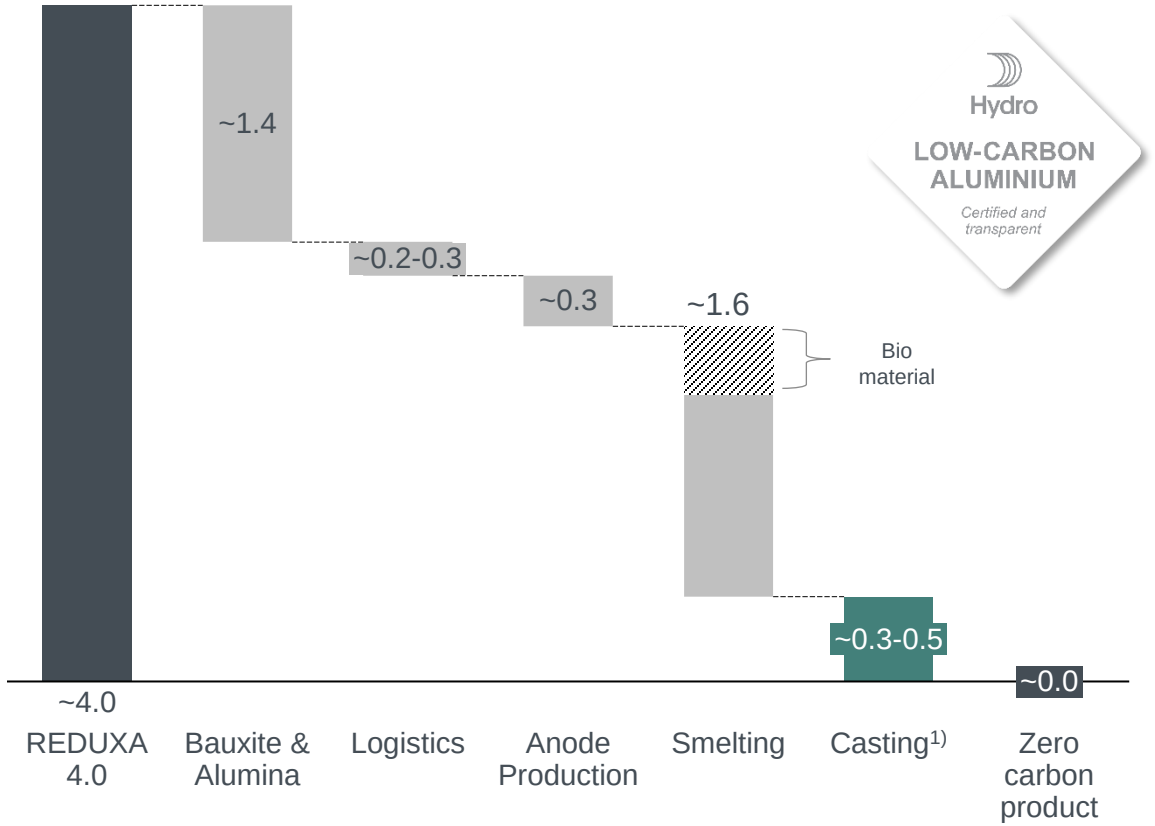


- Testing of Verdox technology ongoing at Sunndal
- Installing capture ready cells as part of ongoing relining process
- On track to deliver first CO_2 capture in 2024 and industrial scale pilot volumes by 2030

Pursuing optionality to decarbonize casthouses

Important milestones for all initiatives: Bio-methane, hydrogen and direct electrification

CO_2e emissions kgCO_2/kgAl



1) Casting includes cold metal remelting

Starting industrialization of bio-methane from 2024, stepping up activities in electrification

Bio-methane
- Introducing bio-methane at Sunndal plant – Commercial agreement with Havila to deliver from 2024

Hydrogen tests and pilots:
- Navarra test 2023– successful
- Årdal PFA Test
- Høyanger Recycling hydrogen pilot

Direct electrification pilots:
- Sunndal Plasma Pilot
- Høyanger Recycling Electrification Pilot

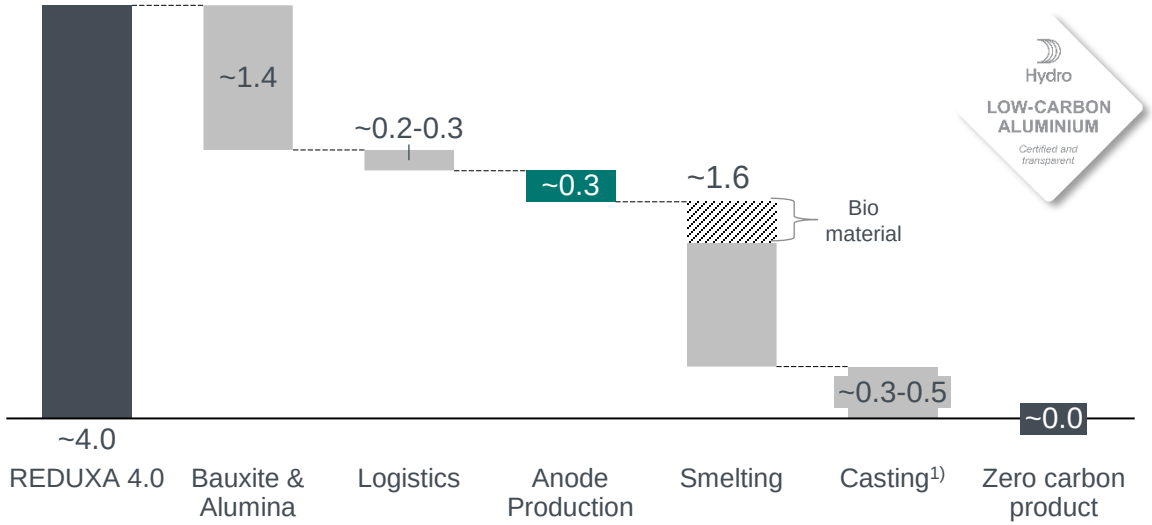
Timeline

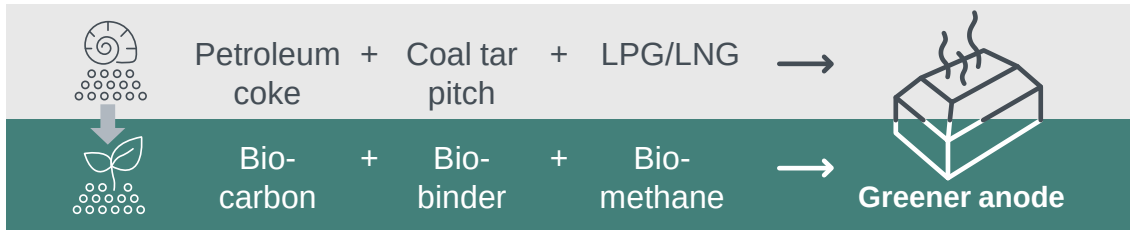
	2024	2025	2026	2027
Bio-methane	Industrialization			
Hydrogen	Tests and pilots	Industrialization		
Direct electrification	Studies	Tests and pilots	Industrialization	

Anode decarbonization

Utilizing bio-materials in anode production triggers potentials for below zero emissions

CO_2e emissions kgCO_2/kgAl





1) Casting includes cold metal remelting

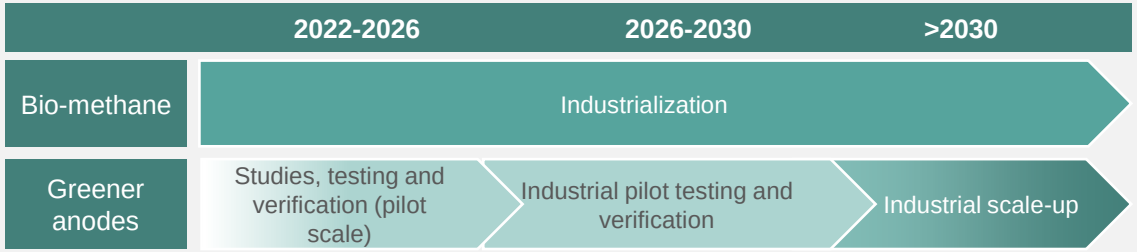
Bio-methane and bio-materials in the process

- Fuel switch to bio-methane in anode baking furnace – Havila contract
- Substitution to bio-based packing materials

Bio-materials in anodes

- Substitute fossil materials to bio-carbon and bio-binder in anode
- Potential to reduce the CO_2, PAH and S emissions
- Collaboration with external suppliers and research institutions
- Potential below zero CO_2 emissions from electrolysis off-gas capture

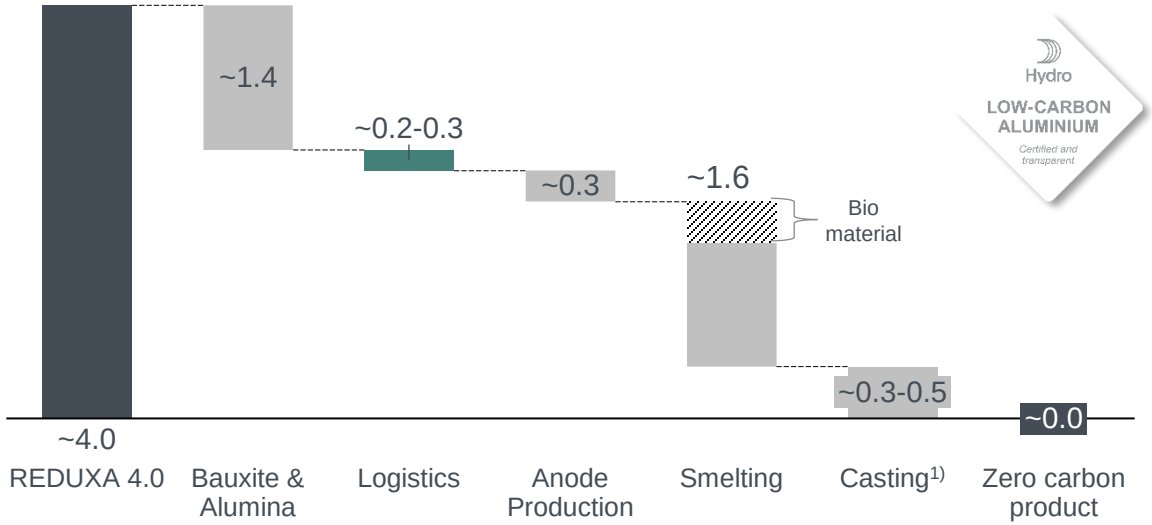
Timeline



Logistics decarbonization

Choosing the right solutions leads to reduced emissions. Ambition: 30% reduction by 2030

CO_2e emissions kgCO_2/kgAl



1) Casting includes cold metal remelting

What we have done

- >95% of AM volumes now have the major transport leg by sea
- 85% emission reduction on container transport from China to Europe
- Moving volumes from truck to barge, rail and sea
- Introducing biofuel on selected trucking routes
- Supply chain improvements

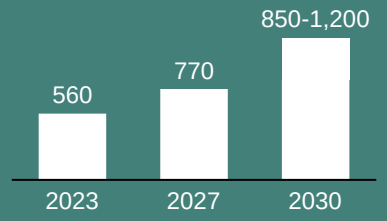
What we will do

- Developing greener routes
- Exploring opportunities for “green shipping corridors”
- Digitalization and measurement to improve incentive structures and transparency

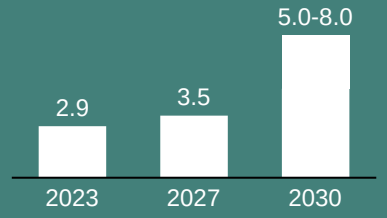
Timeline

	2023	2026	2030
Greener land transport / operation	Biofuel and solar opportunities		Greener fuels / electrification
Greener sea transport	From land to sea	Greener opportunities	Greener routes / corridors

Recycling 2030 ambitions:



850-1,200
kmt PCS capacity



NOK **5-8** billion
EBITDA potential

Recycling decarbonization

Hydro

Full value chain with multiple product outlets
- Large recycling asset base in Europe and North America
- Broad range of products – extrusion ingot, sheet ingot, foundry alloys, HyForge, Master alloys
- Ability to utilize and upcycle mixed scrap

Sorting & production technology
- Technical and metallurgical competence
- Production optimization know-how from scrap to product
- Patented HySort technology, in-house R&D

Close customer & supplier relations
- Local presence and market insight in core locations
- Established relationships with scrap suppliers
- Partnerships and close cooperation with customers
- Commercial intelligence and strong value chain positioning

Recycling path

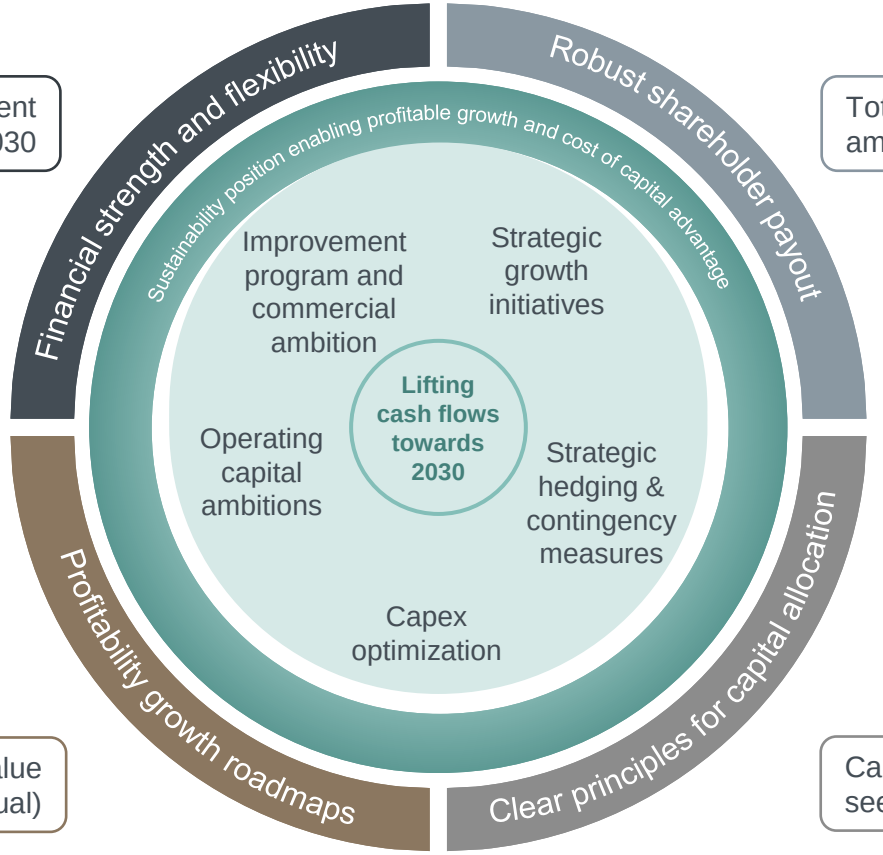
Solid framework for lifting returns and cash flow and managing uncertainty

NOK 8.5 billion — Strengthening improvement and commercial ambition 2024 - 2030

25% — Exposure in 2024-2025 secured through integrated hedging program

17% ARoaCE[1)] — Robust profitability growth roadmap navigating/despite challenging markets

NOK 2 billion — Greener value uplift potential across the value chain supporting profitability (2030, annual)



Total shareholder distribution since 2019 amounting to NOK 30.7 billion — NOK 30.7 billion

31% of the NOK 2 billion 2023/2024 share buyback program repurchased[2)] — 31%

Targeting stable working capital in 2024 — NOK 28 billion

Capital share allocated to growth and return seeking projects for the period 2024 - 2028 — 45%

1) Hydro group external scenario 2030 ARoaCE based on CRU price and premium assumptions and S&P Global FX assumptions, with adjustments as specified in the footnotes
2) 31% repurchased as of 24th of November

Capital allocated according to strategic modes

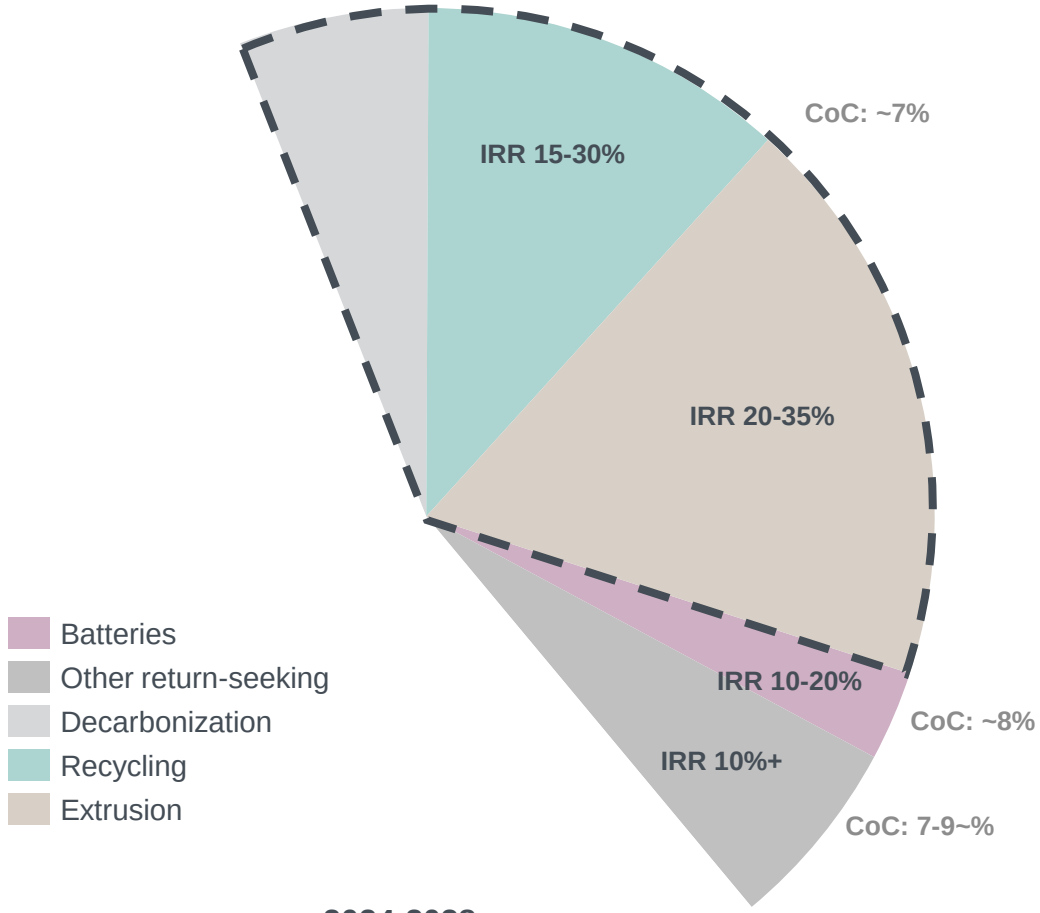
Strategic modes reflect global megatrends and high-return opportunities

Safe, compliant and efficient operations The Hydro Way

	Bauxite & Alumina	Aluminium Metal	Recycling	Energy	Extrusions
Businesses					
Strategic mode	Sustain and improve	Sustain and improve	Growth	Selective growth	Growth
Towards 2030	Reduce risk, improve sustainability footprint, improve cost position	Robustness and greener, increase product flexibility, improve cost position	Substantial shift in conversion of post-consumer scrap	Growth in renewables and batteries	Growth with new capacity and capabilities

Strong profitability in strategic growth areas

Indicative profitability in current return-seeking and growth portfolio



Recycling

- Increase proportion of post consumer scrap (PCS), lowering metal cost
- Improved economies of scale in brownfield expansions
- Sorting technology and equipment standardization

Extrusions

- New presses with improved capabilities and commercial value, capturing market share
- Press replacements with significant cost reductions and increased productivity
- Focus on high growth segments including automotive, systems business and commercial transportation

Decarbonization

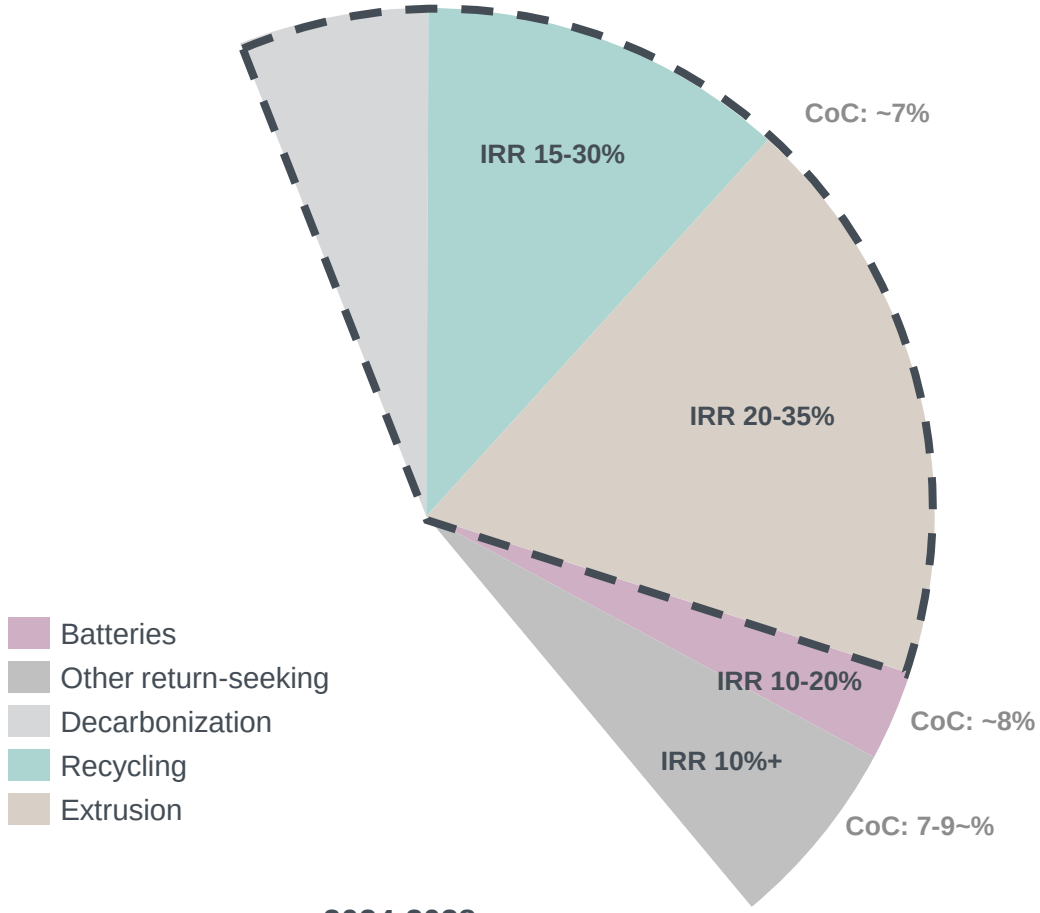
- Alunorte Fuel switch project (IRR 20+%) and electrical boilers
- Carbon capture technology pilots in mid-term, industrial scale pilot volumes by 2030
- HalZero as technology pilots in mid-term, industrial scale pilot volumes by 2030

Batteries

- Focused strategy within sustainable battery materials, leveraging Hydro capabilities
- Establish positions in attractive growth segments in core markets
- Core investments: Hydrovolt (recycling) and Vianode (anode material)

Press replacements giving new capabilities and cost savings

Indicative profitability in current return-seeking and growth portfolio



2024-2028 capex

Press consolidation

	Two old presses	One new press
Manning	2 x 8 FTEs per shift	4-5 FTEs per shift
Maintenance cost p.a.	EUR 1,500K	EUR 350-450K
Downtime	15-20%	5-10%
Scrap rate	33-35%	25-28%
Annual production	2x9K tonnes	16K tonnes

Based on cost savings alone **IRR: 30%+**

Benefits

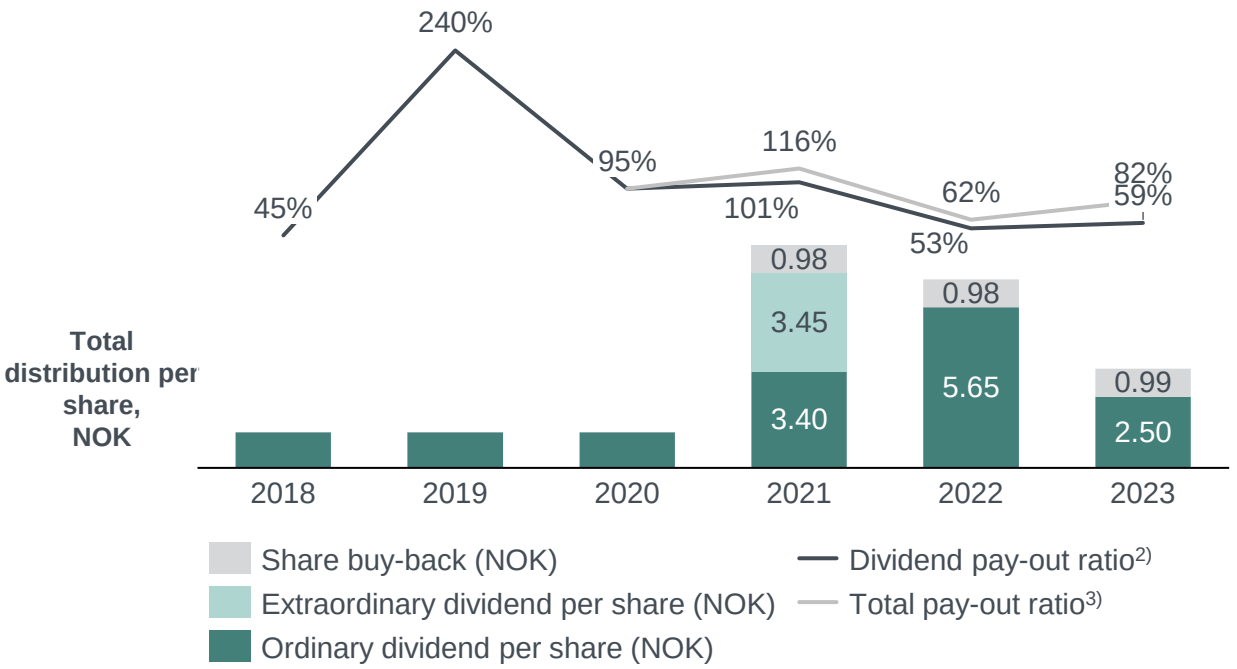
- Higher levels of automation and better ergonomics, state-of-the-art technology.
- New and improved technical capabilities to serve new segments at higher prices
- High energy efficiency, lower cost per kilo & higher EBITDA per tonne

Shareholder and financial policy

- Aiming for competitive shareholder returns and dividend yield compared to alternative investments in peers
- Dividend policy
  - Average ordinary payout ratio: 50% of adjusted net income over the cycle
  - 1.25 NOK/share to be considered as a floor
  - Share buybacks and extraordinary dividends as supplement in periods with strong financials and outlook
  - Five-year average ordinary pay-out ratio 2018-2022 of ~74%
- Maintain investment-grade credit rating
  - Currently: BBB stable (S&P) & Baa3 with positive outlook (Moody's)
  - Competitive access to capital is important for Hydro's business model (counterparty risk and partnerships)
- Financial ratio target over the business cycle
  - Adjusted net debt to adjusted EBITDA < 2x

Historical shareholder distribution

	2018	2019	2020	2021	2022	2023
Dividend yield[1)]	3.2%	3.8%	3.1%	9.9%	7.7%	3.7%



Hedging policy

- **Overall risk policy**
  - Remain exposed to the inherent cash flow volatility related to Hydro’s business
  - Fluctuating with the market - volatility mitigated by strong balance sheet
- **Diversified business**
  - Vertical integrated value chain reducing risk and volatility
  - Strengthening relative position to ensure competitiveness
- **Upstream margin risk**
  - Currency exposure, mainly USD and BRL
  - Exposed to LME and Platts alumina index prices
  - Strategic and operational hedging with perspective of mitigating downside risk and securing margins (not opportunistic)
  - Operational LME hedging – one-month forward sale
- **Downstream margin risk**
  - Spread between customer prices and the underlying production cost
  - As such exposed to commodity prices, exchange rates, other costs, market conditions and negotiating power
  - Risk is managed through operational hedging programs

Integrated margin hedging realized a NOK 0.3 billion positive value in Q1-24

Aluminium hedges of 320-460 kt/yr 2024-25 in place

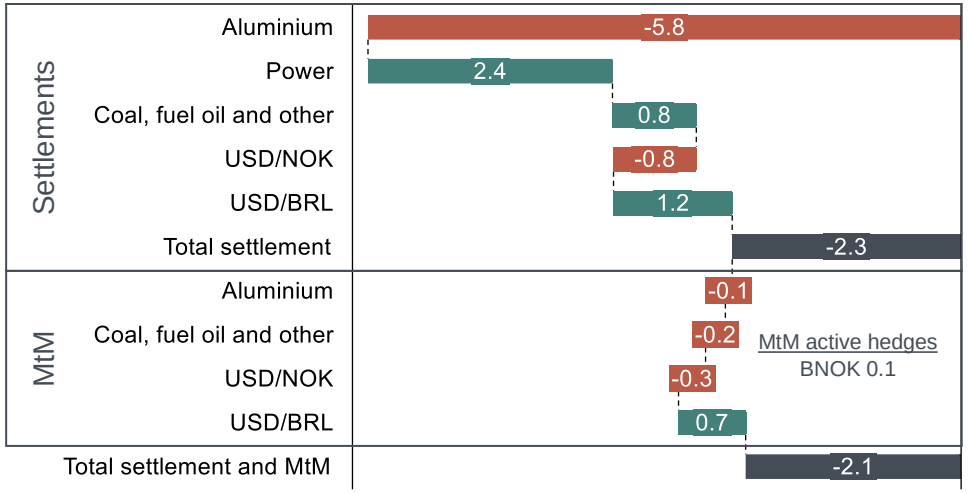
- 2024: 330 kt remaining at a price of ~2400 USD/t
- 2025: 320 kt hedged at a price of ~2500 USD/t
- Pricing mainly in NOK, with USD hedges converted to NOK via USD/NOK derivatives
- Corresponding raw material exposure partially secured using financial derivatives or physical contracts

B&A and AM BRL/USD Hedge

- USD 698 million sold forward for 2024-2026
  - 2024: USD 251 million remaining at avg. rate 6.19
  - 2025: USD 272 million hedged at avg. rate 5.33
  - 2026: USD 175 million hedged at avg. rate 5.48
- Aim to reduce volatility and uncertainty in Alunorte and Albras cash flows, as well as support robust cost curve positions

Strategic hedging status

NOK Billions



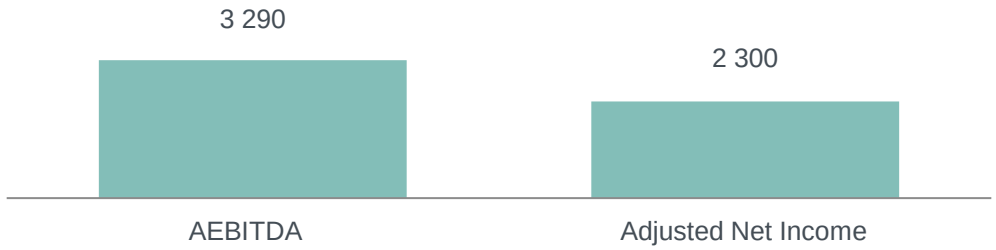
Utilizing Hydro's hedging policy to deliver on strategic ambitions

- Flexibility to hedge in certain cases
  - Support strong cost position
  - Strong margins in historical perspective, e.g., supporting ARoaCE target
  - Larger investments

Significant exposure to commodity and currency fluctuations

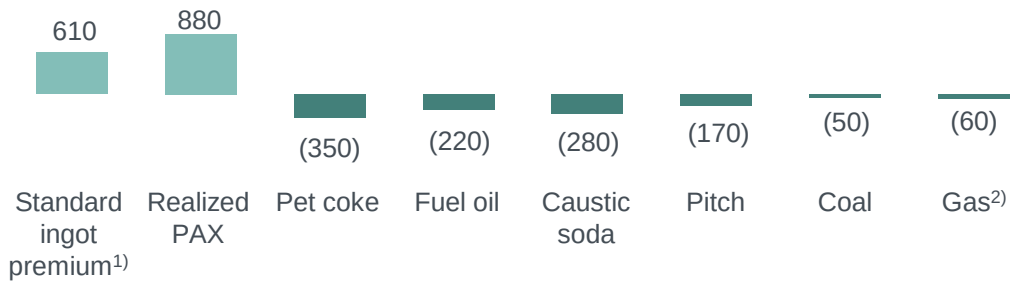
Aluminium price sensitivity +10%

NOK million



Other commodity prices, sensitivity +10%

NOK million



1) Europe duty paid. 2) Henry Hub

Currency sensitivities +10%

Sustainable effect:

NOK million	USD	BRL	EUR
AEBITDA	4,090	(990)	(100)

One-off reevaluation effect:

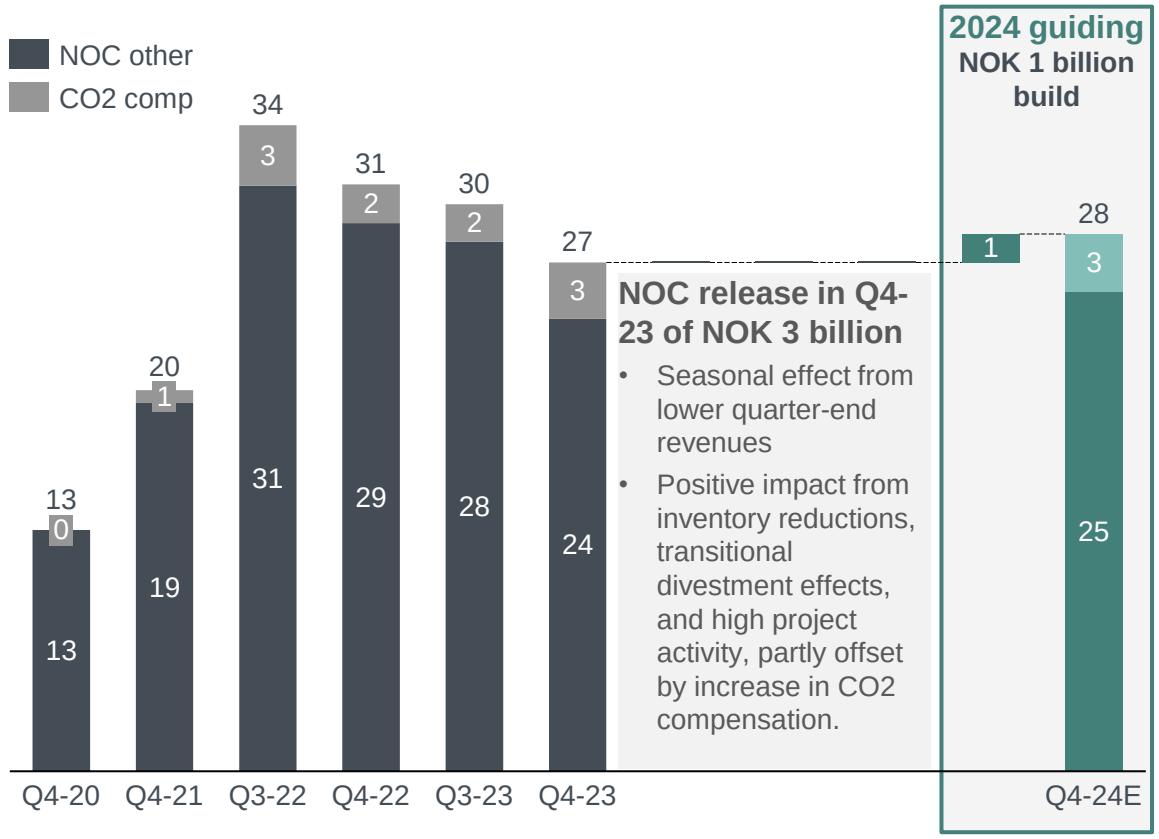
Financial items	(1,270)	1,490	(3,770)

- Annual adjusted sensitivities based on normal annual business volumes. LME 2,250 USD/mt, standard ingot premium (Europe duty paid) 285 USD/mt, PAX 365 USD/mt, fuel oil 840 USD/mt, petroleum coke 395 USD/mt, pitch 925 EUR/mt, caustic soda 385 USD/mt, coal 85 USD/mt, gas (Henry Hub) 2.56 USD/MMBtu, USDNOK 10.50, BRLNOK 2.12, EURNOK 11.41
- Aluminium price sensitivity is net of aluminium price indexed costs and excluding unrealized effects related to operational hedging
- BRL sensitivity calculated on a long-term basis with fuel oil assumed in USD. In the short-term, fuel oil is BRL-denominated
- Excludes effects of priced contracts in currencies different from underlying currency exposure (transaction exposure)
- Currency sensitivity on financial items includes effects from intercompany positions
- 2024 Platts alumina index (PAX) exposure used
- Adjusted Net Income sensitivity calculated as AEBITDA sensitivity after 30% tax
- Sensitivities include strategic hedges for 2024 (remaining volumes for 2024, annualized)

Targeting stable Net Operating Capital in 2024

Net Operating Capital[1)]

NOK billion

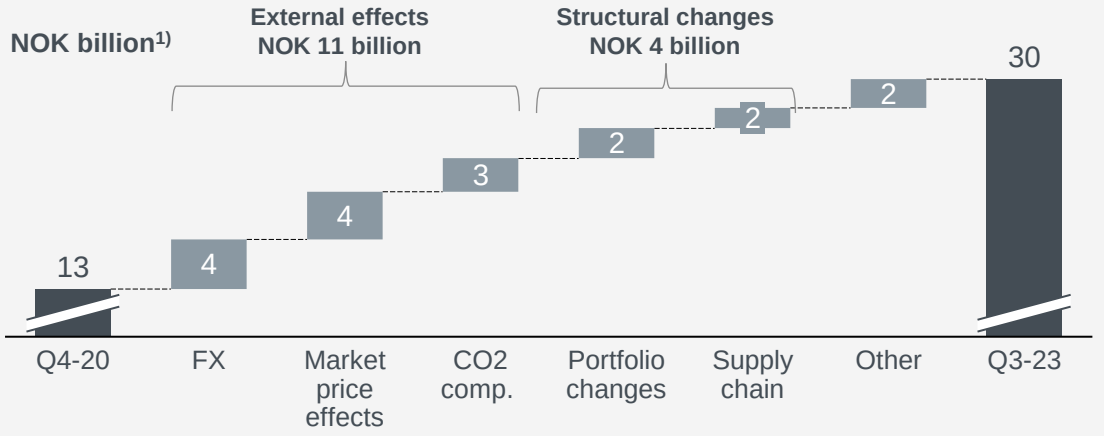


1) Net Operating Capital end of period.

Structural changes and market effects driving Net Operating Capital increase historically

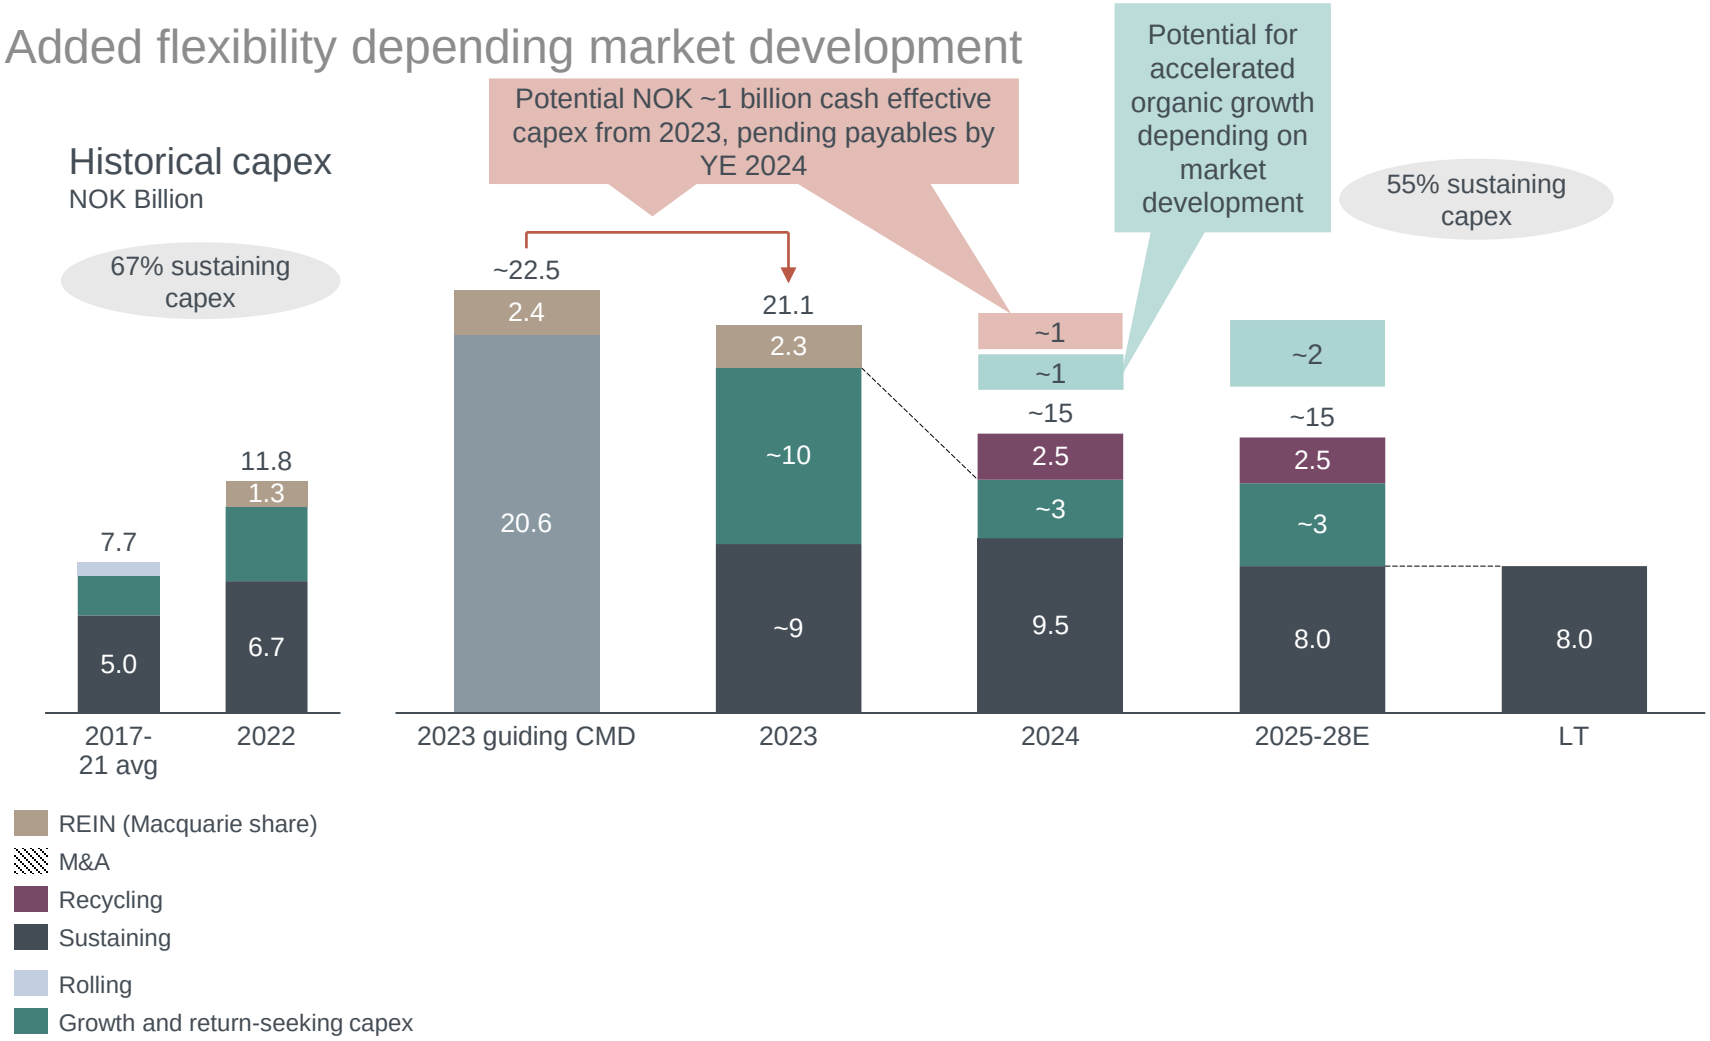
NOK 17 billion NOC increase since Q4-20 (until Q3-23)

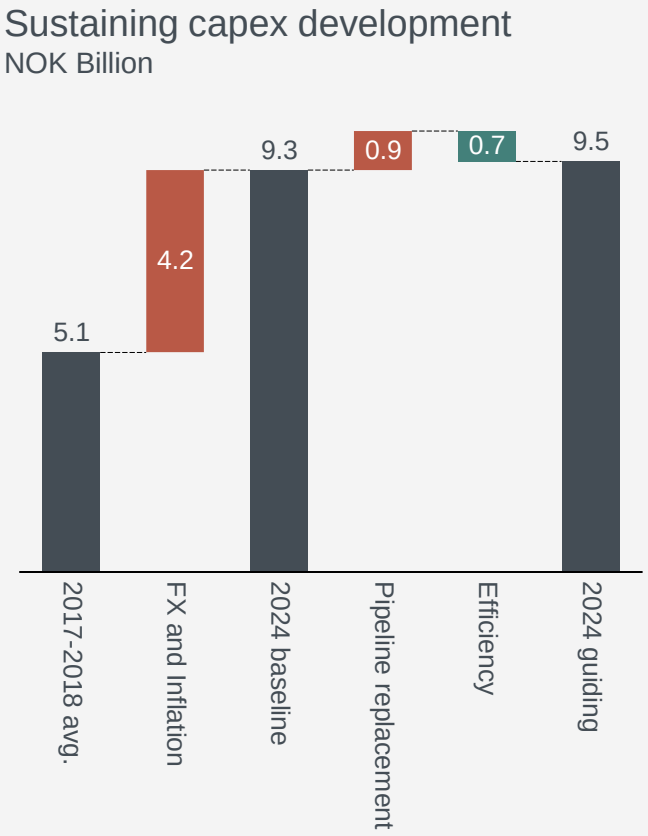
- Weakening reporting currency (NOK) (all BAs)
- Higher sales and raw material prices (all BAs)
- Introduction of CO2 compensation scheme (AM)
- Portfolio changes (AM, HE)
- Strategic supply chain changes (AM)
- M&A and growth
- Transitional inefficiencies due to restructuring and market volatility (AM, HE)



Underlying 2024 capex in line with last year's guidance

Added flexibility depending market development





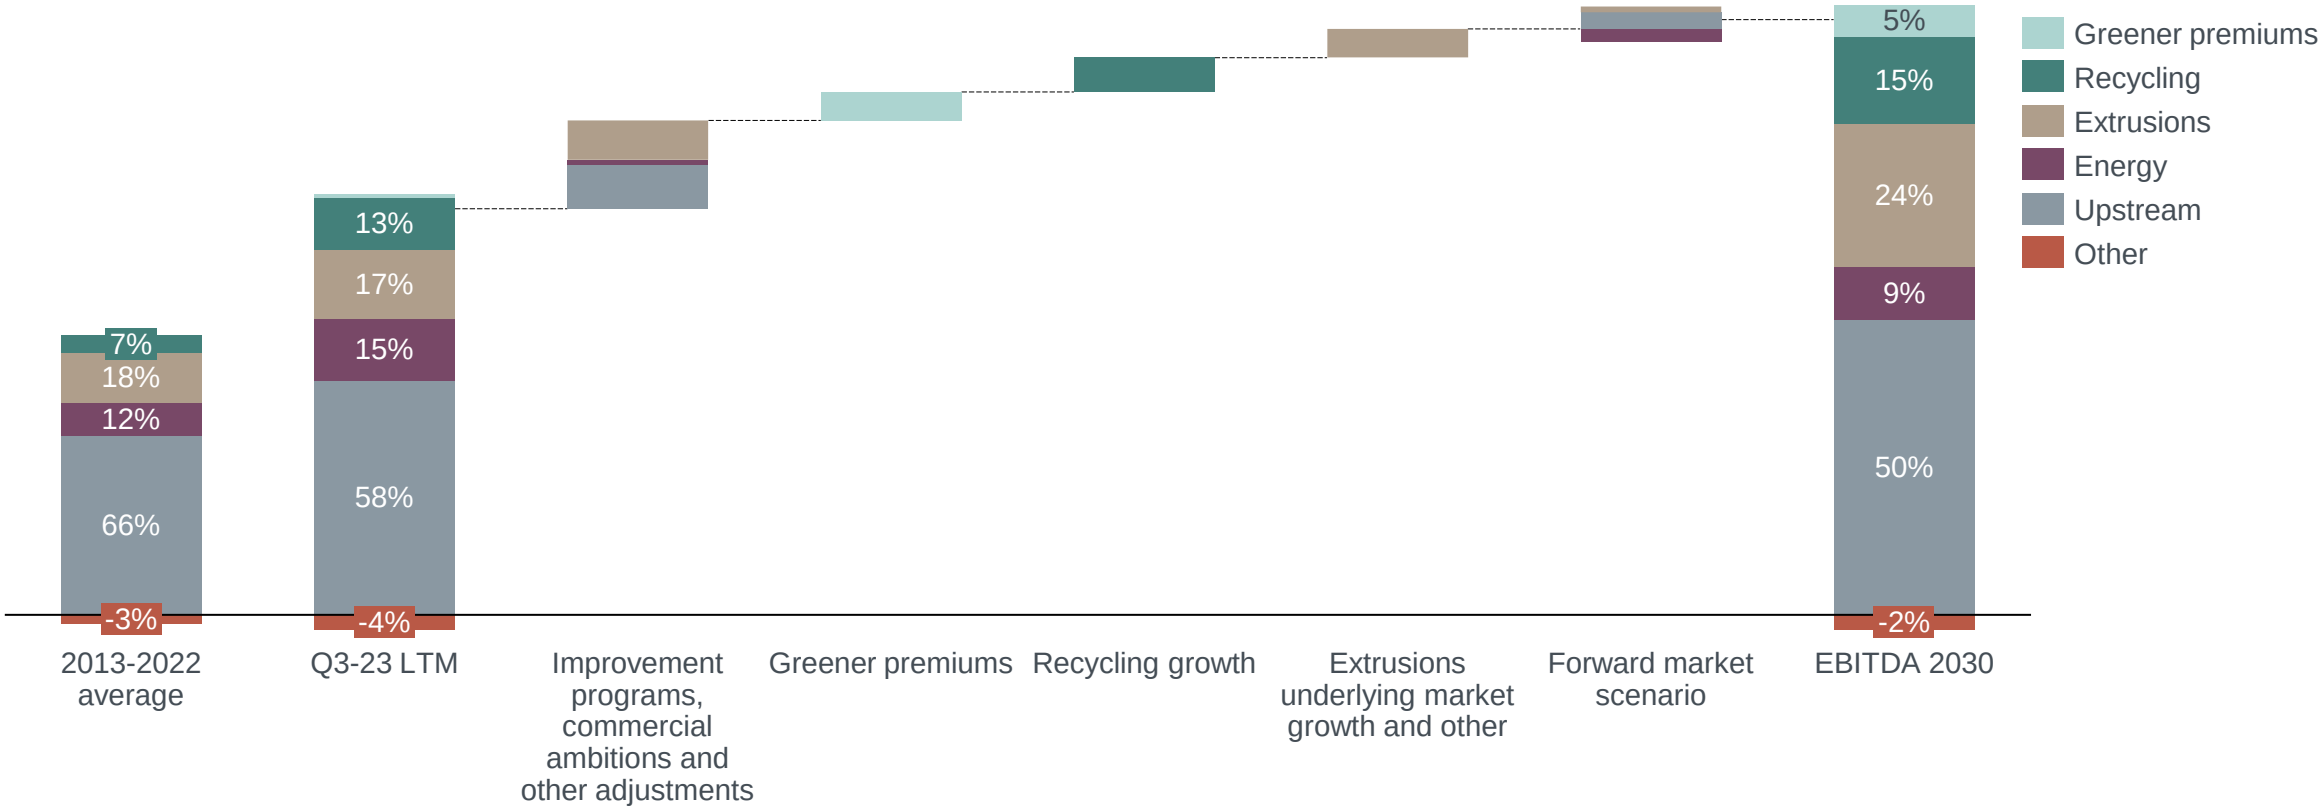
1) 24-26 average guiding

Capital allocation increases earnings resilience

Extrusion and recycling margins, greener premiums growing as share of total earnings

EBITDA

NOK billion



Note: 2013-2022 average and Q3-23 LTM EBITDA as reported

Hydro profitability growth roadmap

Appendix:
Business Areas

The aluminium value chain

World class assets, high-end products and leading market positions

Raw materials processing and energy → **Primary aluminium production, marketing and recycling** → **Aluminium in products**

Bauxite and Alumina

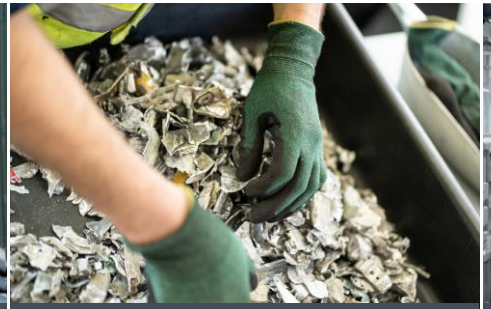
- High quality Gibsite bauxite
- Bauxite capacity 10.8 million tonnes (100% Paragominas and 5% MRN[1)])
- World's largest alumina refinery outside China with capacity of 6.3 million tonnes
- Long-term sourcing contracts for bauxite and alumina

Energy

- Long-term power supply secured in Norway
- Norway's third largest operator of hydropower with 13.0 TWh
- Norway's fifth largest hydropower producer ~9.4 TWh normal renewable energy production
- Ownership in Lyse Kraft DA, the third largest hydro power producer
- New business opportunities within renewable and batteries/storage solutions

Aluminium Metal

- 2.3 million tonnes primary capacity
- Leading in technology for energy efficiency and CO_2-emissions
- Significant initiatives to decarbonize value chain for net-zero aluminium production: carbon capture, new process technology, HalZero, bio-materials in anodes, fuel switch through renewables, bio-methane, hydrogen or plasma technology in casthouses, logistics decarbonization
- High LME and USD sensitivity
- Improving cost position



Metal Markets

- ~2,7 million tonnes sales (excl. Alumetal)
- 1,0 million tonnes recycling capacity
- Strong market positions in Europe, Asia and the US
- Leading provider of low-carbon aluminium (Hydro REDUXA and Hydro CIRCAL)
- Expertise in materials with significant R&D capabilities

Extrusions

- 1.1 million tonnes of extrusion shipments
- No. 1 position in extrusion market in North America and Europe
- Leading European player in building systems business with multi-brand portfolio
- Leading global player in precision tubing segment
- 1.4 million tonnes of recycling capacity

100% of volumes for assets that are fully consolidated and pro rata volumes for other assets.
1) Until December 1st , 2023 (Glencore transaction)

Bauxite & Alumina

B&A is an important enabler for low-carbon aluminium

Controlling the top of the value chain

Bauxite

Alumina

Energy

Primary aluminium

Extrusion

We can produce among the lowest carbon aluminium in the world

4-6 times

lower than the world global primary average

Guaranteeing an integrated supply chain that follows world class ESG practices

Enabling greener premiums for our primary aluminium and extrusion products

Hydro has the highest quality, lowest carbon and most sustainable Alumina in the world allowing us to demand a greener premium from our top customers

By 2025 B&A will deliver:

+ 1st Decile Energy usage
+ 1st Decile Emissions
+ Best Practice Tailings Management
+ Best Practice Residue Management
+ Best Practice Reforestation
+ Best Practice Social Investment
+ Best Practice Community Engagement

= **Global EPD + greener premium**

Industry frontrunner with robust operations

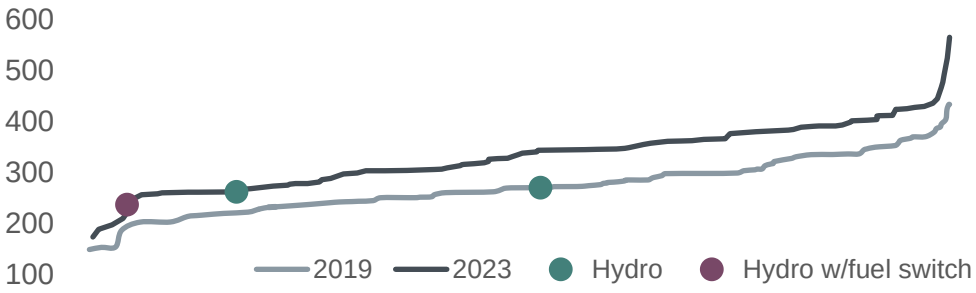
B&A have developed a more robust operation, but current market environment is challenging

Improved operations

- Nameplate production at Alunorte/ Paragominas for the last 3 years
- Greatly improved asset integrity leading to the first award of ISO55001 to a refinery and to a bauxite mine
- Complete rebuild of the water management systems to reflect the changing climate/rainfall levels
- Successful deployment of the press filters
- Development and deployment of tailings dry backfill
- Strengthened key relationships both in the government and local communities
- Rebalancing alumina portfolio (Glencore deal) to reflect internal Alumina needs, returning cash to Hydro
- All while delivering some of the highest quality alumina in the world

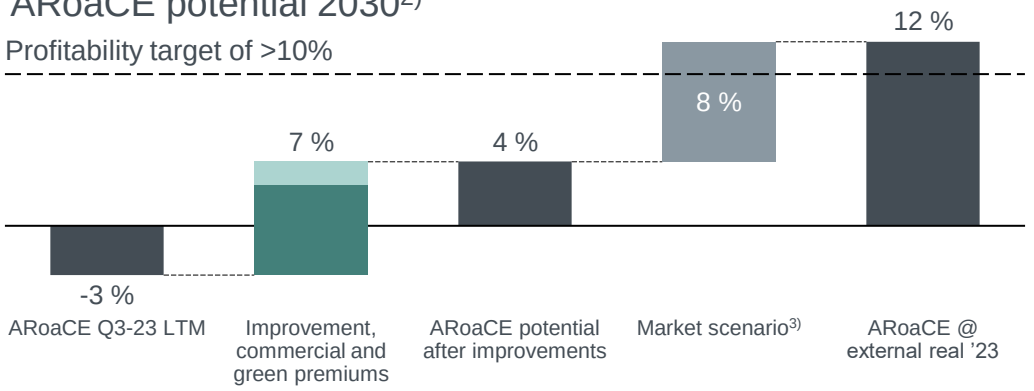
Competitive cost position

CRU (2023), USD per tonne Alumina[1)]



Roadmap to profitability in market scenario

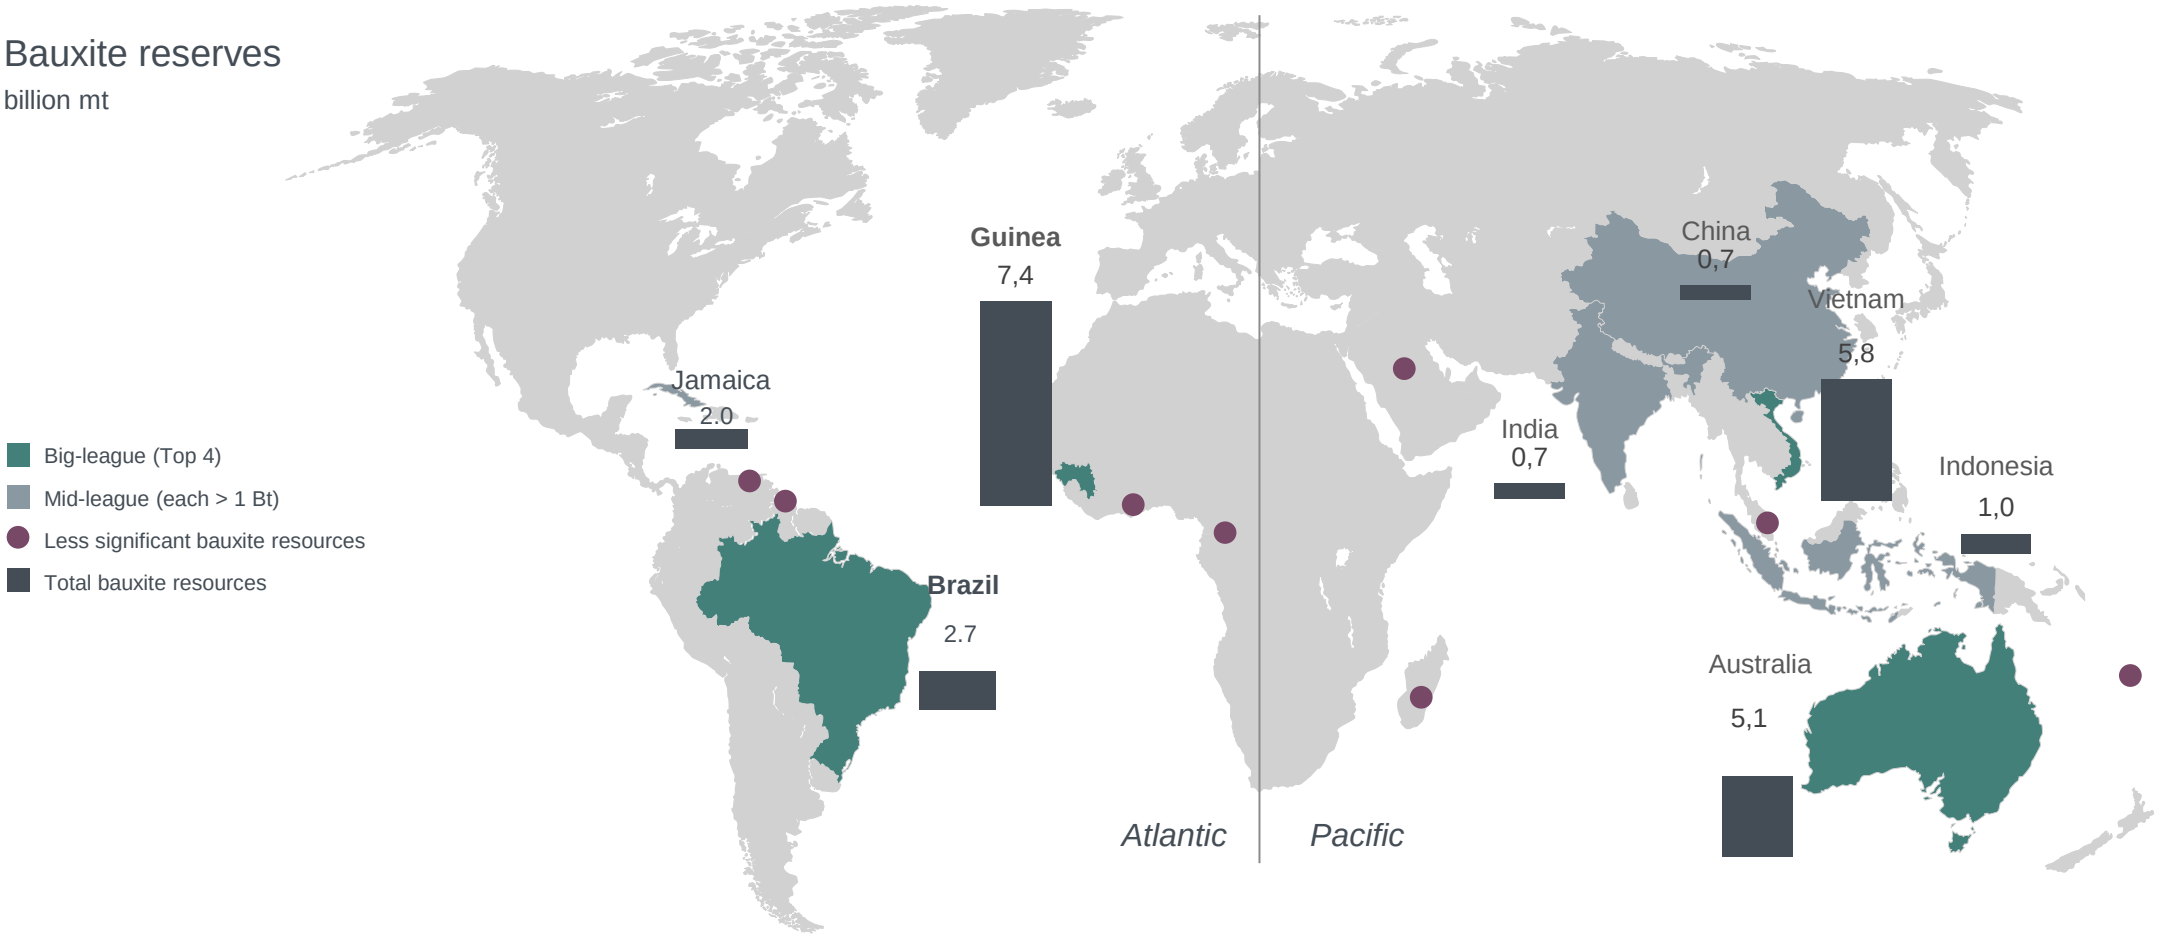
ARoaCE potential 2030[2)]



1) CRU 2023 cost curve. 2) Cash flow calculated as EBITDA + tax + long-term sustaining CAPEX. Assumptions and sources behind the scenarios can be found in Additional information. 3) Sources: External scenario is based on CRU price and premium assumptions and S&P Global FX assumptions, with adjustments as specified in the footnotes

Large and concentrated bauxite reserves

Guinea stands out as a long-term source

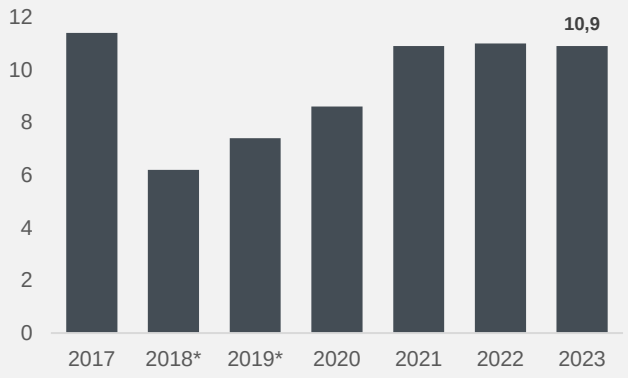


Source: USGS

Bauxite and alumina cluster in Para, Brazil

Paragominas bauxite mine

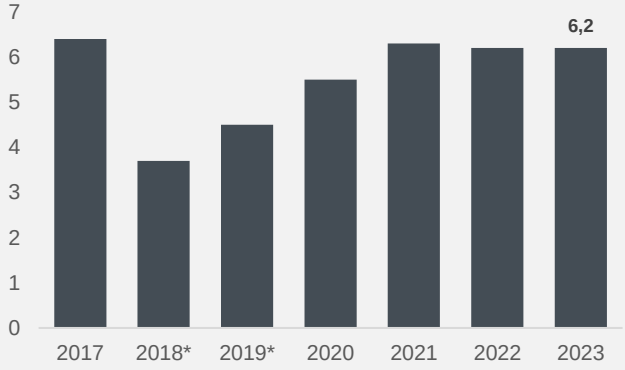
Bauxite production, mt
(100% ownership, nameplate capacity 9.9mt)



- Long-life resource
- Bauxite transported by pipeline
- Pioneering “tailing dry backfill” method for waste management

Alunorte alumina refinery

Alumina production, mt
(62% ownership, nameplate capacity 6.3mt)



- World’s largest alumina refinery outside China
- Bauxite supplied from Paragominas and MRN
- World-class conversion cost position
- State-of-the-art press filter tech to process bauxite residue
- Enhancing plant robustness to prepare for extreme weather events

Bauxite licenses	Refining and mining competencies	External supply contracts	Sales contract portfolio

* Alunorte and Paragominas produced at 50% capacity from March 2018 to May 2019 due to a 50% production embargo on the Alunorte refinery. The production embargo was lifted in May 2019.

Hydro and Glencore partnering up to further develop Alunorte

Hydro balances its alumina portfolio after agreement with Glencore[1)]

- Hydro has sold 30% of Alunorte and 5% ownership in MRN to Glencore
- Glencore acquired an additional 40% of MRN, currently owned by Vale. This stake will be acquired by Hydro from Vale and immediately sold to Glencore on a back-to-back basis.
- The transaction has an *enterprise value of USD 1.15 billion* (including ARO).
- Net debt at Alunorte as of 31 March 2023 was USD 375 million

The sale is an important step to deliver on Hydro's 2025 strategy

- Proceeds used for strategic growth investments in line with Hydro's 2025 strategy and shareholder distribution
- Alunorte is a core strategic asset, however equity alumina production will be more balanced
- Continue to reduce emissions from Alunorte through fuel switch project and electrification of coal boilers, targeting first decile position on global carbon curve by 2025
- Strong commitment to continue development of social projects to improve the lives and livelihoods in nearby communities

1) Valid from December 1st , 2023

Alunorte

- Location: **Barcarena, state of Pará, Brazil**
- Annual capacity: **6.3 mt/year**
- Employees: **7 900[1)]**
- Pre transaction ownership: **92%**
- Post transaction ownership: **62%**

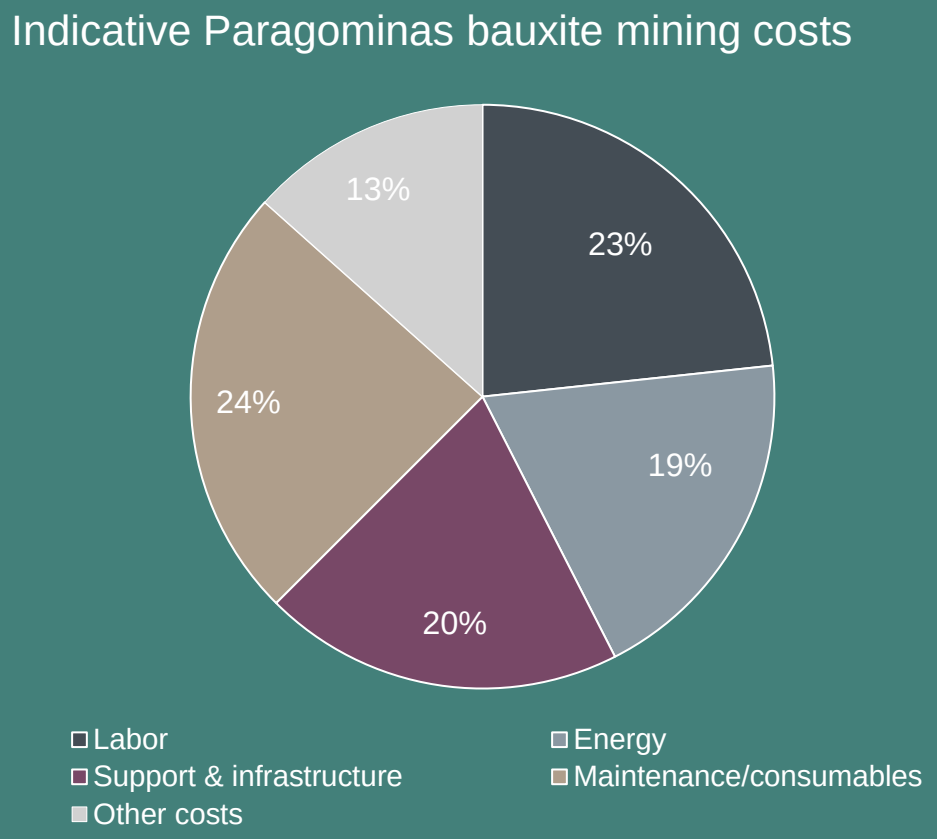
MRN

- Location: **Oriximiná-PA, Brazil**
- Annual capacity: **12.5mt /year**
- Employees: **5 200[2)]**
- Pre transaction ownership: **5%**
- Post transaction ownership: **0%**

2) Includes contractors

Bauxite operational mining costs in Paragominas

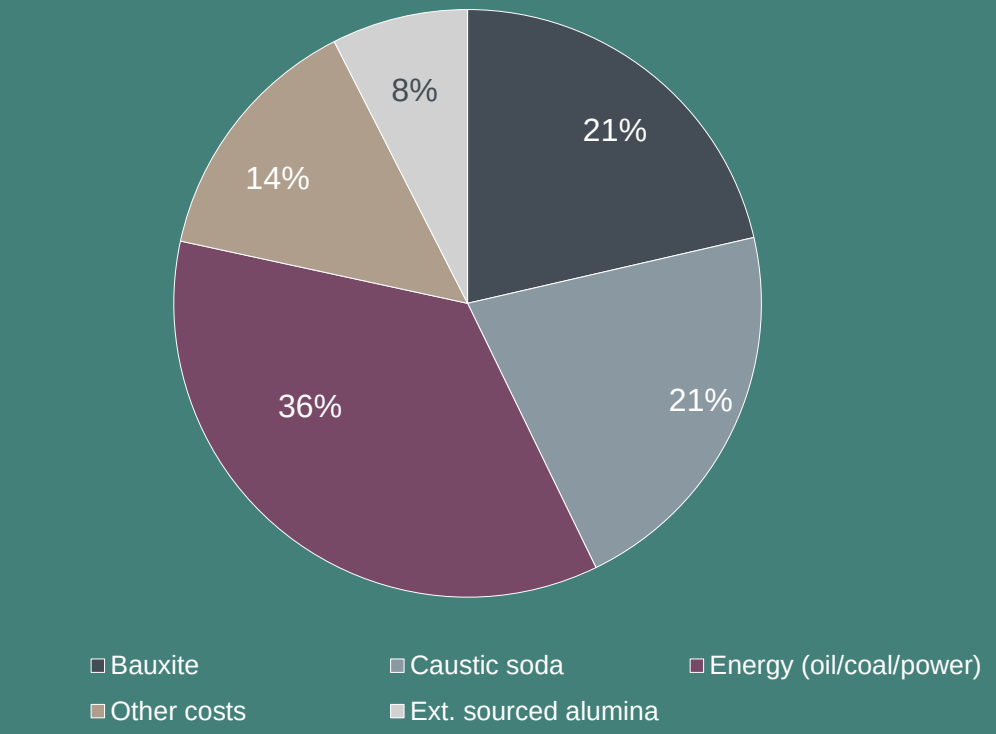
- Labor cost
  - Influenced by Brazilian wage level
- Energy cost
  - Refers to power and fuel cost
- Maintenance and consumables
  - Mainly influenced by Brazilian inflation
- *Large fixed cost base (labor and maintenance) participation*



Favorable integrated alumina cost position

- Implied alumina cost 2023 - USD 340 per mt[1)]
  - Alunorte, Paragominas and external alumina sourcing for resale
- Bauxite
  - Internal bauxite from Paragominas at cost, sourced bauxite from MRN
- Energy
  - Energy mix of heavy fuel oil, coal and electric power
- Caustic soda
  - Competitive caustic soda consumption due to bauxite quality
  - Competitive caustic soda sourcing contracts
- Other costs
  - Maintenance, labor and services

Indicative implied alumina cost composition



1) Realized alumina price minus Adjusted EBITDA for B&A, per mt alumina sales

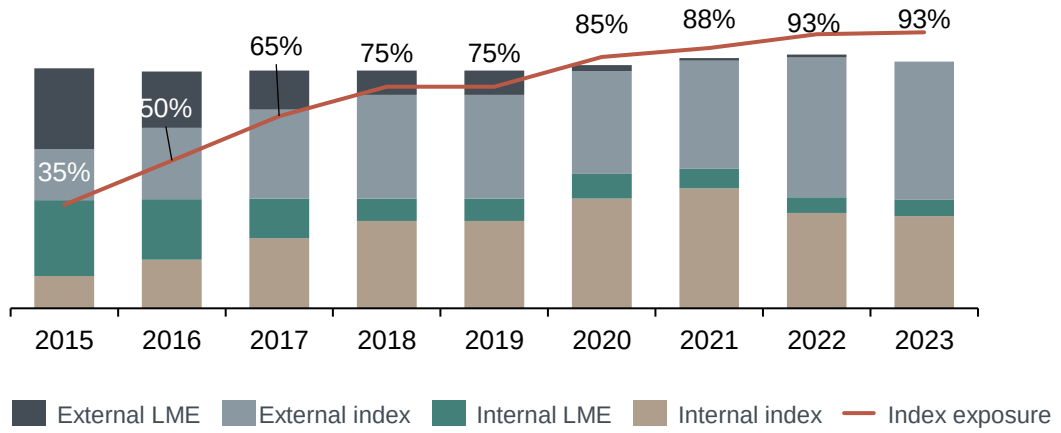
Strong commercial organization maximizing the value of B&A assets

External alumina sourcing

- 4.0-4.5 [2)] million mt of external alumina sourced annually
- Long term off-take agreement with Rio Tinto
  - ~900 000 mt annually from Yarwun refinery
- Short and medium-term contracts
  - To balance and optimize position geographically
  - Various pricing mechanisms
    - Older contracts linked to LME
    - New medium to long term contracts mostly index
    - Fixed USD per mt for spot contracts on index

Long positions in alumina

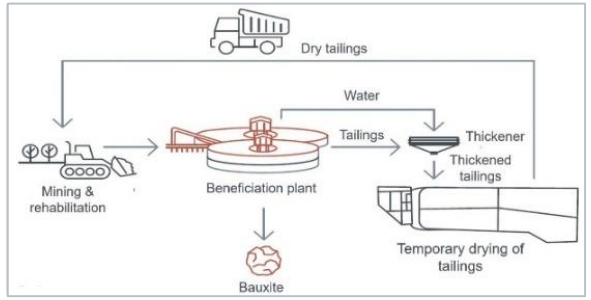
- Pricing should reflect alumina market fundamentals
- Selling 3-4 million mt per year of alumina externally
  - Index pricing[1)] (the new norm) and short to medium-term contracts
  - New contracts: 100% sold on index, except hydrate and short-term contracts, normal terms 1-3 years
  - Legacy LME-linked contracts: priced at ~14% of LME 3M



1) Rounded figures. Indicating volumes available for index pricing. Includes minority sales priced at % of LME with floor. Based on annual sourced volumes of around 2.5 mill t, assuming normal production at Alunorte.

2) Including volumes repurchased from Glencore under the term of the sale of 30% equity in Alunorte

Focus on driving profitability in a sustainable way

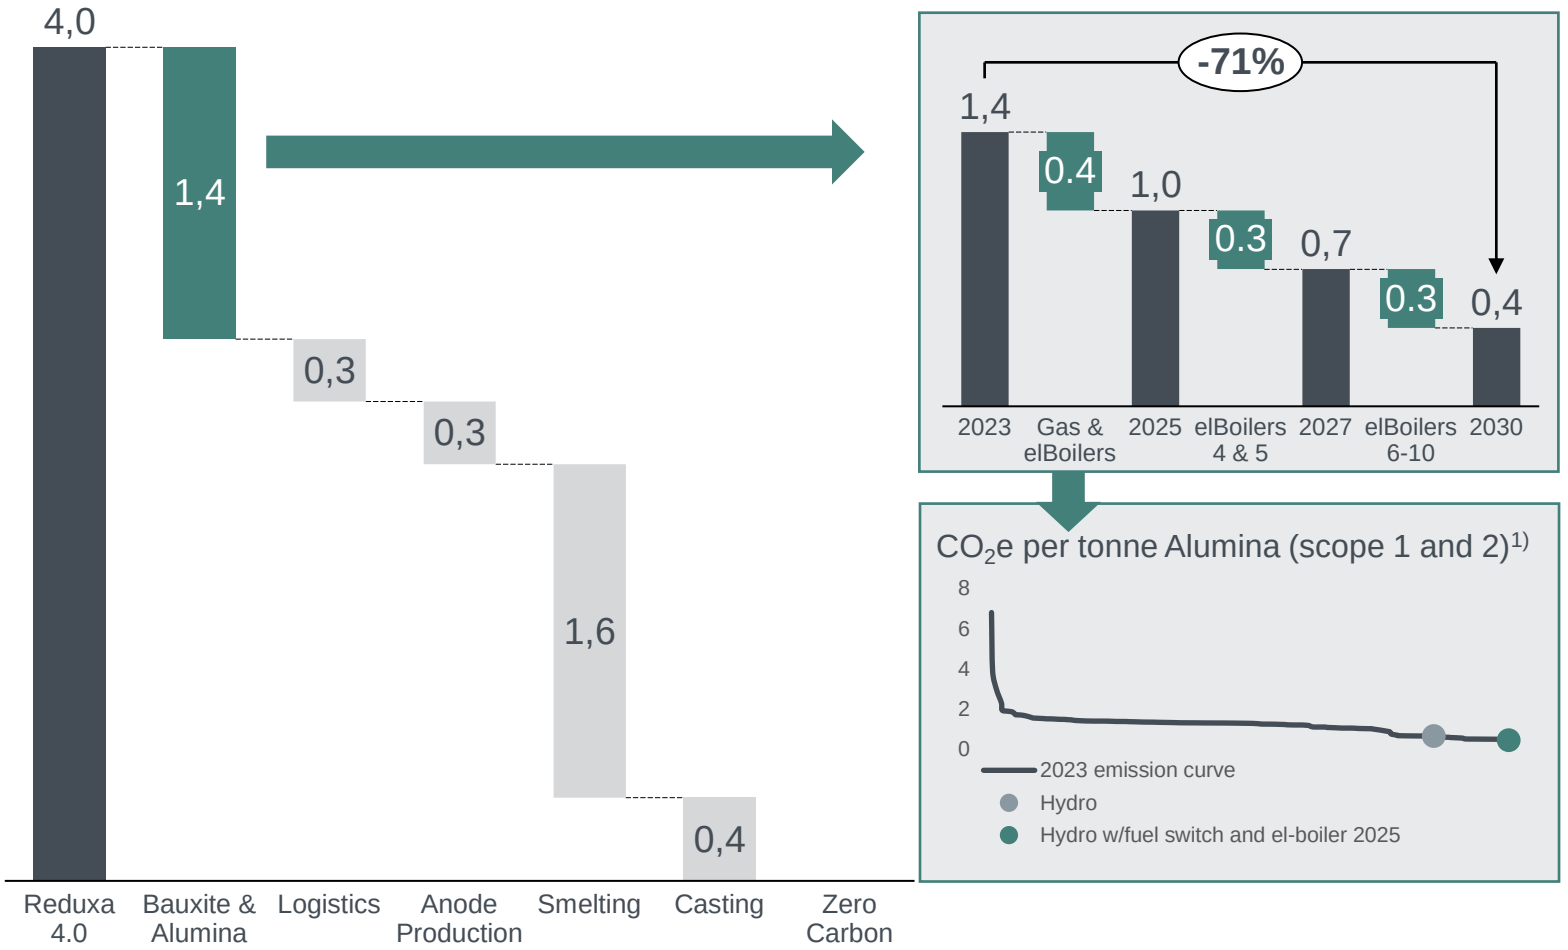
CAPEX: 5.7 BNOK				Improvement program	
Tailings dry backfill		Fuel switch		El-boilers	
					


60% IRR	↓1,000HA land usage	**26%** IRR	- 700 000 tons CO_2	**>50%** IRR	- 400 000 tons CO_2	Improvements **NOK 3.2 Billion**	Commercial **NOK 620 million**
• Tailings dry backfill **removes the need for tailings dams** • **New standard in Brazil** and no new tailings storage areas will be licensed • Moving away from tailings storage dams **increases safety and saves billions of NOK in CAPEX**		• FSRU arriving at Alunorte by year end • Upon full conversion, **700,000 tonnes reduced in CO_2 emissions per year and ~USD 25 per tonne improved cash cost** (USD 160-190 million annually[1]) • Moving from Brent index (Oil) to Henry Hub (Gas) reduces the price volatility		• With the success of 1st electrical boiler (IRR>200%), **two more electrical boilers** are currently being installed • Powered by **20-year renewable PPA's with Hydro Rein projects,** provide a stable power price for the next 20 years at an average of USD 6 per MWh cheaper than gas		• The Improvement Program brings significant gains through high-energy engagement from the whole organization • The Commercial program highlights the trading book efficiency for alumina and hydrate sales	

1) USD 160 million on forward prices 2025 (first year of full effect), USD 190 million on spot as of Q3 2023

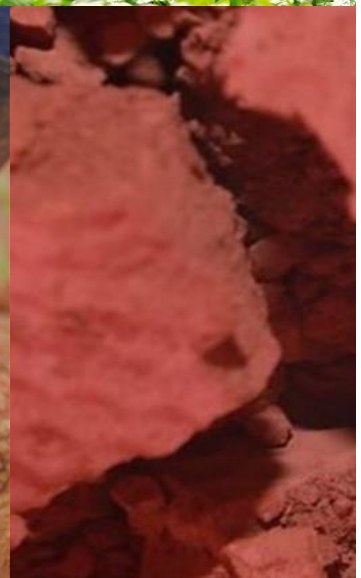
Alunorte to reduce carbon 70% by 2030

CO_2e emissions $kgCO_2/kgAl$



1) CRU 2023 emission curve

- Already 1st Quartile emissions in 2023
- Fuel Switch and three el-boilers will move Alunorte to one of the lowest smelter grade Alumina available (project being executed)
- Further two el-boilers will remove the need to use coal by 2027
- An additional five el-boilers will give us the ability to produce steam without emissions



Contributing to nature positive

Hydro

Reforestation

- **Best practice reforestation program** in Paragominas, exceeding 1-to-1 replanting on a strict a three-year cycle:
  - Year 1 = Deforestation
  - Year 2 = Mining
  - Year 3 = Reforestation
- Working together with multiple universities and researches
- Expanding the program and **start rehabilitation outside of our mine,** contributing towards Nature Positive

Residue management

- Hydro is **current best practice in Residue management** averaging 0.7T of Residue per T of alumina
- **Entered into an agreement with Wave Aluminium** – creating the potential to extract up to 1 million tonnes of carbon free pig iron from residue each year
- The first phase of the treatment plant will go live in 2024 and will be **capable of processing 50,000T of Residue**

Investing in the community is our license to operate

Social Infrastructure

- Construction of **9 Terpaz community centers** (3 already built) targets security, income generation and access to basic services to 1,500 people per day
- Construction of a Technical School with the **capacity to educate 1,200 students per year**

Community Projects

- Investment in community-based projects **benefitted 80 thousand people since 2018**
- **60 thousand people** with access to education
- **1,400 family farmers** with access to technical support

Stakeholder Engagement

- **Transparency, dialogue and volunteer work** are performed by a dedicated team
- 178 community leaders are involved in a dialogue forum called Sustainable Barcarena Initiative
- **500 volunteers** worked to benefit 14 thousand people and 70 local organizations

Bauxite & Alumina sensitivities

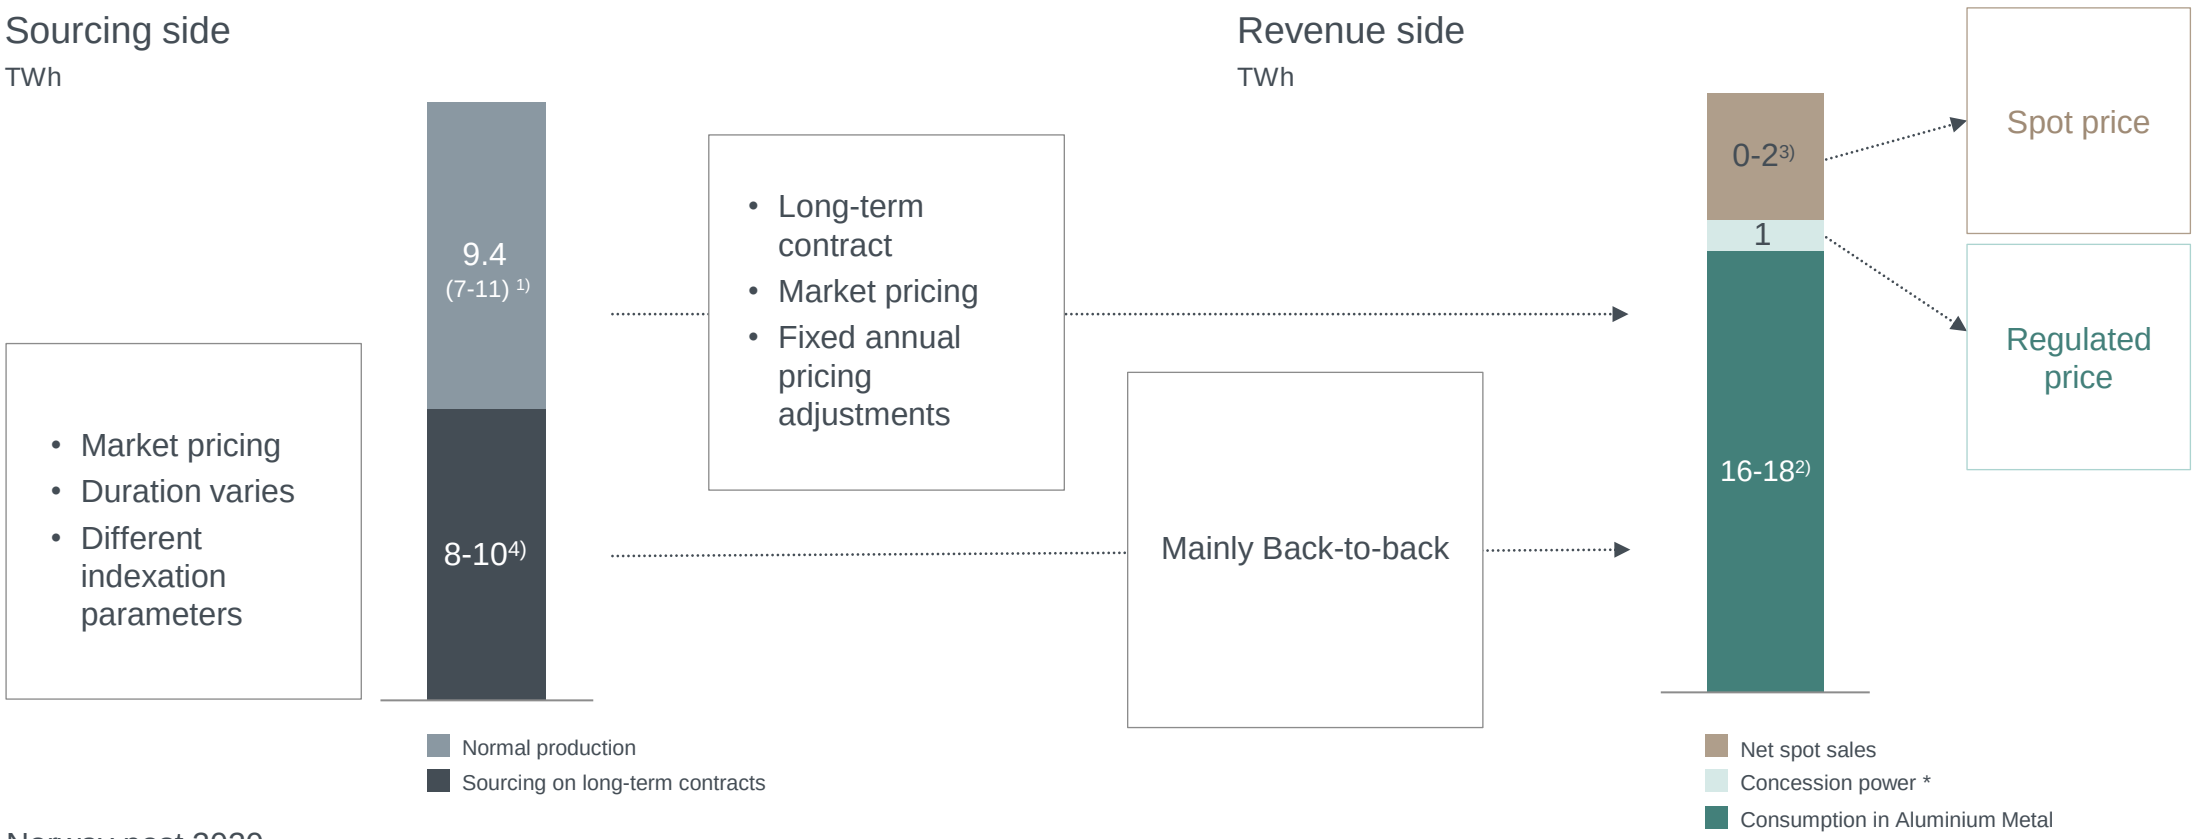
1) Share of Business Operating Cash Cost over the cycle

Market pricing principle applied to internal contracts

Based on external price references

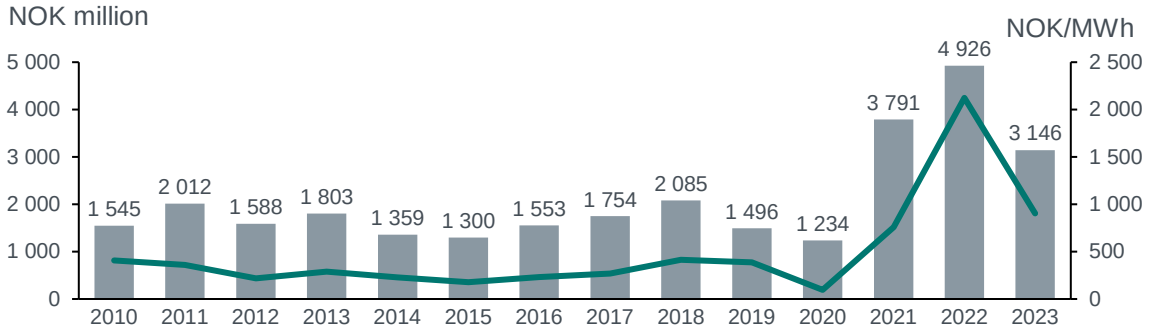


Norway post 2020

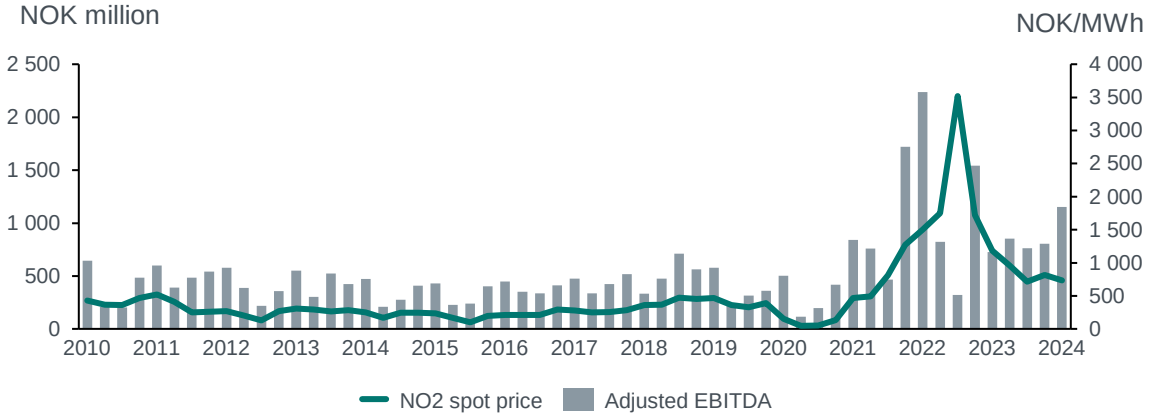
1) Depending on the precipitation level, hydropower production may vary from 7 TWh in a dry year to 11 TWh in a wet year
2) Consumption in AM at current production levels and at full installed capacity
3) Net spot sales vary depending on the power production level and internal consumption in AM
4) Depending on status of sourcing

Energy EBITDA development

Adjusted EBITDA and NO2 spot price



Adjusted EBITDA and NO2 spot price



- Production and market prices strongly linked to hydrological conditions
- Seasonal market variations in demand and supply. Gains or losses may occur from delink between area prices arising due to transmission capacity limitations in the Nordic area
- Power portfolio optimized versus market
- Lift in annual EBITDA contribution from 2021
  - Positive impact from expiry of legacy supply contract from 2021
  - 8 TWh internal contract for power sales to Aluminium Metal in Norway effective from 2021-30
- Stable and competitive production cost base:
  - Mainly fixed costs
  - Volume-related transmission costs
- Maturing portfolio growth options; emphasis on flexible production & selected geographies

1) Adjusted EBIT 2006 based on USGAAP 2) Compared to 2020

Norwegian power market surplus in question

Public opposition to onshore wind parks limiting the effect of attractive renewable resources

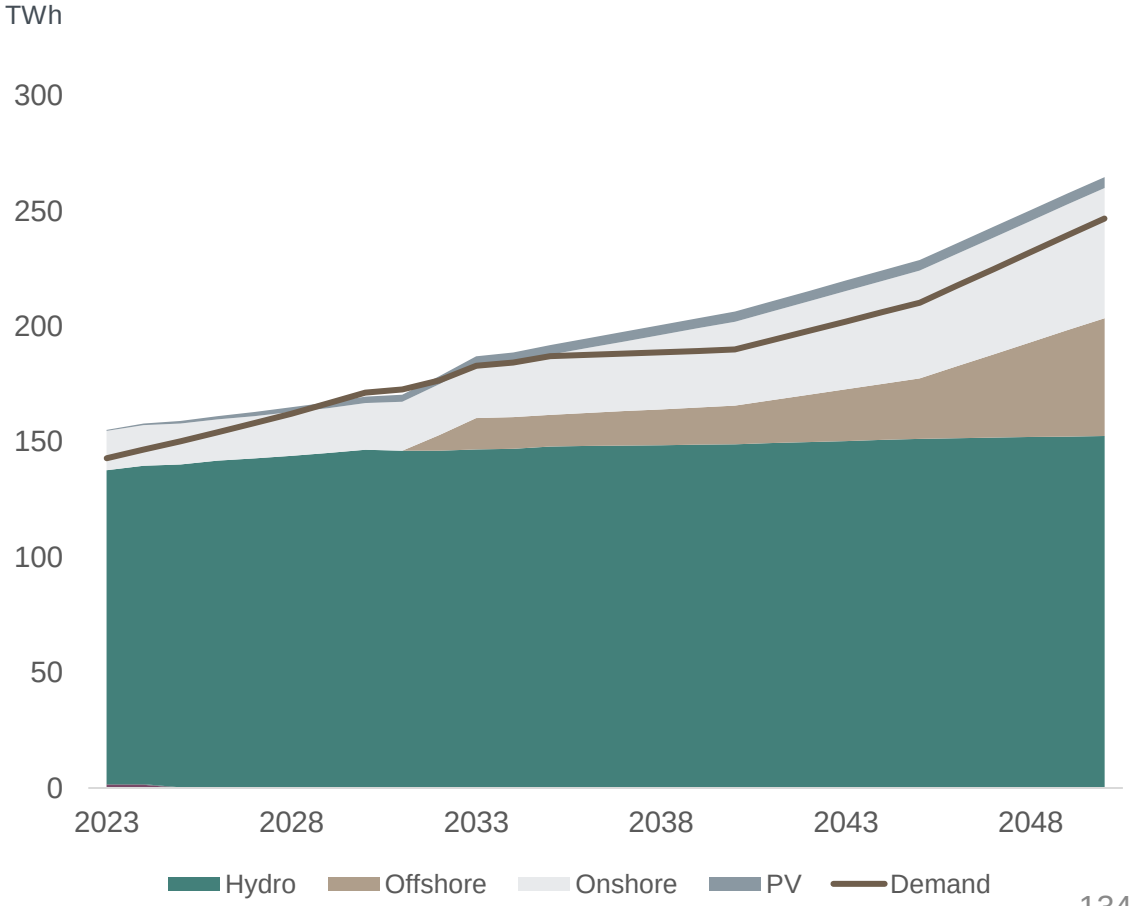
Market uncertainty prevails

Power market balance weakening (short-medium term)

Demand from electrification and new industries outpaces supply in the short end

Lack of certainty regarding timing of new offshore wind areas

Norwegian Power Balance



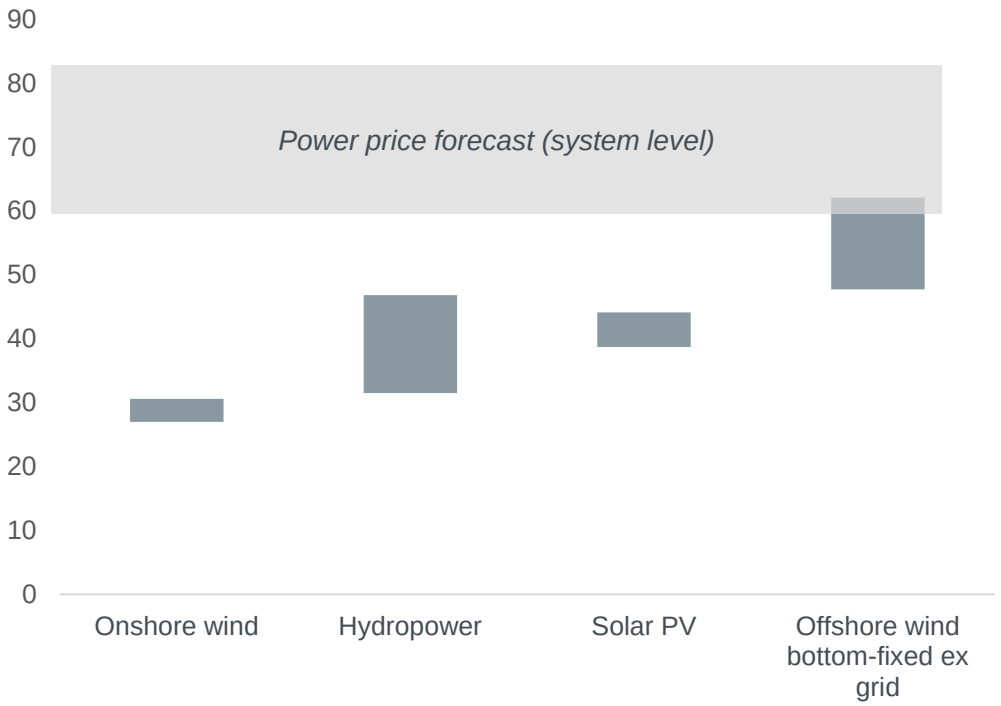
Source: Hydro

Norwegian power projects remain attractive

Attractive resource base and cost level, and onshore wind is enabler for renewables at low shaping cost

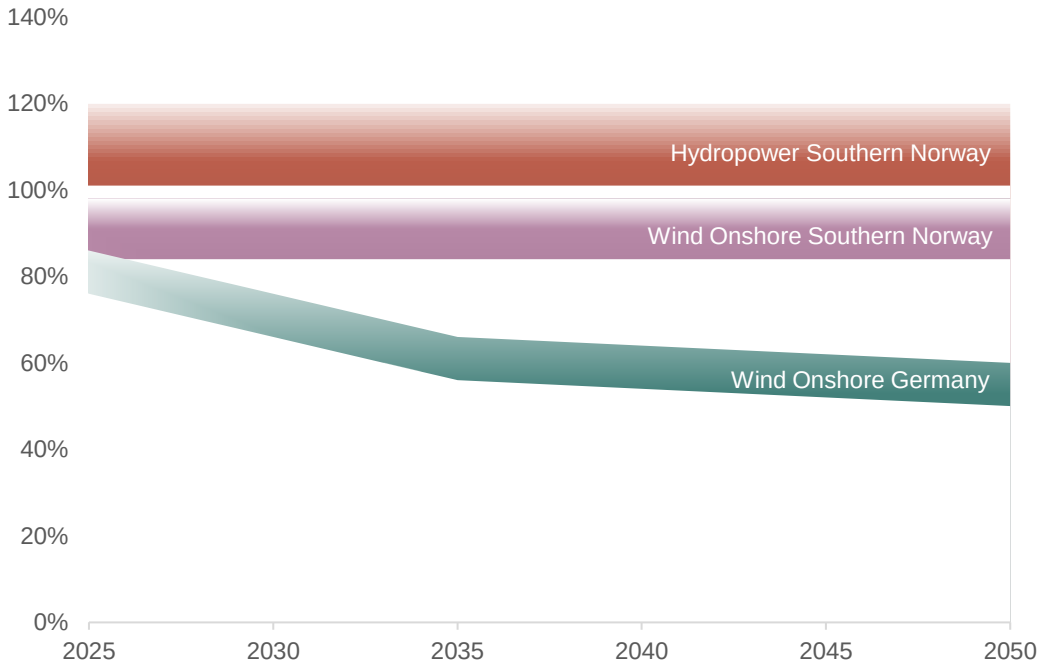
Range of LCOE and Nordic System price to 2030[1)]

2023 EUR per MWh



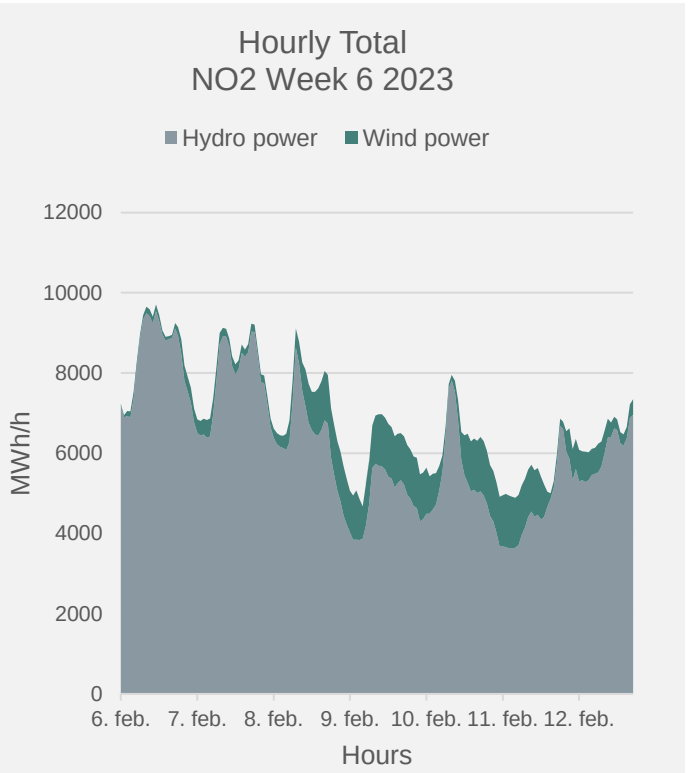
Illustrative Capture rates Southern Norway and Germany

Percentage

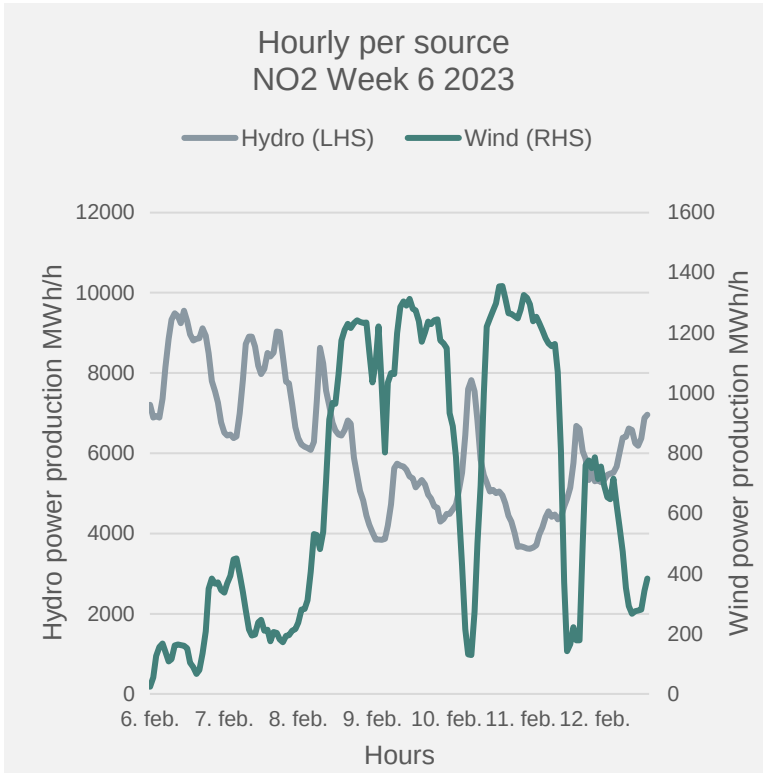


1) LCOE = Income necessary from power as produced to reach profitability for the technology. Estimates from four different consulting companies. Offshore wind not relevant in Norway until post 2030.

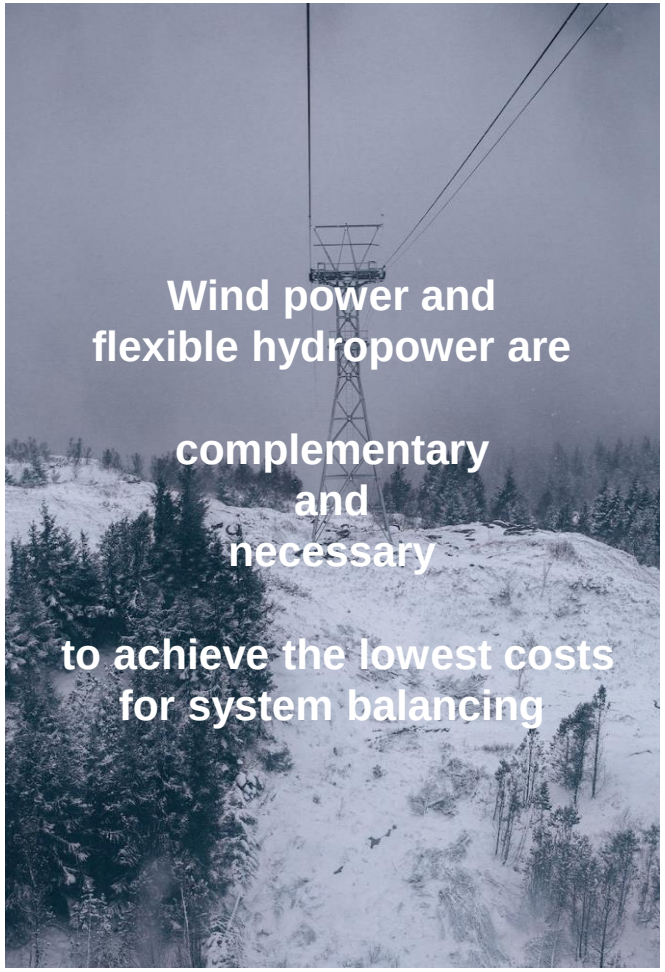
Wind and hydropower interplay is key for future system



Share of wind production in NO2 is currently 10-12 %*



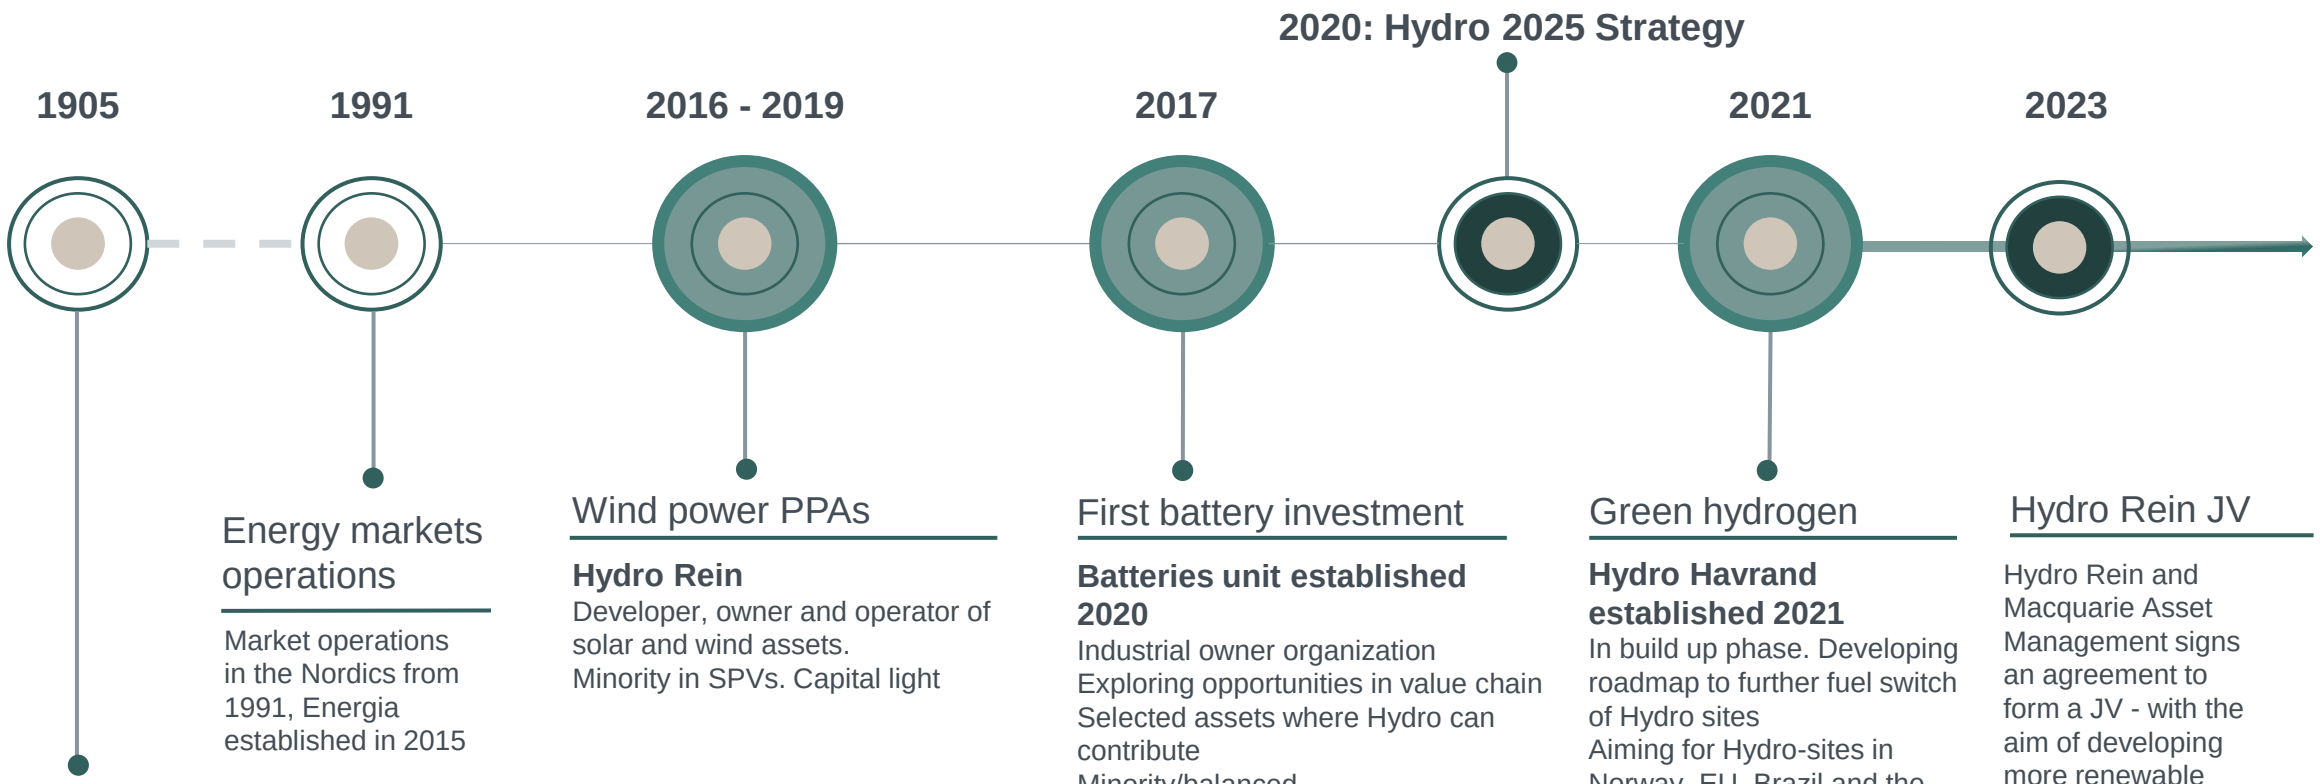
Flexible hydropower production adjusts according to intermittent wind production



*For year 2022 and 2023

Pursuing growth opportunities at different stages

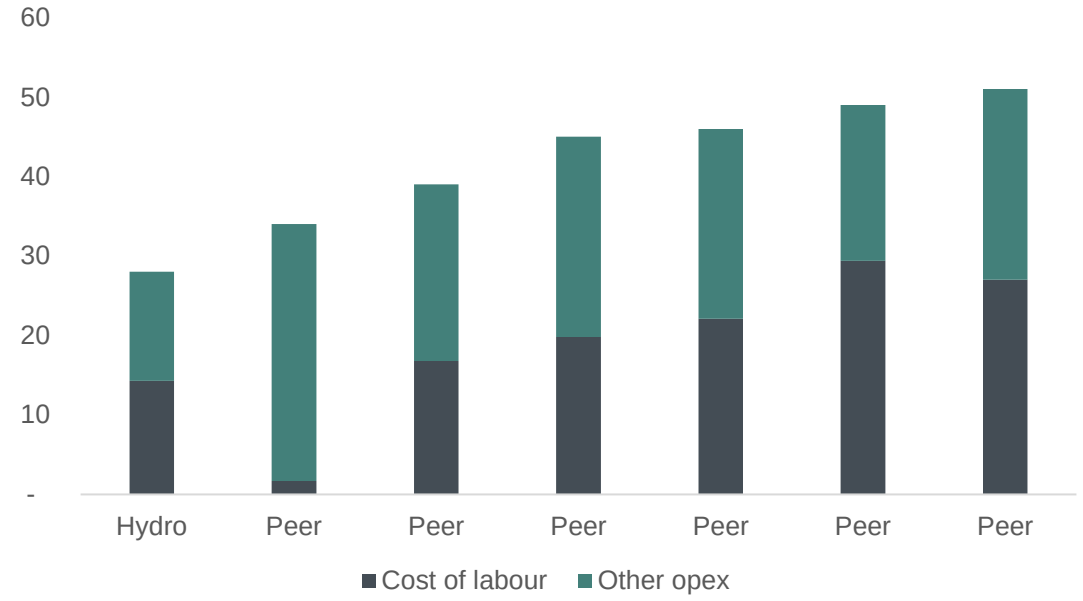
Realizing value potential



Energy: Strong production platform, market performance and growth opportunities

Resource spend Norwegian hydropower players 2022

NOK per MWh



Industry leader on cost and operational performance

Strong platform for value creation

- EBITDA “platform” from operations
  - **8 TWh** on long term contracts (predictable prices) **+ 2 TWh** (average) net long spot volume in merchant market
  - App. **NOK 3.5 billion** LTM adjusted with normal production and no area price gain[1)]
- Commercial contribution of app. **NOK 400 million** (average last years) comes in addition
- Maturing portfolio growth options; emphasis on flexible production and selected geographies

1) Based on a normal production of 9.4 TWh with a 2021 seasonal profile at last 12 months prices of NOK 1.1 / kWh (NO2)

Energy assets and unique competence drive value creation across Hydro

Strong platform for production, sourcing and advisory

Operations and projects: HSE excellence, operating 40 power plants across Norway (hydropower and wind). Large scale project execution across new units and Hydro

Commercialize positions: PPA originator, from “as produced” to PPA profile, highly competitive sourcing and optimal energy solutions

Market, grid & regulatory insight: Strong market presence and insight, monitoring regulatory initiatives across Norway, the EU and Brazil. Grid and infrastructure development

Decarbonizing Hydro and external industries

Decarbonizing Hydro

- Power sourcing, managing and matching profiles and consumptions
- Hydro Rein offering renewable power and energy solutions
- Hydro Havrand replacing fossil fuels with green hydrogen
- Hydrovolt delivering post consumer aluminium scrap from used EV batteries

Decarbonizing industries

- Investing in renewables in the Nordics, Europe and Brazil and PPAs to external customers
- Battery materials investments focused on reduced CO_2-footprint from LCA[1)] perspective
- Green hydrogen to fuel switch industries and transport

1) LCA = Life Cycle Assessment

Position and capabilities across entire value chain

Major renewable energy producer, market player and offtaker

In Operation

Hydropower in Norway (equity): 9.4 TWh

Hydropower in Norway (operator): 13 TWh

Wind power in Norway (operator): 0.7 TWh

Sourcing

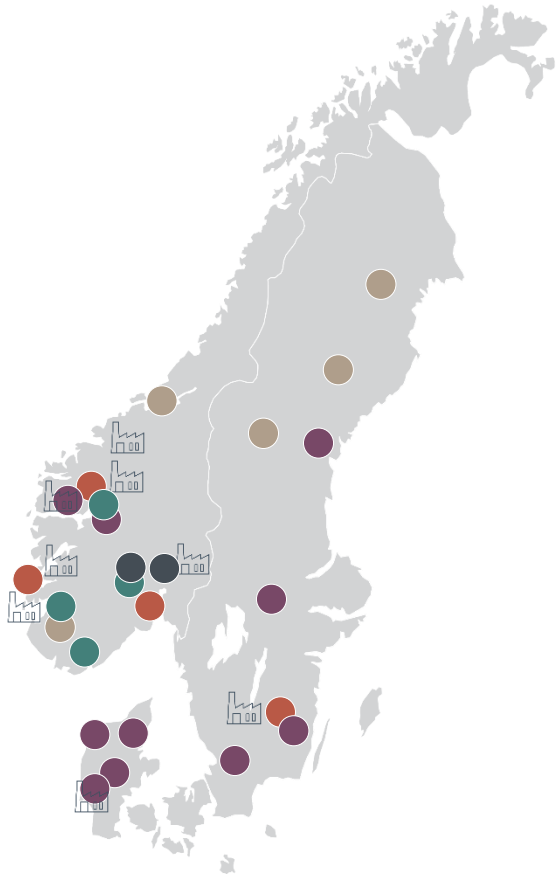
Hydropower in the Nordics: 6 TWh

Wind power in the Nordics: 4.2 TWh*

Hydro Rein projects under development

Wind power in the Nordics: 4.4 TWh

Solar power in the Nordics: 1.1 TWh



Offtake Aluminium Metal

Norwegian smelters: 17 TWh

Offtake Extrusions

Selected Extrusion plants: 0.1 TWh

Potential offtake Batteries

Potential sites portfolio companies: 1 TWh

Potential offtake green Hydrogen

Hydrogen hubs at selected strategic sites

Equity power *Sourcing* *Hydro Rein projects* *Hydrogen hub* *Industrial offtake* *Market operations*

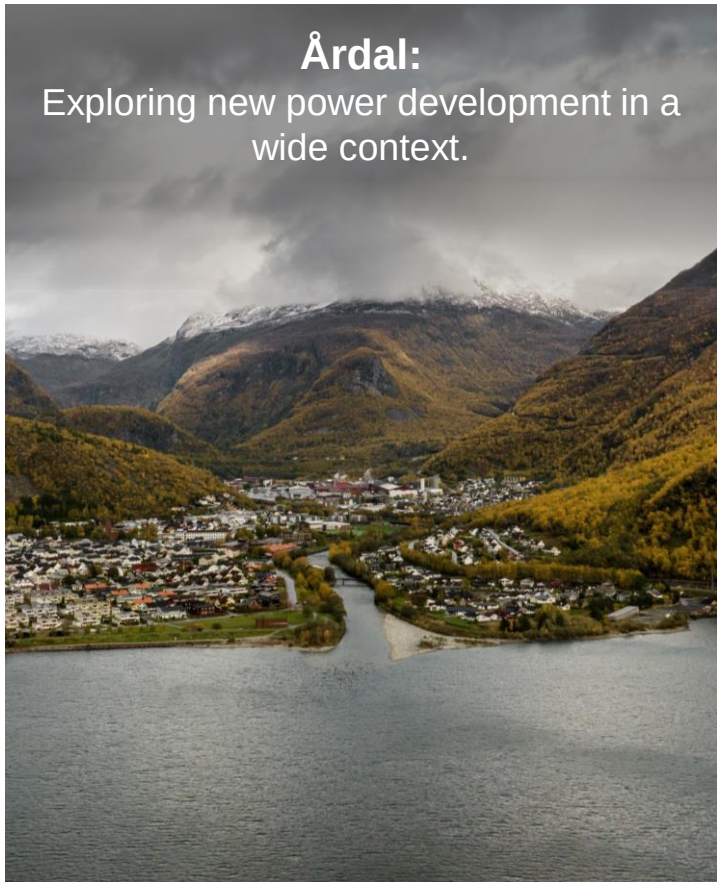
* Sourcing volumes in 2023/2024 affected by disrupted delivery of volume from a long-term power purchase agreement in the northern part of the Nord Pool area.

Status for Hydro's wind projects in Western Norway

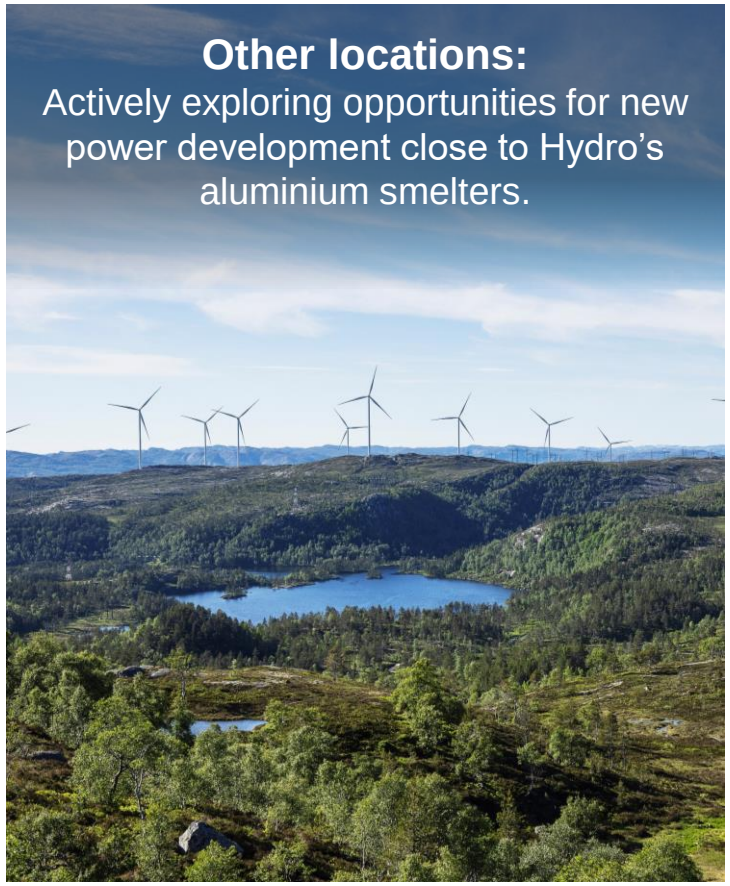
Pursuing opportunities to develop and source power to industry

Snøheia:
Project development ongoing.
Proceeding when project is mature.

Årdal:
Exploring new power development in a wide context.



Other locations:
Actively exploring opportunities for new power development close to Hydro's aluminium smelters.



Value creation across the energy space going forward

1. High performance and profitability ambitions:
   - *Energy Classic ROACE > 15%*
   - *Hydro Rein JV platform annual eIRR 10 – 20 %*
   - *Batteries 3x invested capital, 20% TSR average annually*
2. Grow value of our Norwegian portfolio through upgrading of existing hydropower plants. Increase commercial ambitions in market operations
3. Develop Hydro Rein to become the preferred supplier of renewable energy solutions to industrial customers in core markets - and a key enabler for decarbonization of Hydro
4. Support Hydro across business areas and geographies with fuel switch solutions including green hydrogen
5. Develop our portfolio of assets delivering more sustainable battery materials, empowering the future of green mobility

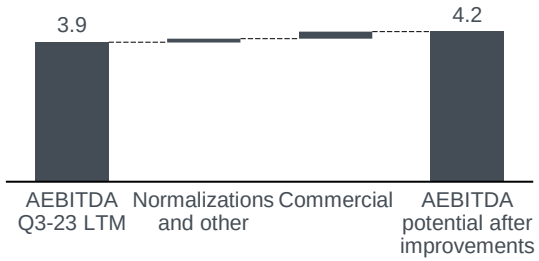
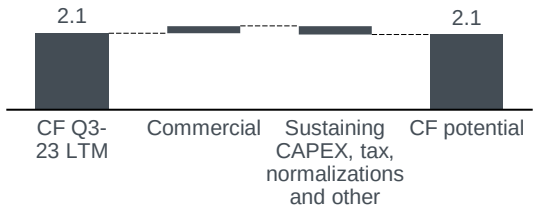
Energy profitability growth roadmap

Main drivers – Net spot sales volume and market development

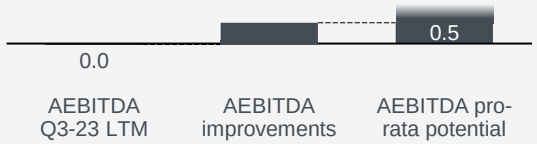
Classic - AEBITDA potential 2030
NOK billion



Classic - Cash flow potential after sustaining CAPEX[1] 2030
NOK billion



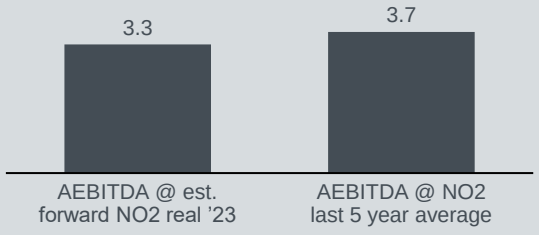
REIN JV – pro-rata AEBITDA potential (Hydro's share)[2] 2030
NOK billion



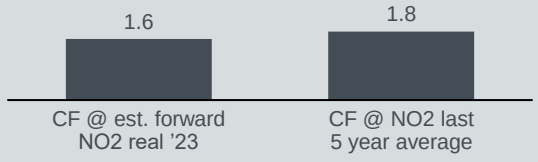
Main further upside drivers

- Additional growth opportunities
- Further commercial and operational improvements
- Positive market and macro developments
- Batteries not included – return target of 3x invested capital

Classic - Market scenarios 2030



Classic - Market scenarios 2030



REIN JV – Accounting treatment

- REIN JV will be booked as an equity accounted investment after transaction
- This means the Hydro share of net income will be included as part of the Energy AEBITDA

Main downside risks

- Negative market and macro developments
- Regulatory and framework conditions, incl. tax
- New project execution

Note: Classic excluding growth from new energy areas
1) Cash flow calculated as EBITDA + tax + long-term sustaining CAPEX
2) EBITDA from assets. S&GA at JV-level not included
Assumptions and sources behind the scenarios can be found in Additional information

Multiple value levers to create attractive returns

Value levers at project and platform level

Key value levers		Comments and selected examples
Project equity IRR		**Base stand alone project equity IRR**
Structuring		Optimize capital structure (including refinancing), extend PPA
Operational excellence		Optimize cost base (capex/opex), improve productivity, extend asset lifetime
Hydro Rein Services		Cross-sale of services such as construction project management, asset and energy management
Farm downs		Crystalize value through partial sell-down
Platform value		Pipeline growth, economies of scale, industrialization & best practice sharing
Platform equity IRR	**10-20%**	**Total IRR potential at platform level**

Hydro Rein with access to several **value creation levers** at **asset level** to boost project returns

Further, material return potential at **Platform Level** that is not captured at individual asset level

Total return potential Rein JV platform level: **10 - 20% IRR**

Empowering the future of green mobility

Hydro

Progress in the sustainable battery materials portfolio throughout 2023

STRATEGIC TARGETS

3x
Value uplift in 2030 on equity invested by 2027

GROWTH ASSETS

hydrovolt

Circular solutions — 50% ownership

- Fully operational and reached nameplate capacity during Q3.
- Commenced building industrial pilot for battery pack dismantling and discharge.

Vianode

Anode materials — 30% ownership

- First plant under construction at Herøya, which will support customer qualification.
- Signed lease agreement for large-scale plant at Frier Vest, Norway.

E-MAGY

Anode materials

- Ramping up pilot production
- Strengthening organization on strategic positions

Lithium de France
GEOTHERMAL

Lithium — 12% ownership

- Secured 2 exploration permits in Alsace region and target to start drilling operations in 2024.

PORTFOLIO HOLDINGS

Corvus
24 % owner share

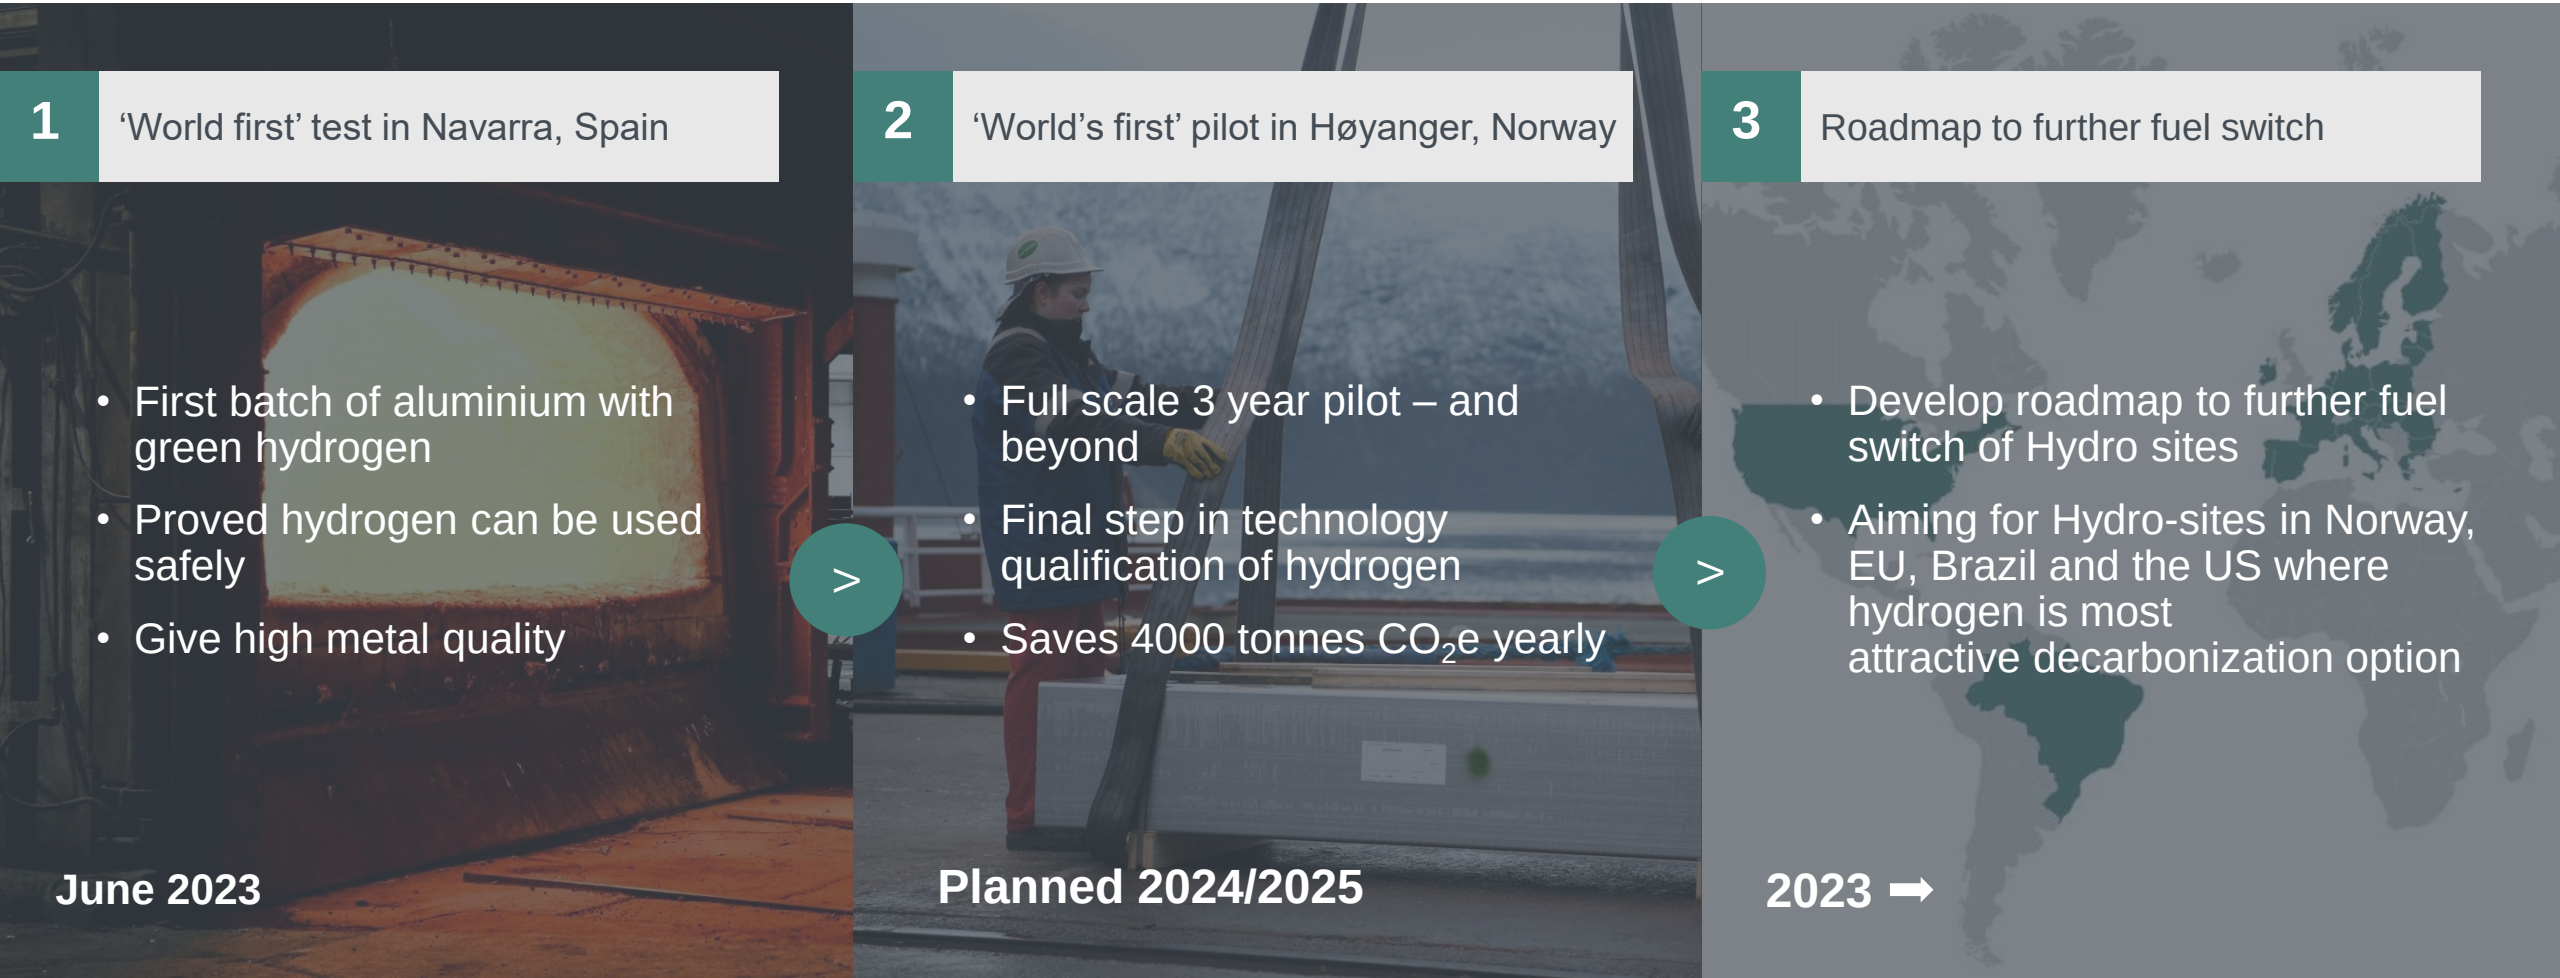
0.6% owner share

Hydrogen breakthrough

Hydro Havrand: World's first aluminium made with green hydrogen

Hydro



1 'World first' test in Navarra, Spain

- First batch of aluminium with green hydrogen
- Proved hydrogen can be used safely
- Give high metal quality

June 2023

2 'World's first' pilot in Høyanger, Norway

- Full scale 3 year pilot – and beyond
- Final step in technology qualification of hydrogen
- Saves 4000 tonnes CO_2e yearly

Planned 2024/2025

3 Roadmap to further fuel switch

- Develop roadmap to further fuel switch of Hydro sites
- Aiming for Hydro-sites in Norway, EU, Brazil and the US where hydrogen is most attractive decarbonization option

2023 ➡

Aluminium Metal

Global production network

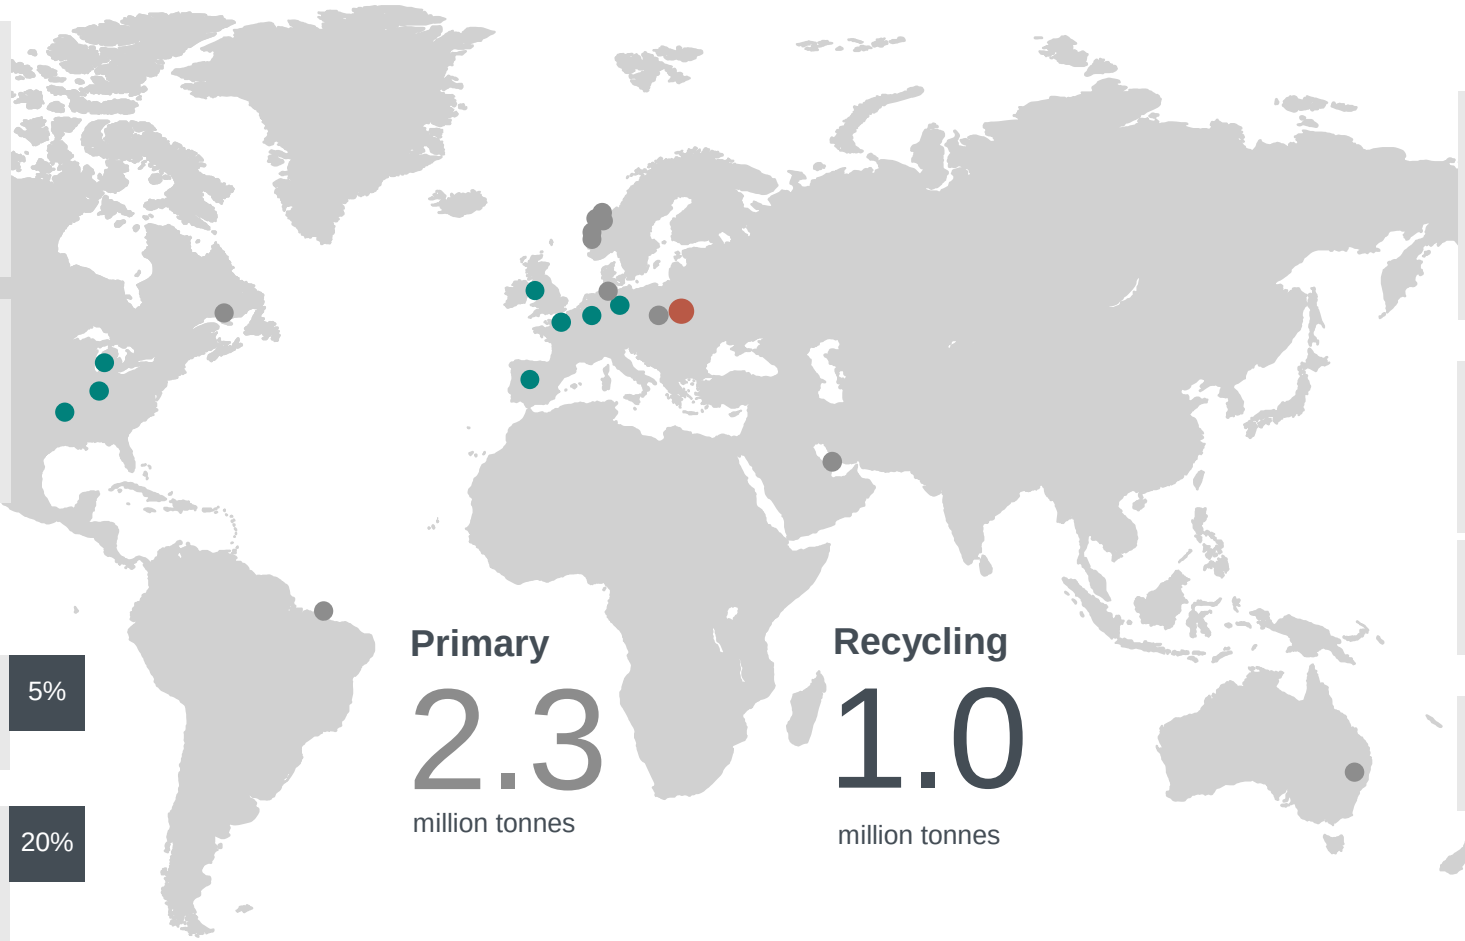
Primary production and recycling

8 stand-alone extrusion ingot recyclers

- 3 in the US
- 5 in Europe (UK, Luxembourg, France, Spain and Germany)
- St Peter & Alusort scrap sorting facilities

Alumetal portfolio – 4 foundry alloy recyclers

- 3 in Poland
- 1 in Hungary
- Nowa Sol scrap sorting hub



Norway, 1 155 000 tonnes — 50%

- Sunndal (100%): 430,000 tonnes
- Årdal (100%): 205,000 tonnes
- Karmøy (100%): 275,000 tonnes
- Høyanger (100%): 65,000 tonnes
- Husnes (100%): 200,000 tonnes

Slovakia, 175 000 tonnes — 8%

- Slovalco (100%): 175,000 tonnes
- Hydro owns 55%
- 100% primary production curtailed

Qatar, 325 000 tonnes — 14%

- Qatalum (50%): 305,000 tonnes

Australia, 75 000 tonnes — 3%

- Tomago (12%): 75,000 tonnes

Canada, 128 000 tonnes — 5%

- Alouette (20%): 128,000 tonnes

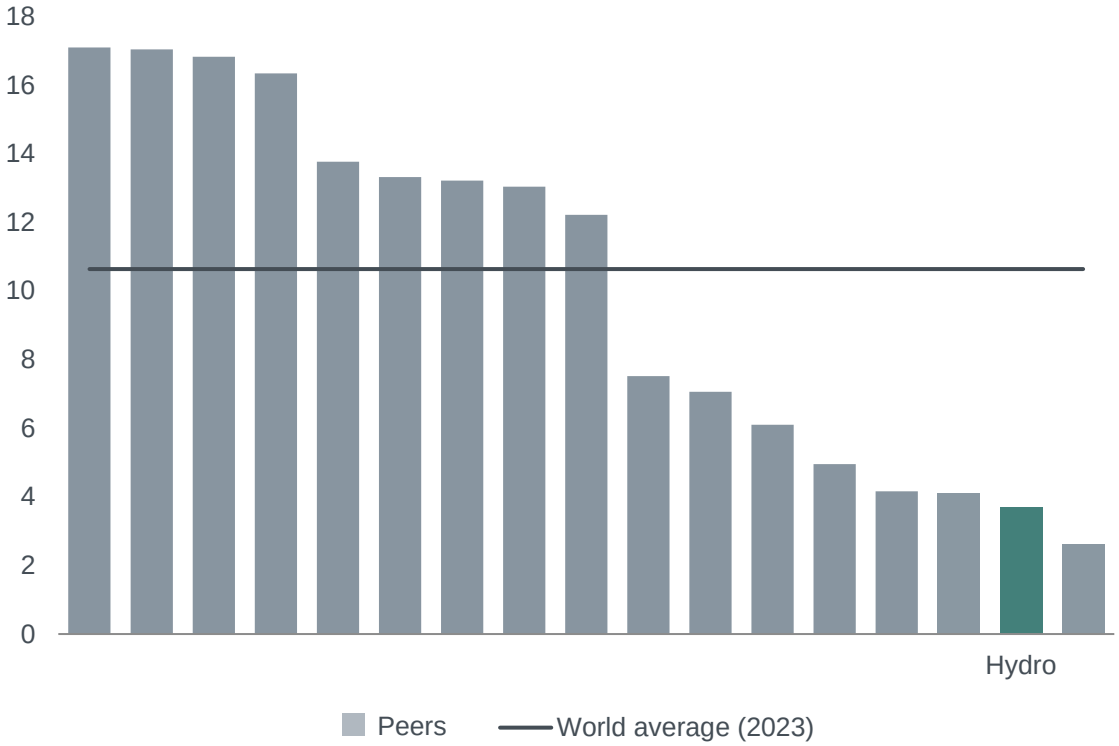
Brazil 460 000 tonnes — 20%

- Albras (100%): 460,000 tonnes
- Hydro owns 51%

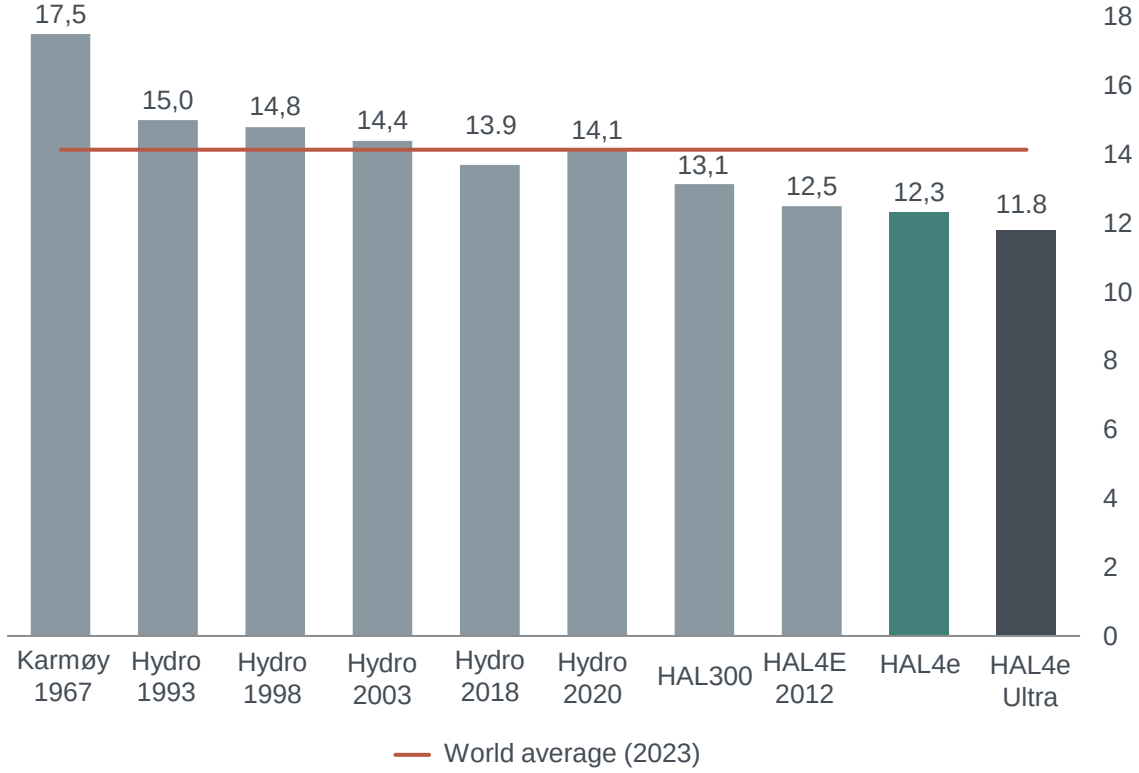
2.3 million mt is consolidated electrolysis capacity, Slovalco and Albras are fully consolidated, Tomago and Alouette are proportionally consolidated and Qatalum is equity accounted. Slovalco based on primary capacity, not production (currently 100% primary production curtailed and lower remelt). 1.0 million mt includes 0.7 mill mt in stand-alone extrusion ingot recyclers and 0.3 mill mt in Alumetal, excluding additional remelt capacity in Primary casthouses.

Low-carbon footprint due to renewable energy base and industry lowest energy consumption

Total emissions, in tonne CO_2/t al



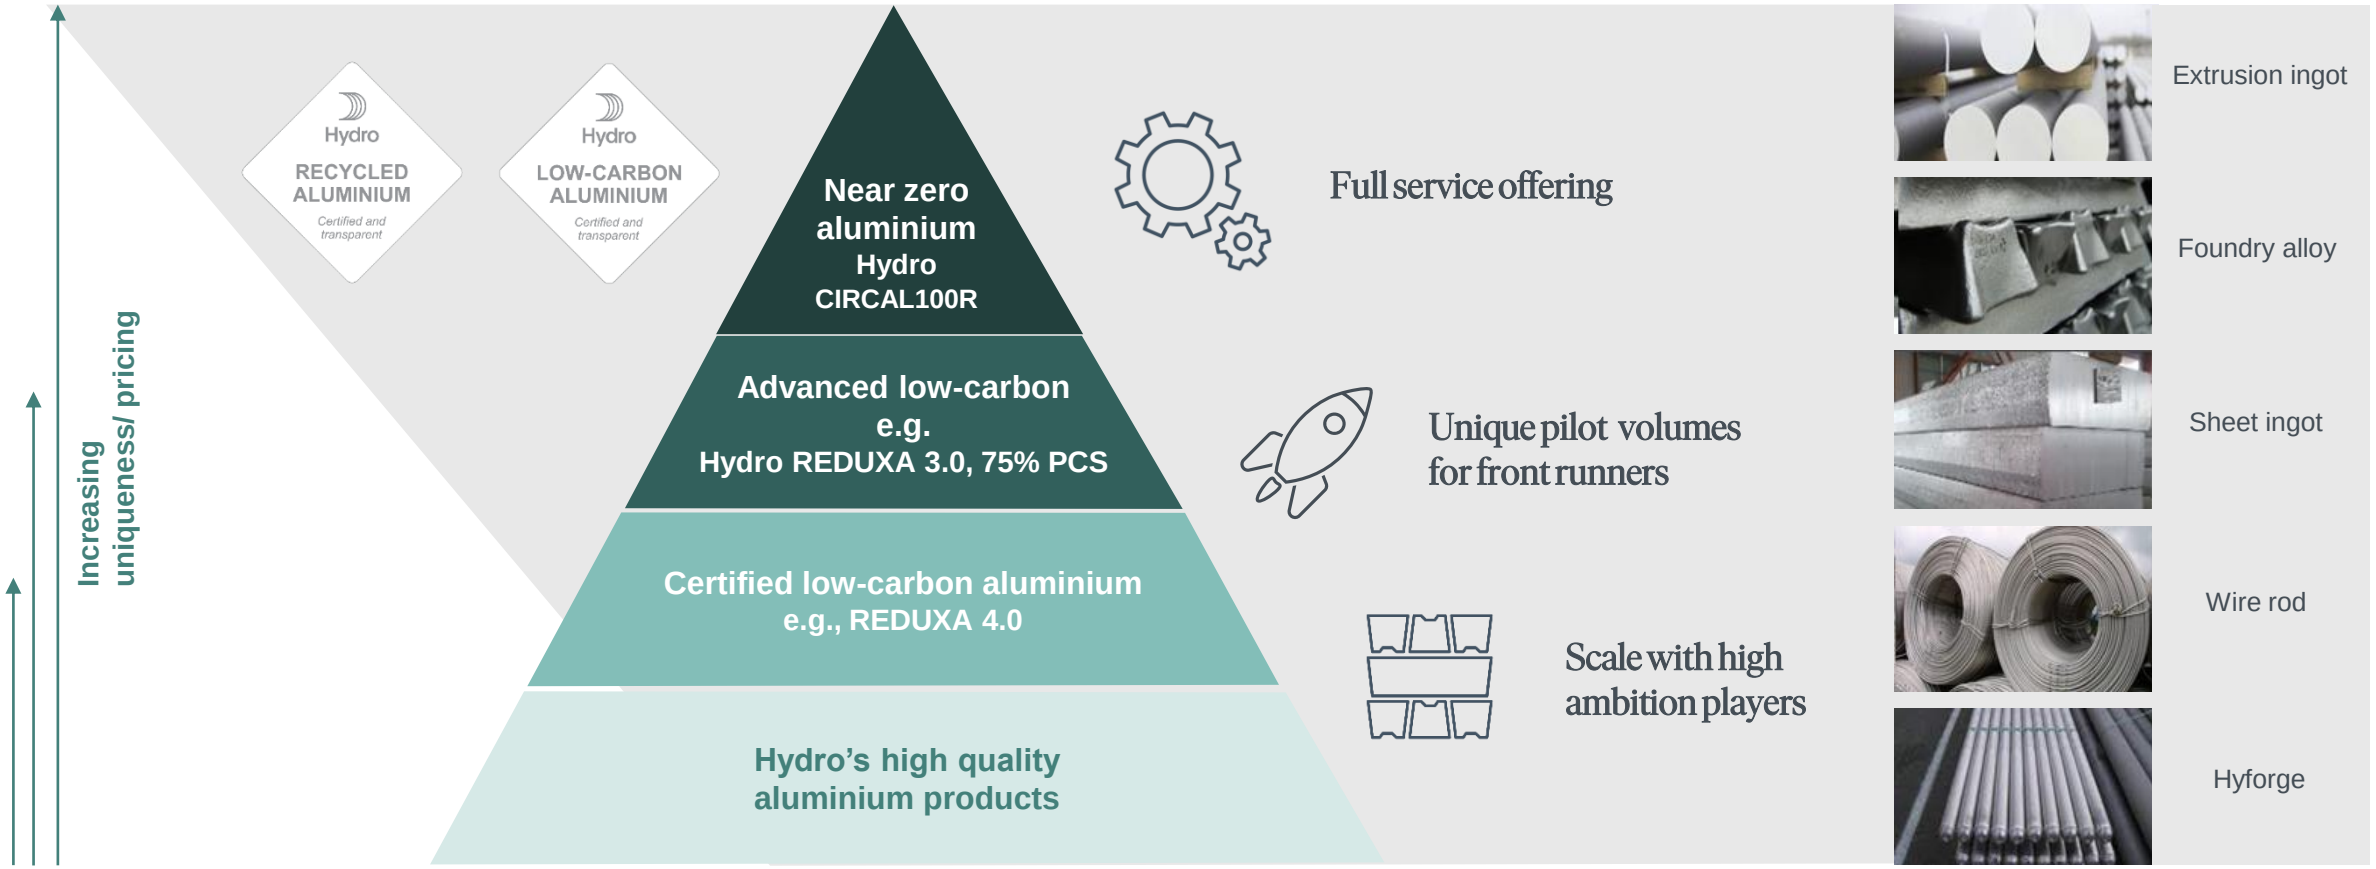
Energy consumption in Hydro smelters[1)], kwh/kg al



Source: CRU and Hydro analysis
1) Hydro's consolidated share

Hydro has a unique value proposition in aluminium

Going to market with a combined offering of primary and recycled aluminium with a full product spectrum and with tailor made alloys is unique to AM

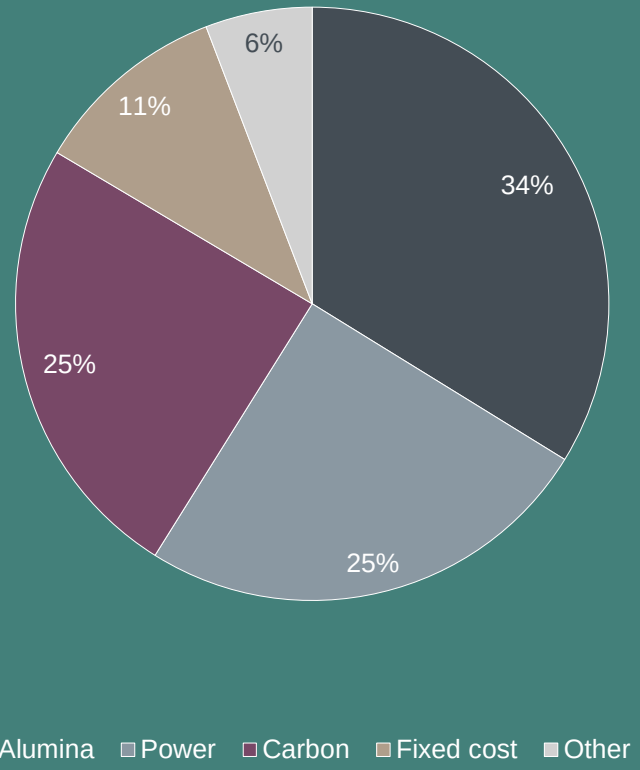


Competitive primary aluminium cash cost

- Primary aluminium cash cost 2023
  - All-in implied primary aluminium cash cost[1,2)] USD 2 225 per mt
  - LME implied primary aluminium cash cost[1,3)] USD 1 750 per mt
- Alumina
  - Purchases based on alumina index ~93%
  - Purchased based on LME link ~7% (only for Qatalum)
- Power
  - Long-term contracts
  - 3/4 of power need from renewable power
  - Contracts with a mix of indexations; inflation, LME, coal, fixed
- Carbon
  - Majority of contracts are based on 1-2 years, quarterly pricing
- Fixed costs
  - Maintenance, labor, services and other
- Other
  - Other direct costs and relining

1) Adjusted EBITDA margin excluding power sales Slovalco, Albras and Norwegian smelter
2) Realized LME aluminium price (incl.strategic hedges) plus premiums minus adjusted EBITDA margin, including Qatalum, per mt primary aluminium sold
3) Realized LME aluminium price (incl.strategic hedges) minus adjusted EBITDA margin, including Qatalum, per mt primary aluminium produced
4) Pie chart based on cost of producing liquid aluminium, not directly comparable to the LME or All-in implied primary aluminium cash cost

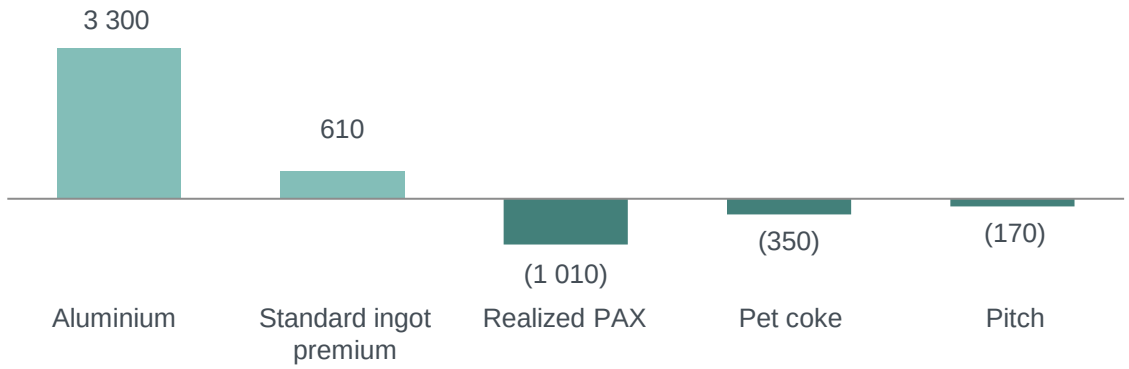
Liquid aluminium cash cost 2023[3)]



Aluminium Metal sensitivities

Annual sensitivities on adjusted EBITDA if +10% in price

NOK million



Currency sensitivities +10%

NOK million	USD	BRL	EUR
AEBITDA	2,880	(280)	(620)

Revenue impact

- Realized price lags LME spot by ~1-2 months
- Realized premium lags market premium by ~2-3 months

Cost impact

Alumina

- ~1.9 tonnes per tonne aluminium
- ~ 2-3 months lag
- Mainly priced on Platts index

Carbon

- ~0.40 tonnes petroleum coke per tonne aluminium, Pace Jacobs Consultancy, 2-3 year volume contracts, quarterly or half yearly pricing
- ~0.08 tonnes pitch per tonne aluminium, CRU, 2-3 year volume contracts, quarterly pricing

Power

- 14.0 MWh per tonne aluminium
- Long-term power contracts with indexations

Annual adjusted sensitivities based on normal annual business volumes. LME 2,250 USD/mt, standard ingot premium (Europe duty paid) 285 USD/mt, PAX 365 USD/mt, fuel oil 840 USD/mt, petroleum coke 395 USD/mt, pitch 925 EUR/mt, caustic soda 385 USD/mt, coal 85 USD/mt, gas (Henry Hub) 2.56 USD/MMBtu, USDNOK 10.50, BRLNOK 2.12, EURNOK 11.41

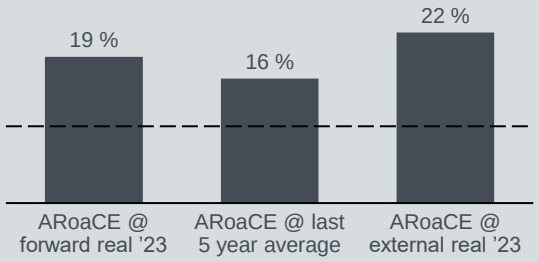
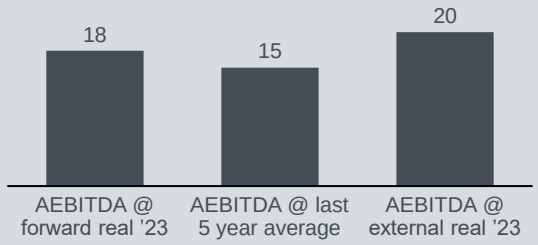
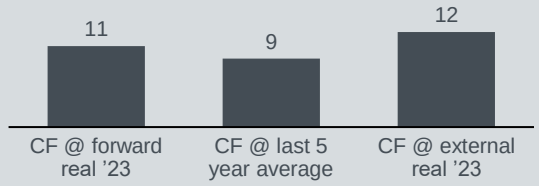
Market scenarios 2030



Market scenarios 2030



Market scenarios 2030



Main further upside drivers

- Positive market and macro developments
- Commercial differentiation, incl. greener brands
- Further recycling growth opportunities
- Portfolio optimization
- Further potential in automation, process control and efficiency, operational excellence

Main downside risks

- Negative market and macro developments, incl. trade restrictions
- Deteriorating relative cost and market positions
- Operational disruptions
- Supply chain disruptions
- Regulatory and country risks, incl. tax

1) Cash flow calculated as EBITDA + tax + long-term sustaining CAPEX
Assumptions and sources behind the scenarios can be found in Additional information
Sources: External scenario is based on CRU price and premium assumptions and S&P Global FX assumptions, with adjustments as specified in the footnotes

Metal Markets

Strong position in value-added casthouse products

- Capitalizing on value-added casthouse products portfolio
- Extensive multi-sourcing system including fully and part-owned primary casthouses and stand-alone remelters
- Flexible sourcing system enabling rapid and cost effective volume adjustments
- Value creation from margin management based on commercial expertise and risk management competence
- Strong market positions in Europe, the U.S. and Asia

Casthouse production

Primary production

Remelting & recycling

Commercial agreements

Extrusion ingot 1.6 million mt		**Leading global position** Unique primary and recycling capacity network
Foundry alloys 0.6 million mt		**Leading global position** Strong capabilities in all automotive segments
Sheet ingot 0.3 million mt		**Leading European position** Well positioned to capture automotive growth
Wire rod 0.1 million mt		**Leading European position** Market attractively supported by copper substitution
Standard ingot 0.3 million mt		**Leading global position** Global flow optimization through key positions

Numbers are based on 2022 Metal Markets sales, including Sales activities of Qatalum, casthouse and remelter production, standard ingot and external sources

Pricing of value-added products

	Smelter	Intermediate product	Casthouse
	Aluminium	Standard ingot	Value added products
			 Extrusion ingot  Foundry alloy  Sheet ingot  Wire rod
US	Traded on LME	• U.S. Midwest - 1020 (in cent per pound)	• Extrusion Ingot – Priced above standard ingot • Foundry Alloy – Priced above standard ingot • Sheet ingot – Priced above standard ingot • Wire rod - Priced above standard ingot
Europe	Traded on LME	• Duty paid IW Rotterdam • Duty unpaid IW Rotterdam	• Extrusion ingot – Priced above LME • Foundry Alloy – Priced partly above standard ingot and partly above LME • Sheet ingot – Priced above standard ingot • Wire rod - Priced partly above standard ingot and partly above LME
Asia	Traded on LME & SHFE	• CIF Japan Premium (MJP) • Singapore In Warehouse • CIF South Korea	• Extrusion ingot – Priced partly above standard ingot and partly above LME • Foundry Alloy – Priced partly above standard ingot and partly above LME • Sheet ingot – Priced partly above standard ingot and partly above LME

Metal Markets earnings drivers

- Recyclers
  - Revenue impact – volume, LME and product premiums
  - Cost impact
    - Scrap and standard ingot premiums above LME
    - Raw material mix
    - Freight cost – proximity to market
    - Energy consumption and prices
- Other main businesses
  - Physical ingot and LME trading
  - Third-party casthouse products
- Results influenced by currency fluctuations and inventory valuation effects
- Adjusted EBITDA for Commercial excl. currency and inventory valuation effects for 2024 expected in the range of 250MNOK to 400MNOK

Adjusted EBITDA excluding currency effects and inventory valuation effect, NOK million[1)]

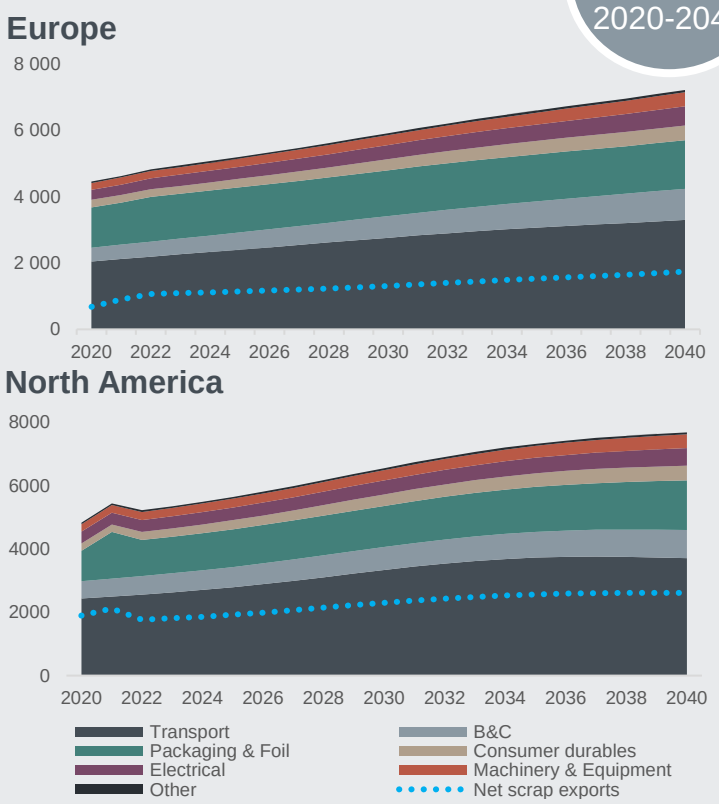
Post-consumer scrap generation is increasing

But multiple hurdles exist for its utilization

Post-consumer scrap recovery

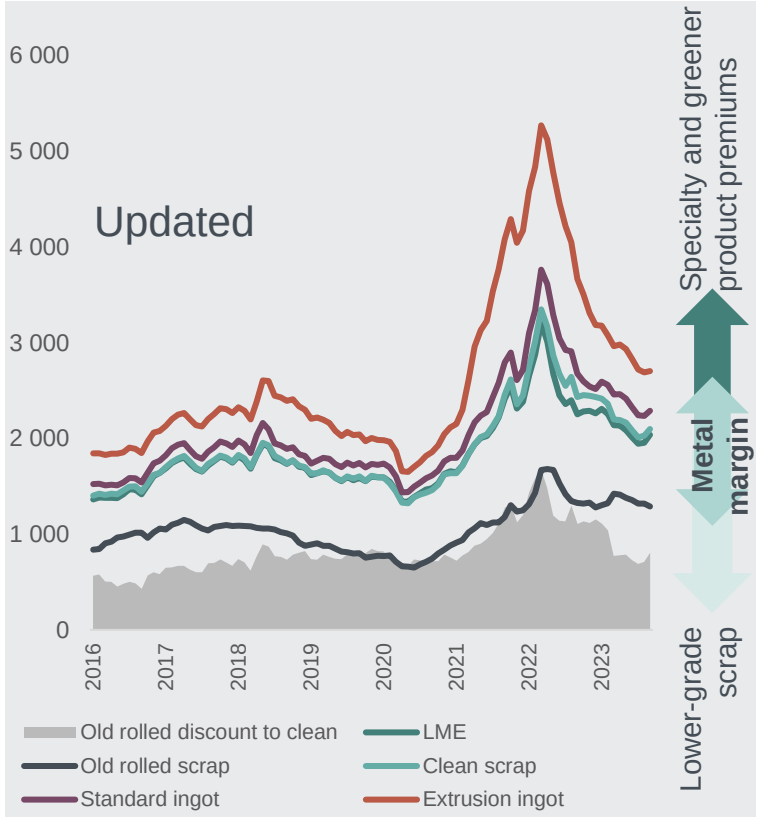
Tonnes ('000)

CAGR 2.4% 2020-2040



Price spread scrap

Clean vs. complex post-consumer scrap, EUR/tonne



Key trends in aluminium recycling

- Growth in recycling and billet capacity pressuring margins on "clean" scrap feedstock
- Large export volumes from Europe and North America to Asia
- Regulatory changes and protectionism measures affecting future scrap market
- Increasing generation and more interest in lower-grade scrap, but multiple challenges:
  - Supply chain complexity
  - Contamination
  - Collection
  - Sorting limitations
  - Logistics

Source: IAI GARC, UNComtrade, Metal Bulletin, Platts, Reuters Ecowin

Mixed scrap types require sorting capabilities and ability to convert to various products

Securing access to the right scrap – key success factor

Low — Need for sorting — High

Megatrends support recycling agenda

Increasing focus on circular economy from both consumers and regulators

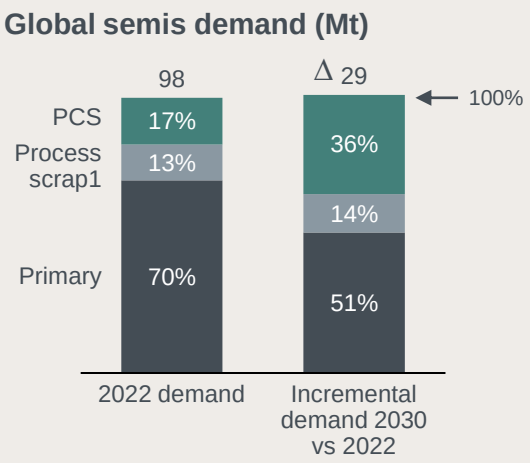
Innovate for circularity

- Process design – closed loops
- Product design – lower material use
- Reuse and refurbish (second life)

Waste to value

- Reduce waste generation
- Reuse and upcycle waste streams to products

Technology



- Capture and recycle products at end-of-life
- Improve scrap sorting
- Increase recycling efficiency
- Technology advancement

Regulatory frameworks

- End-of-life Directive
- EU waste shipment regulation
- Critical raw materials act
- CO_2-regulations

Diversifying and high-grading recycling product portfolio across markets and geographies

Successfully completed organic and inorganic projects in 2023 include:

Cassopolis greenfield recycler, MI, USA

Introducing Hydro CIRCAL, increasing EI market share in the U.S.

- 40kt of PCS per year enabling delivery of similar volumes of Hydro CIRCAL® to the North American market
- Lowest carbon extrusion ingot offering in North America

State-of-the art HyForge line in Rackwitz, Germany

Diversifying portfolio and growing high-margin HyForge capacity

- Ramping-up the HyForge line in Rackwitz Germany
- Forging stock geared towards the automotive industry

Alumetal acquisition

Entering the recycled FA market with Alumetal acquisition

- Advanced sorting capabilities and capacity
- Opportunity to utilize more scrap grades
- Identified synergies of **10-15 MEUR by 2027**

AluSort – JV Hydro & Padnos, USA

Securing access to scrap, industrializing HySort technology in the U.S.

- Invested 4MUSD in a 50:50 JV with scrap-yard operator Padnos in MI, U.S.
- Installing HySort equipment; total capacity ~36 kt p.a.
- Supplying Cassopolis with suitable fractions; marketing the rest externally

Hydro has a proven track record developing recycling capabilities

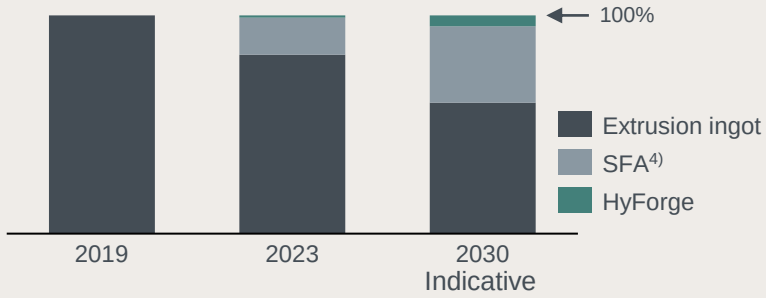
Increasing use of PCS and sorting capacity [1)]

+40%
PCS use
2019 to 2023

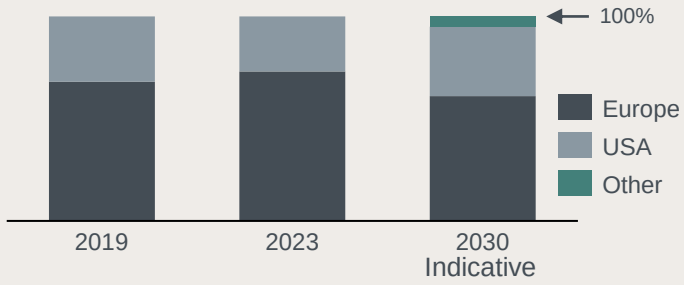
+100 kt
Sorting capacity
2019 to 2023

Diversifying asset and product portfolio[2)]

Recycling product portfolio mix

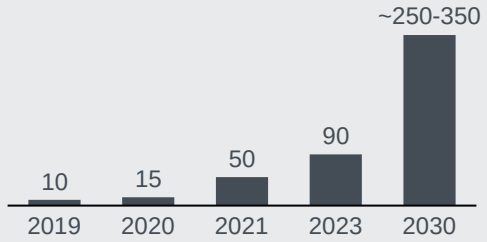


Recycling production by region



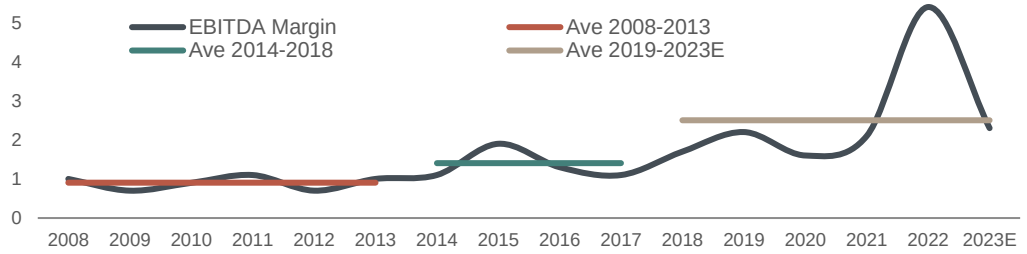
Expanding specialty and greener product offerings[3)]

Increasing CIRCAL 75R capacity
Tonnes (‘000)



Lifting profitability through the cycle

AM Recycling indexed EBITDA margin
USD/tonne (2008 set at 1)



1) Average PCS consumption in the AM extrusion ingot recycling plants. 2) AM global recycling portfolio; 2023 based on Alumetal production since July 1, 2023.
3) Extrusion ingot Hydro CIRCAL capacity in AM and HE recycling plants and remelters, Europe and US. 4) SFA = scrap-based foundry alloy

Stepping up activities across the recycling value chain

Continuing to transform scrap into sustainable solutions for our customers

Scrap sourcing	Sorting	Melting/casting	Products & Commercial
• Strengthen existing and grow new partnerships for upstream positioning • Enhancing use of IT/IS tools for scrap to product optimization	• Increase sorting capacity through investments and partnerships • Rolling out advanced sorting technology (HySort)	• Greenfield / brownfield • New recycling capacity at primary smelters • Process optimization, best practices sharing	• Develop advanced, sustainable products and solutions • New partnerships • Offer recycling friendly alloys (RFAs)

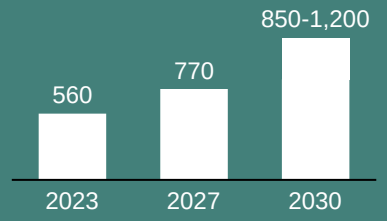
Selected projects in the pipeline adressing key market trends

SFA products for **automotive** e.g. gigacastings, electrical engine housing

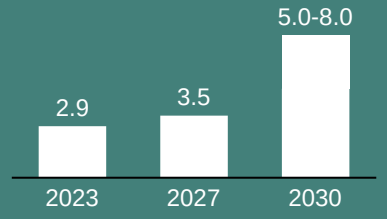
Specialty casthouse equiped to produce advanced products also for automotive; large CIRCAL capacity

Introducing HyForge for **automotive applications** in the US

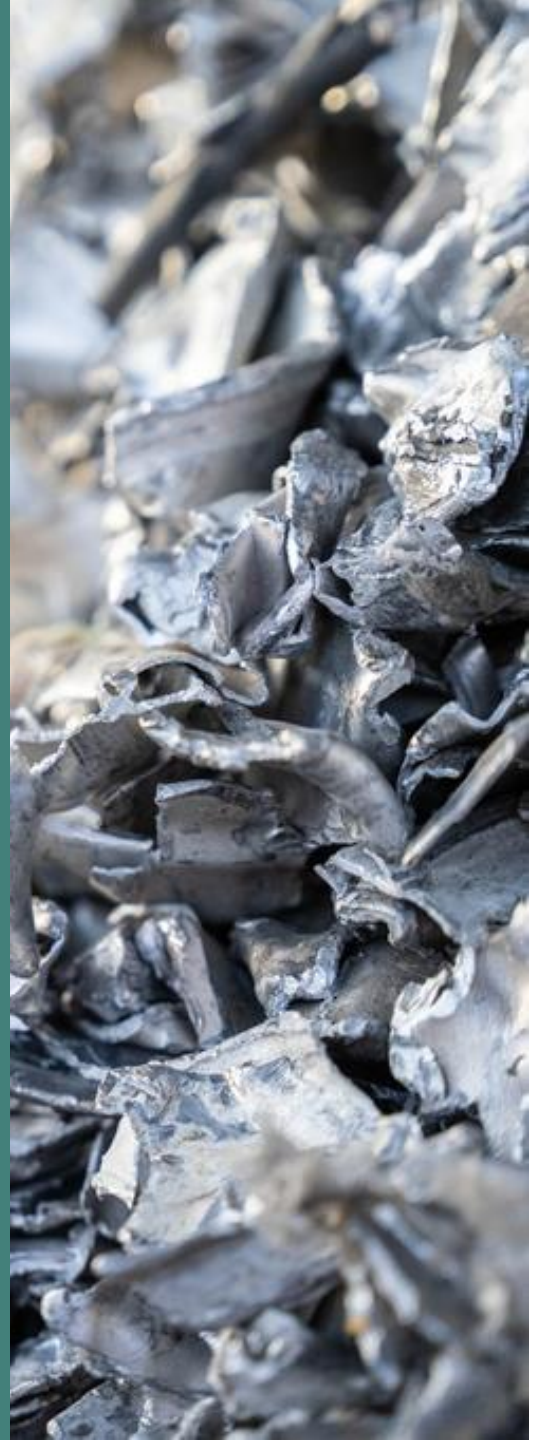
Recycling 2030 ambitions:



850-1,200
kmt PCS capacity

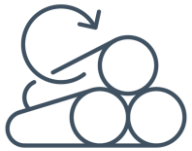


NOK **5-8** billion
EBITDA potential



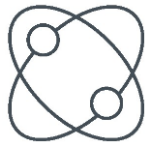
Hydro with competitive advantages in recycling

Hydro



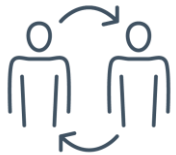
Full value chain with multiple product outlets

- Large recycling asset base in Europe and North America
- Broad range of products – extrusion ingot, sheet ingot, foundry alloys, HyForge, Master alloys
- Ability to utilize and upcycle mixed scrap



Sorting & production technology

- Technical and metallurgical competence
- Production optimization know-how from scrap to product
- Patented HySort technology, in-house R&D



Close customer & supplier relations

- Local presence and market insight in core locations
- Established relationships with scrap suppliers
- Partnerships and close cooperation with customers
- Commercial intelligence and strong value chain positioning

Extrusions

Extrusions – #1 in the global aluminium extrusion industry

Present in

~40

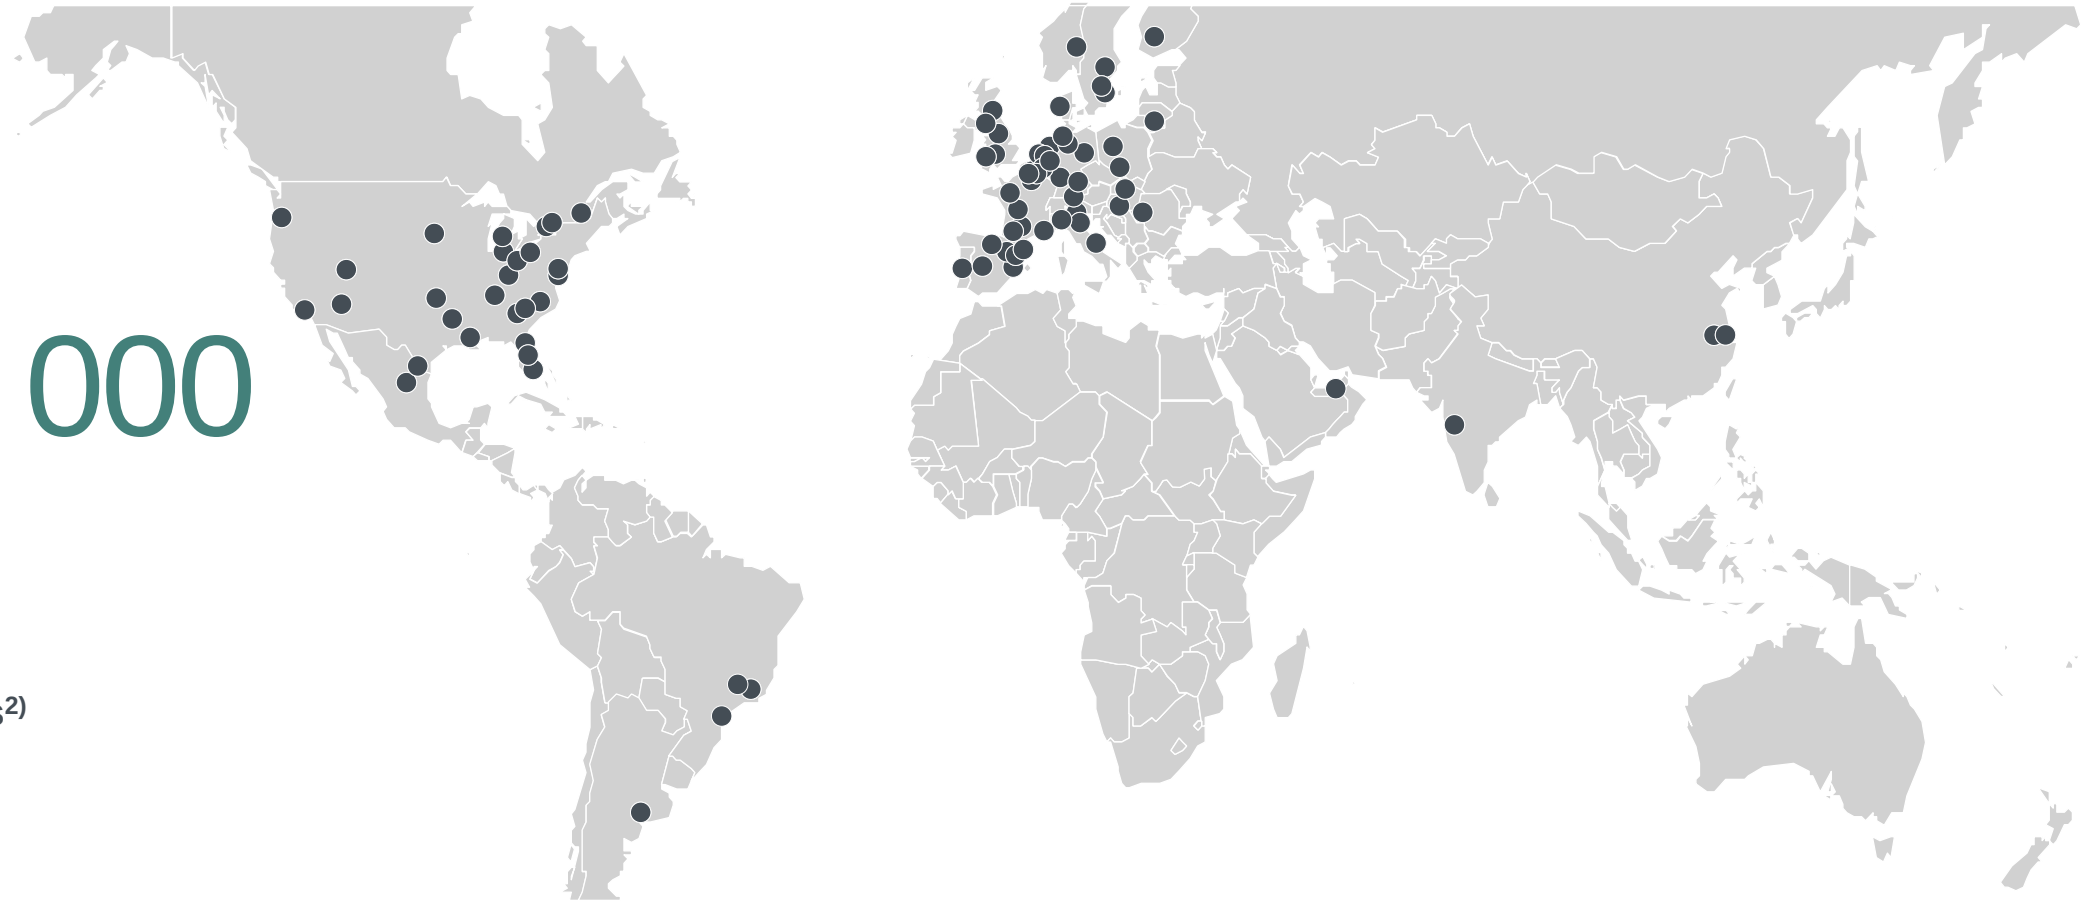
countries

~ 21 000

people [1)]

1.1

Million mt sales[2)]



1) Permanent employees as of end-2023
2) Total sales in 2023

Hydro Extrusions delivering strong EBITDA uplift through targeting high-growth, advanced segments

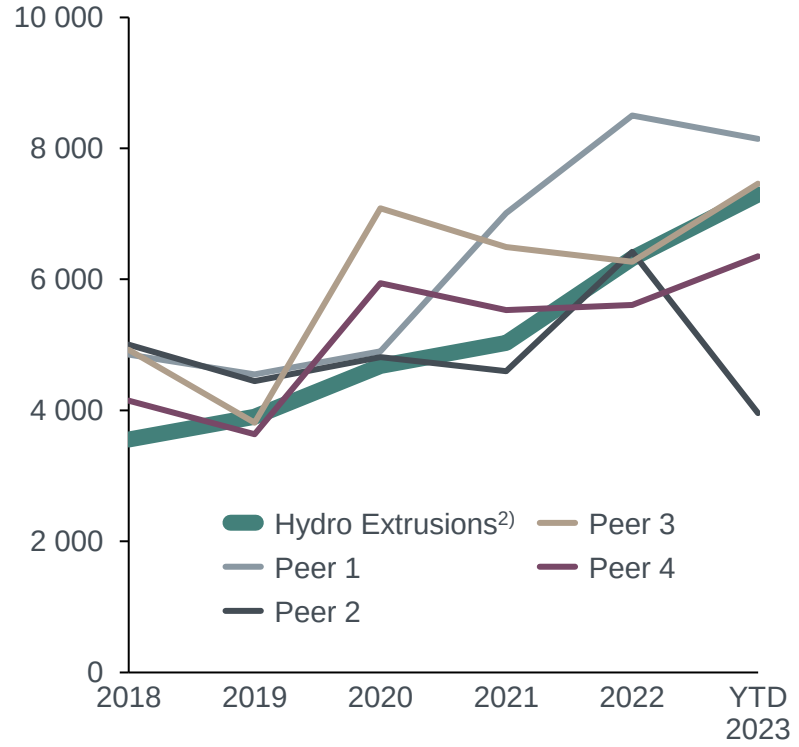
EBITDA per tonne vs peers

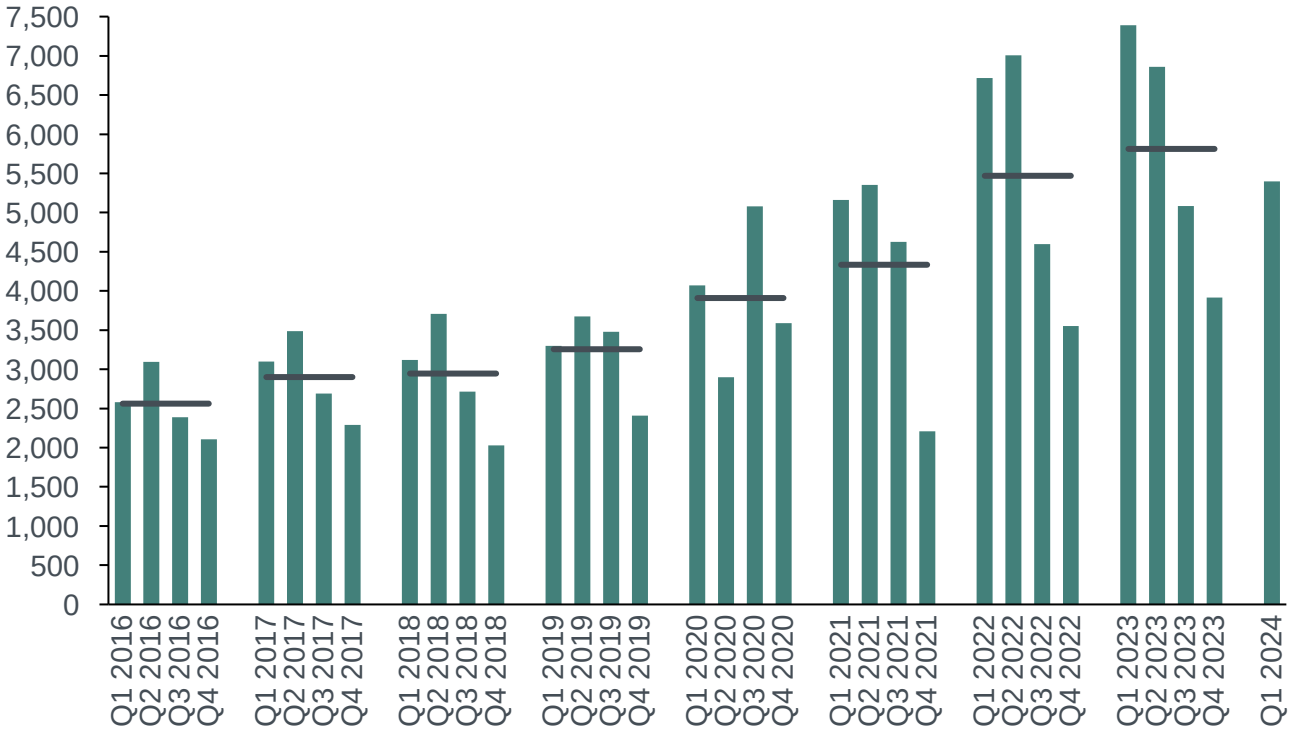
NOK per tonne



1) Heat, ventilation, air conditioners & refrigerators
2) HE EBITDA adjusted for capitalization of dies to make comparable to peers

Extrusions earnings drivers

Adjusted EBITDA per tonne[1], NOK



- Contract structure
  - Margin business based on conversion price
    - LME element passed on to customers
  - Mostly short-term contract, typically ranging from spot to 12 months, few longer term contracts with floating price or hedging in place
- High share of variable costs – high level of flexibility
- Annual seasonality driven by maintenance and customer activity
  - Stronger Q1 and Q2, weaker Q3 and Q4
- Strong focus on increasing value add to customers
- Preferred supplier market position in high-end products

1) Pro-forma figures

Industry trends towards 2030 are favorable for Hydro Extrusions, driven by customer needs and segment growth

Opportunity to leverage Hydro Extrusions' strengths increases as target segments develop

Customer needs

- As industries and applications mature, customers demand more developed solutions
- Value added offerings
- New, R&D driven solutions
- Customers will partner with suppliers providing new and advanced solutions, e.g., low-carbon, high R/C content, sustainably produced solutions

Segment growth

- More growth expected in value added product and solutions area rather than "commodities"
- Attractive segments with 5-10% annual growth
- Key growth segments include Automotive / E-mobility and solar / Renewables / Big & Wide Rail

HE capabilities

- Strong innovative capacity to provide high-quality advanced solutions
- Developed R&D position that can be further enhanced
- Head start vs competition in sustainability area
- Size, geographical coverage and advanced capabilities to be relevant in differentiated segments

Hydro Extrusions will leverage opportunities from greener transition to strengthen market positions

Secular growth drivers in key segments

Automotive CAGR 2022-30:

8 - 10%

Solar in EU CAGR 2022-30:

10 - 15%

Copper substitution potential, HVAC&R by 2030, million tonnes:

0.6

HE positioning and growth ambitions

- Strong global positions, long term relationships with major automotive OEMs
- Proven capabilities, innovation and sustainability as key competitive levers
- Increase share of direct OEM supply and long-term contracts
- Investment projects under execution globally

- HE with strong value offering, including surface treatment and low-carbon aluminium solutions
- Solar mounting systems fit well on existing 7-9 inch presses
- Projects in pipeline to increase capacity

- HVAC&R customers with production in North America and China
- Customer projects with proven solutions for replacing copper with aluminium
- Grow capacity and increase customer solutions

Source: Ducker Group, CRU, BNEF, Hydro analysis

Critical growth projects under execution, maturing projects to enable profitable growth

Further strengthening flagship plants in the portfolio, leveraging key trends

Key trends

- Sustainable products with low-carbon footprint
- Recyclability and keeping materials “in the loop”
- Greener energy sourcing

- E-mobility
- Light-weighting of vehicles

- Customer collaboration: high level of service, tailored solutions, short lead times
- Proximity as clear competitive advantage

Project under execution

Project capacity growth since 2021

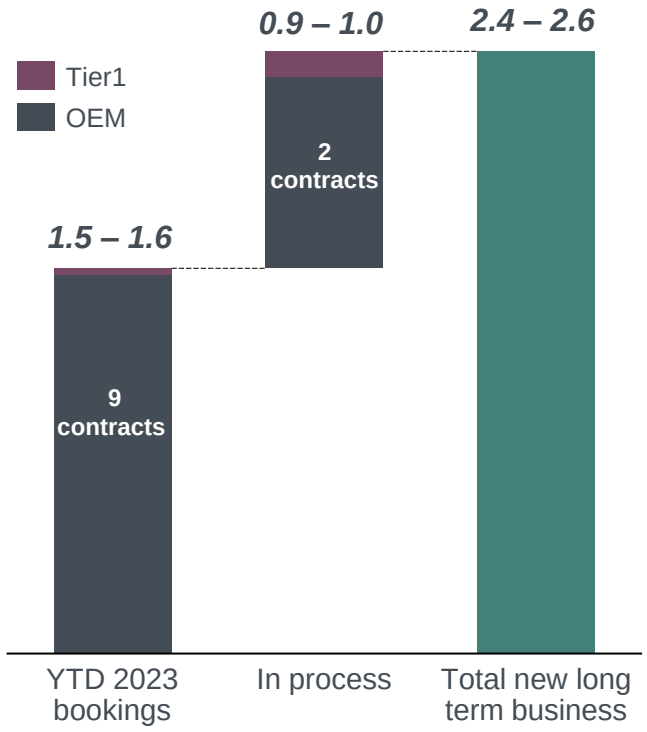
Capacity added	Growth[1)]
~250.000 tonnes of recycling capacity	+ 20%
~45.000 tonnes of automotive press capacity	+15%
~70.000 tonnes of other press capacity	+ 5%

1) Compared to base capacity 2021

Significant automotive growth business last quarters

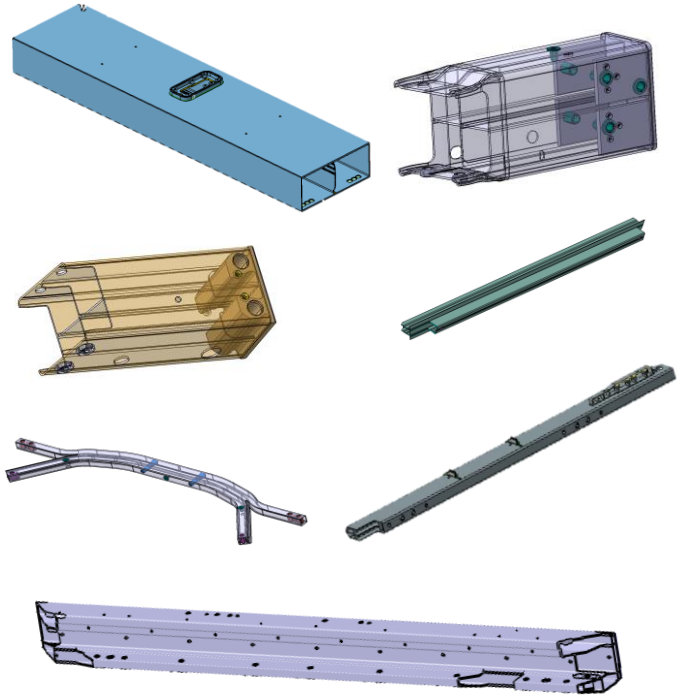
Record levels of OEM sole supply contracts

(Revenue in BEUR)



Partnerships with large OEMs

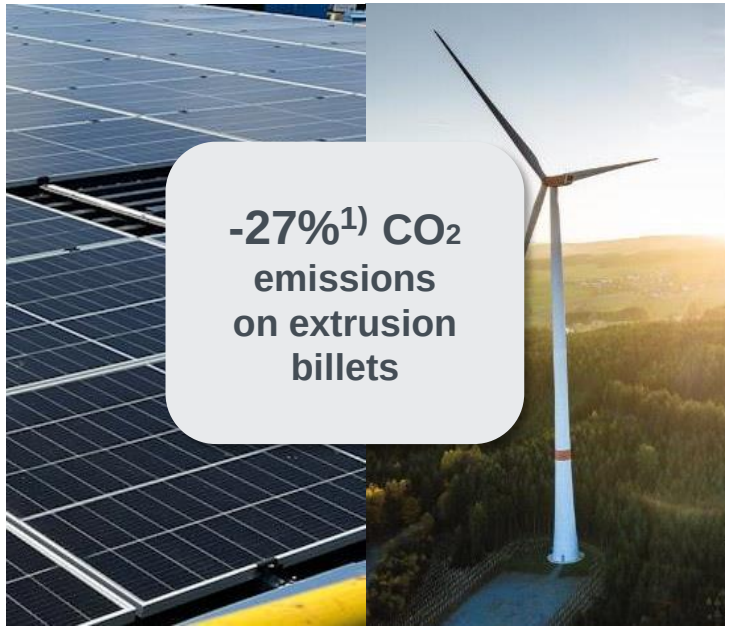
Advanced offering of added value activities and fabrication services



Across geographies and units

Reducing own emissions and helping customers improve their products' sustainability

Greener sourcing



-27%[1)] CO_2 emissions on extrusion billets

Greener production

-24%[1] CO_2 direct/ indirect emissions

Reduce water usage by 30%[2)] and waste generation by 20%[2)]

Zero hazardous landfill by 2025

Greener products

Reduce own emissions

Help customers improve their products sustainability

Confirm and improve with labels and certifications

1) Baseline 2018. 2) Baseline 2019

Reducing own emissions and helping customers improve their products' sustainability towards 2030

Greener sourcing

Greener Sweden
Pilot project towards net-zero

Renewables in the U.S.
Spanish Fork plant fully solar powered

Greener production

PV-powered press
Solar powered press in Poland

Hydrogen-fueled recycling
World's first batch produced in Spain

Greener products

Shaping the market
First project with Hydro CIRCAL 100R

Greener partnerships
Partnering with customers and others

Customers from all industries partnering with Hydro Extrusions to make greener products

VELUX®

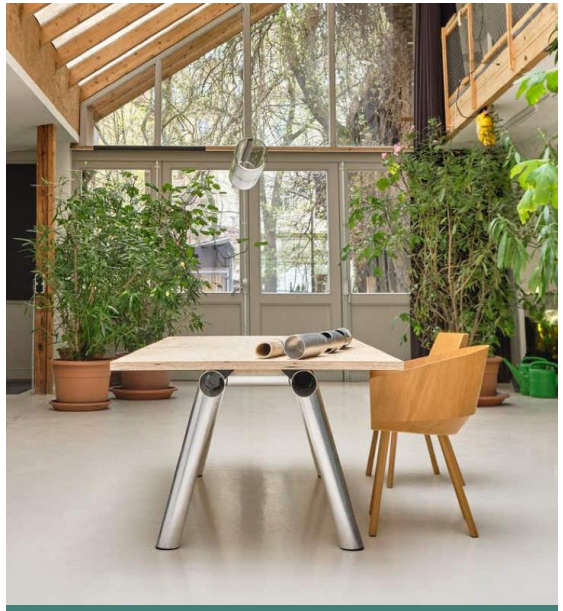
Partnering to cut carbon emissions from its value chain in half by 2030

cake

Cleanest Dirt Bike Ever project to remove emissions from production by 2025

Schweizer

Solar panel systems made from low-carbon aluminium extrusions



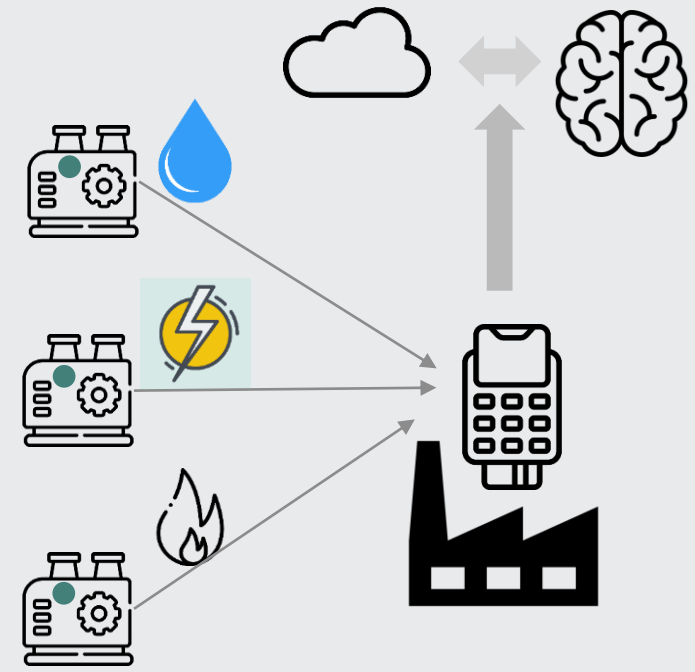
HAY

Light and flat-packed BOA conference tables made with Hydro CIRCAL

Digitalization, AI and automation

Key levers to improve performance and profitability

AMR = Automatic Meter Reading



● = *Sensors*

AMR = Sensors with real-time tracking of energy, water, gas consumption and vibration at machines in plants

Value contribution

- Using AI / machine learning / dash-boards to identify “irregularities”
  - Benchmark between machines and products to drive improvements & reduce waste / consumption
- Peak-shaving / improved production planning
- Preventive maintenance through vibration / consumption patterns
- Traceability through connected systems

Automation

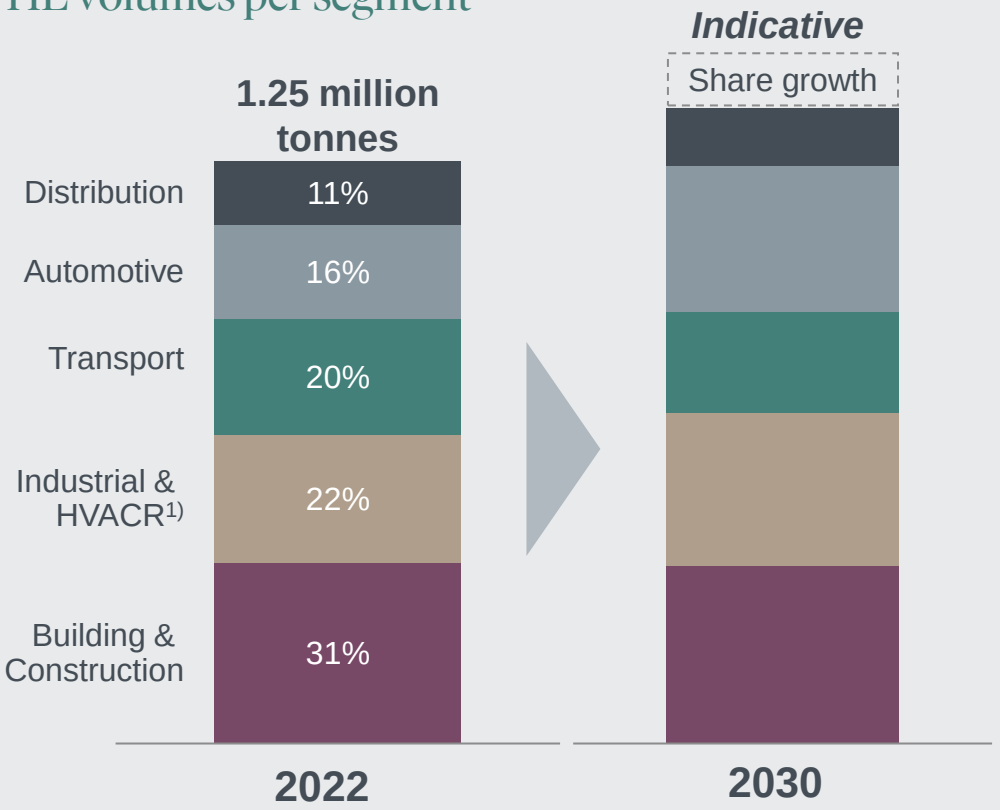
- PT Taicang Fabrication – reducing 95 FTEs through Automation & EBS[1)] (>20% of work-force)
  - Ergonometric, quality, safety and finance
- Automatic quality controls enable delivering millions of parts without quality issues

1) Extrusion Business System

HE increasing profitability towards 2030 through uplift from growth projects and underlying improvements

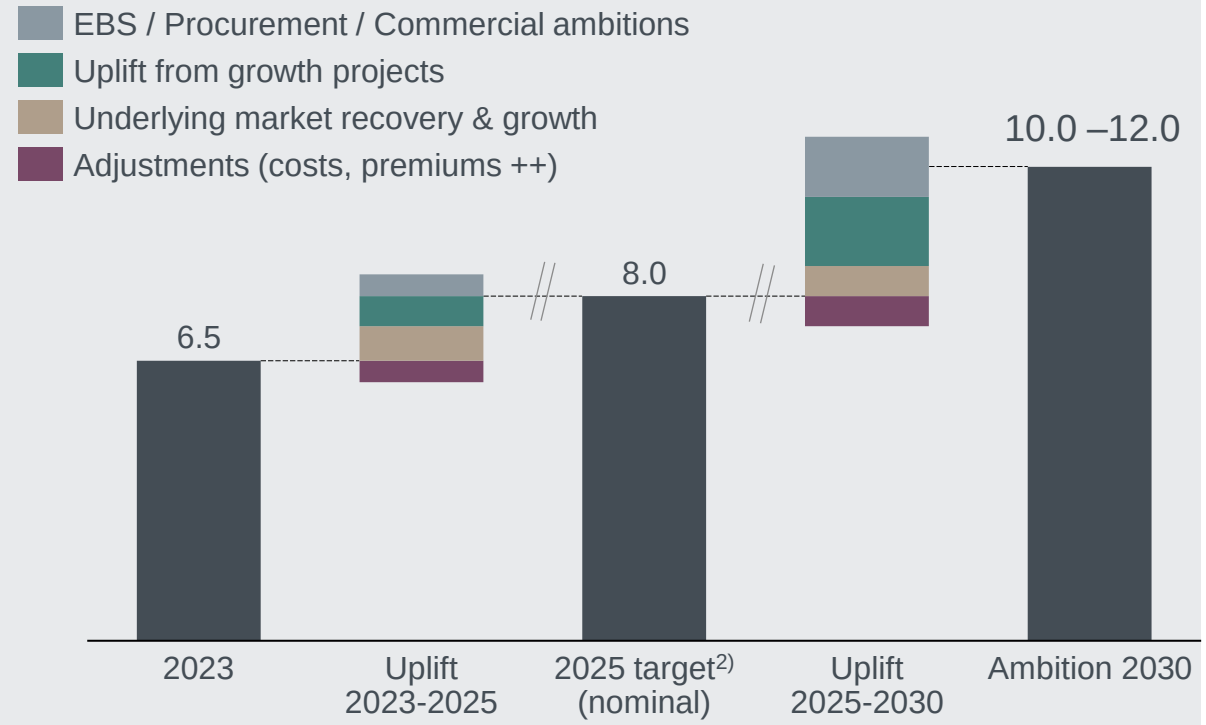
Growing market share in dedicated segments, further operational and commercial improvements

HE volumes per segment



HE EBITDA ambitions

NOK billion (real 2023)



1) Heat, ventilation, air conditioners & refrigerators
2) Target of 8 BNOK in 2025 in nominal terms as communicated in 2021. Range target 2030 in real terms

Hydro Extrusions 2030 strategic direction

- Growing with the **underlying markets**
- Growing in non-commoditized segments fitting with HE's capabilities
- Continue to compete based on capabilities and service

\+ **Market share growth** ambition in high-growth, profitable segments

- Investments to support capabilities and **ability to compete through high service levels**
- **Press and fabrication capacity, value added services and recycling**

- **Sustainability** giving **commercial** opportunities
- **Segmentation** and improved **greener offerings** as key levers

- Increased **digitalization** throughout value-chain
- **Standardization** will generate value through the value-chain – from understanding profit to driving procurement and reducing energy consumption

Capital return dashboard for Extrusions

NOK billion

Main further upside drivers

- Selective profitable growth including larger projects
- Continuous portfolio review and optimization
- Operating and fixed cost optimization
- Positive market and macro developments

Main downside risks

- Negative market and macro developments, incl. trade restrictions
- Inflation pressure
- Loss of large customer contracts
- Supply chain disruptions
- Regulatory and country risks

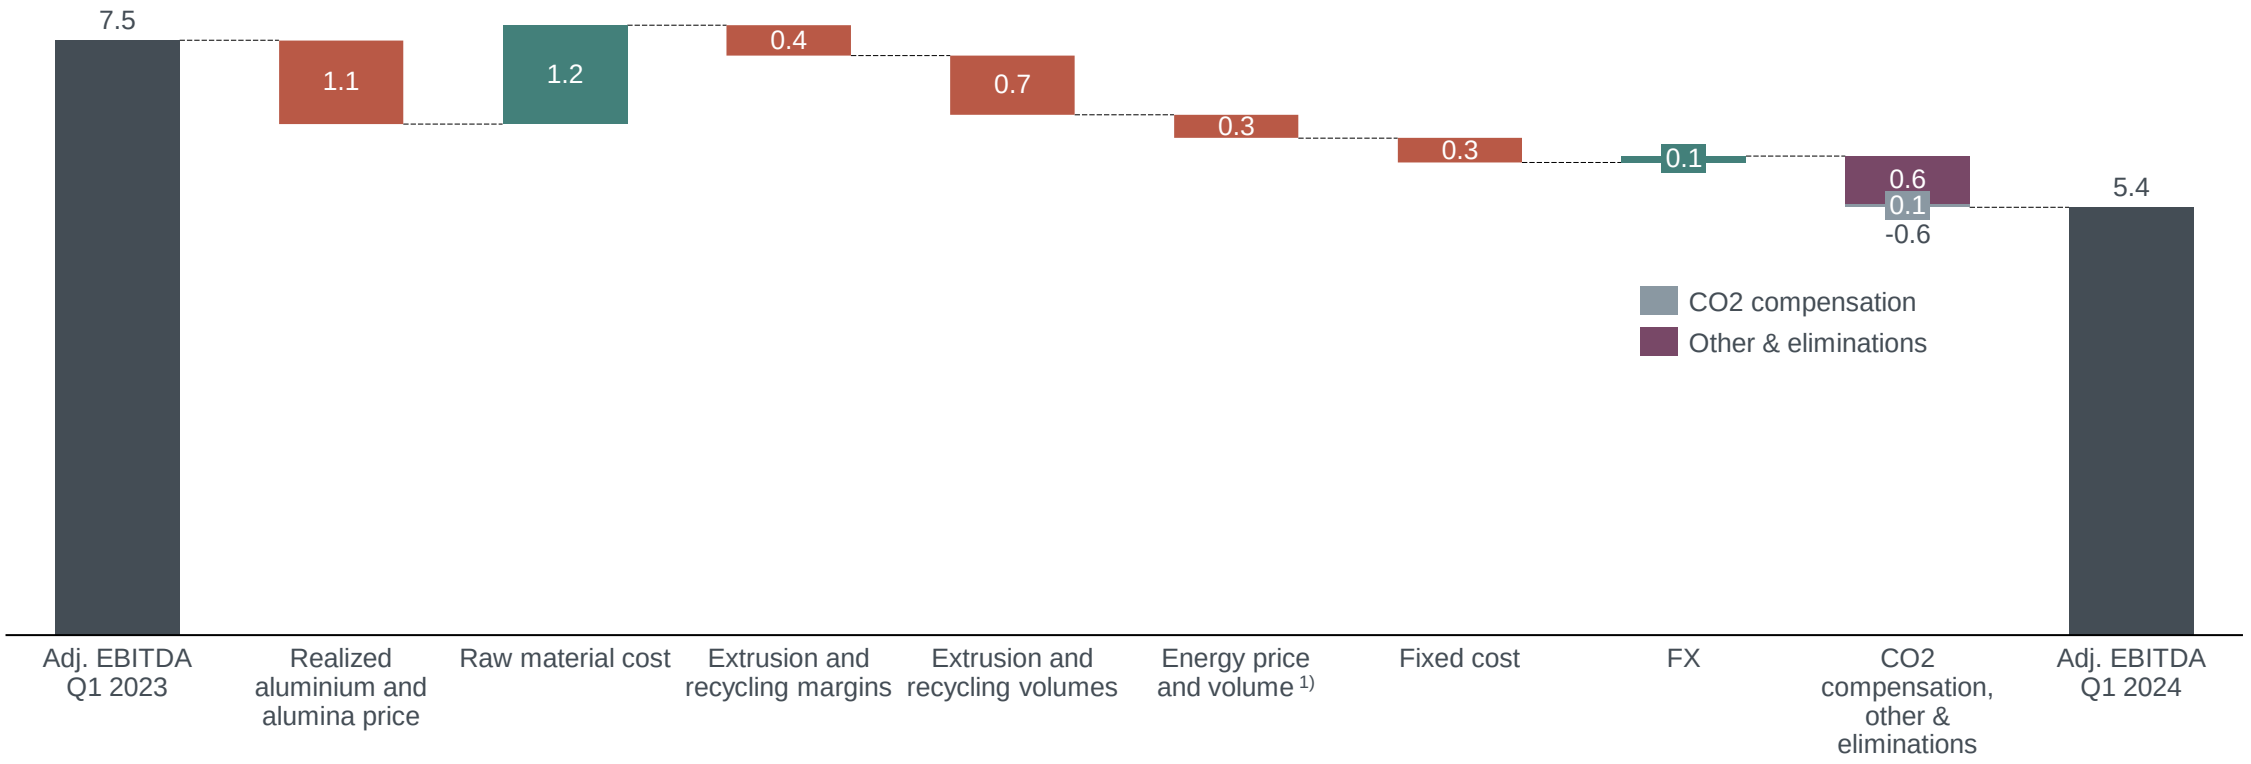
1) Cash flow calculated as EBITDA + tax + long-term sustaining CAPEX
Assumptions and sources behind the scenarios can be found in Additional information

Hydro

Additional information

Adj. EBITDA down on lower prices and Extrusion results, partly offset by lower raw material cost

Q1 2024 vs Q1 2023



Note: 1) Excluding Energy loss on buy-back contract with AM

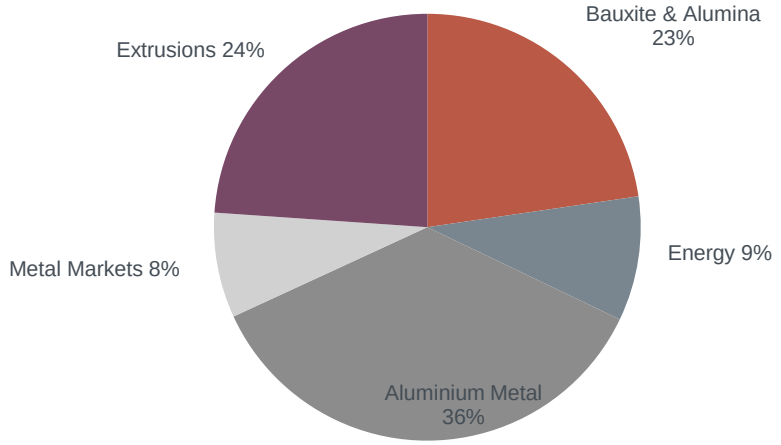
Capital employed – upstream focus

NOK million	March 31 2024
Hydro Bauxite & Alumina	28 780
Hydro Energy	11 958
Hydro Aluminium Metal	45 690
Hydro Metal Markets	10 103
Hydro Extrusions	30 332
Other and Eliminations	(1 221)
Total	**125 642**



Graph excludes BNOK (1.2) in capital employed in Other and Eliminations

1) RoaCE at business area level is calculated using 25% tax rate. For Hydro Energy, 50% tax rate is used for 2023, 40% for 2022 and 2021, 80% for 2020 and 2019, 70% for 2018, and 65% for 2017

2) Hydro Energy reported RoaCE for 2020 higher than previous years due to the Lyse transaction

3) Hydro Extrusions reflected as 50% equity accounted investment Q1-Q3 2017 and fully consolidated from Q4 2017

4) Realized LME price minus Adjusted EBITDA margin (incl. Qatalum) per mt primary aluminium produced. Includes net earnings from primary casthouses
5) Realized all-in price minus Adjusted EBITDA margin (incl. Qatalum) per mt primary aluminium sold. Includes net earnings from primary casthouses
6) Total sales replaces previous casthouse sales due to change of definition
7) Includes external and internal sales from primary casthouse operations, remelters and third-party Metal sources
8) Adjusted EBITDA divided by total revenues

Assumptions behind scenarios in profitability roadmaps

Scenarios are not forecasts, but illustrative earnings, cash flow and return potential based on sensitivities

- Starting point – AEBITDA Q3-23 LTM
- Cash flow calculated as AEBITDA less EBIT tax and long-term sustaining capex, less lease payments and interest expenses for the Hydro Group
  - Tax rates: 25% for business areas, 40% for Energy, 28% (LTM) for Hydro Group
- ARoaCE calculated as AEBIT after tax divided by average capital employed
  - Average capital employed assumed to increase with growth capex and return-seeking capex above LT sustaining CAPEX 2024-2026
- The actual earnings, cash flows and returns will be affected by other factors not included in the scenarios, including, but not limited to:
  - Production volumes, raw material prices, downstream margin developments, premiums, inflation, currency, depreciation, taxes, investments, interest expense, competitors' cost positions, and others
- External scenario is based on CRU price and premium assumptions and S&P Global FX assumptions, with adjustments as specified in the footnotes

Price and FX assumptions

Assumptions used in scenarios	Q3 2023 LTM	2024 forward real	2030		
			Forward real 2023	Last 5 year average	CRU / S&P Global real 2023
LME, USD/mt	2,240	2,240 (deflated by 2.5%)	2,300 (deflated by 2.5%)	2,180	2,560 (deflated by 2.5%)
Realized premium, USD/mt	490	380[1)]	380[1)]	430	570[4)] (deflated by 2.5%)
PAX, USD/mt	350	320 (deflated by 2.5%)	340[2)] (deflated by 2.5%)	330	380 (deflated by 2.5%)
Caustic soda, USD/mt	650	320[1)]	320[1)]	430	410 (deflated by 2.5%)
Coal, USD/mt	150	110 (deflated by 2.5%)	100[3)] (deflated by 2.5%)	130	100[7)] (deflated by 2.5%)
